Legal information

Warning concept

This manual contains information which you must observe to ensure your safety as well as to avoid material damage. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to equipment damage have no safety alert symbol. Depending on the hazard level, warnings are indicated in a descending order as follows:

 DANGER
indicates that death or serious injury will result if proper precautions are not taken.
 WARNING
indicates that death or serious injury could result if proper precautions are not taken.
 CAUTION
indicates that minor injury can result if proper precautions are not taken.
NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one level of danger is simultaneously applicable, the warning notice for the highest level is used. A notice warning of injury with a safety alert symbol may also include a warning relating to property damage.

Qualified personnel

The product/system described in this documentation may only be operated by **personnel qualified** for the specific task in accordance with the relevant documentation for the specific task, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

 WARNING
Siemens products are only permitted to be used for the applications listed in the catalog and in the associated technical documentation. If third-party products and components are used, then they must be recommended or approved by Siemens. These products can only function correctly and safely if they are transported, stored, set up, mounted, installed, commissioned, operated and maintained correctly. The permissible ambient conditions must be adhered to. Notes in the associated documentation must be observed.

Trademarks

All names identified with ® are registered trademarks of Siemens AG. Any other names used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of liability

We have checked the contents of this publication for consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. The information given in this document is reviewed at regular intervals and any corrections that might be necessary are made in the subsequent editions.

Preface

SINAMICS documentation

The SINAMICS documentation is structured according to the following categories:

- General documentation/catalogs
- Manufacturer/service documentation

Additional information

Information on the following topics is available under the link:

- Ordering documentation / overview of documentation
- Additional links to download documents
- Using documentation online (browse and search in manuals/information).

<http://www.siemens.com/motioncontrol/docu>

My Documentation Manager

Information on how to produce individual contents for your own machine documentation based on Siemens contents is available under the link:

<http://www.siemens.com/mdm>

Training

Information about SITRAIN (Siemens Training on products, systems and solutions for automation) is available under the following link:

<http://www.siemens.com/sitrain>

FAQs

You can find Frequently Asked Questions in the Service&Support pages under Product Support:

<http://support.automation.siemens.com>

SINAMICS

You can find information on SINAMICS at:

<http://www.siemens.com/sinamics>

Usage phases and their tools/documents (as an example)

Target group

This documentation addresses machine manufacturers, commissioning engineers, and service personnel who use SINAMICS.

Benefits

This documentation contains comprehensive information about parameters, function diagrams and faults and alarms required to commission and service the system.

This manual should be used in addition to the other manuals and tools provided for the product.

Standard scope

The scope of the functionality described in this document can differ from the scope of the functionality of the drive that is actually supplied.

- Other functions not described in this documentation might be able to be executed in the drive system. However, no claim can be made regarding the availability of these functions when the equipment is first supplied or in the event of servicing.
- Functions that are not available in a particular product version of the drive system may be described in the documentation. The functionalities of the supplied drive system should only be taken from the ordering documentation.
- Supplements or changes made by the machine manufacturer must be documented by the machine manufacturer.

For reasons of clarity, this documentation does not contain all of the detailed information on all of the product types. This documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

Search aids

The following aids are provided to help you locate information in this manual:

1. Table of contents
 - Table of contents for the complete manual (Page 9)
 - Table of contents for function diagrams (Page 1147)
2. List of abbreviations (Page 2021)
3. References (Page 2030)
4. Index (Page 2037)

Technical Support

Country-specific telephone numbers for technical support are provided on the Internet at:

<http://www.siemens.com/automation/service&support>

Compliance with the General Data Protection Regulation

Siemens respects the principles of data protection, in particular the data minimization rules (privacy by design).

For this product, this means:

The product does not process neither store any person-related data, only technical function data (e.g. time stamps). If the user links these data with other data (e.g. shift plans) or if he stores person-related data on the same data medium (e.g. hard disk), thus personalizing these data, he has to ensure compliance with the applicable data protection stipulations.

Fundamental safety instructions

Content

1.1	General safety instructions	12
1.2	Warranty and liability for application examples	12
1.3	Industrial security	13

1.1 General safety instructions

 WARNING
Danger to life if the safety instructions and residual risks are not observed
If the safety instructions and residual risks in the associated hardware documentation are not observed, accidents involving severe injuries or death can occur.
<ul style="list-style-type: none">• Observe the safety instructions given in the hardware documentation.• Consider the residual risks for the risk evaluation.

 WARNING
Malfunctions of the machine as a result of incorrect or changed parameter settings
As a result of incorrect or changed parameterization, machines can malfunction, which in turn can lead to injuries or death.
<ul style="list-style-type: none">• Protect the parameterization (parameter assignments) against unauthorized access.• Handle possible malfunctions by taking suitable measures, e.g. emergency stop or emergency off.

1.2 Warranty and liability for application examples

The application examples are not binding and do not claim to be complete regarding configuration, equipment or any eventuality which may arise. The application examples do not represent specific customer solutions, but are only intended to provide support for typical tasks. You are responsible for the proper operation of the described products. These application examples do not relieve you of your responsibility for safe handling when using, installing, operating and maintaining the equipment.

1.3 Industrial security

Note

Industrial security

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions only represent one component of such a concept.

The customer is responsible for preventing unauthorized access to its plants, systems, machines and networks. Systems, machines and components should only be connected to the enterprise network or the internet if and to the extent necessary and with appropriate security measures (e.g. use of firewalls and network segmentation) in place.

Additionally, Siemens' guidance on appropriate security measures should be taken into account. For more information about industrial security, please visit:

Industrial security (<http://www.siemens.com/industrialsecurity>).

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends to apply product updates as soon as available and to always use the latest product versions. Use of product versions that are no longer supported, and failure to apply latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed at:

Industrial security (<http://www.siemens.com/industrialsecurity>).

WARNING

Unsafe operating states resulting from software manipulation

Software manipulations (e.g. viruses, trojans, malware or worms) can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- Keep the software up to date.
- Incorporate the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation or machine.
- Make sure that you include all installed products into the holistic industrial security concept.
- Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.

Parameters

2

Content

2.1	Overview of parameters	16
2.2	List of parameters	34
2.3	Parameters for data sets	1121
2.4	Parameters for write protection and know-how protection	1139

2.1 Overview of parameters

2.1.1 Explanation of the parameter list

Basic structure of the parameter descriptions

The data in the following example has been chosen at random. The table below contains all the information that can be included in a parameter description. Some of the information is optional.

The "List of parameters (Page 34)" has the following structure:

----- **Start of example** -----

pxxxx[0...n]	BICO: Full parameter name / abbreviated name			
Drive object (function module)	Can be changed: C1(x), C2(x), U, T	Calculated: CALC_MOD_REG	Access level: 2	
	Data type: Unsigned32 / Integer16	Dyn. index: CDS, p0170	Func. diagram: 8070	
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505	
	Not for motor type: ASM	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [Nm]	10.00 [Nm]	0.00 [Nm]	
Description:	Text			
Value:	0: Name and meaning of value 0 1: Name and meaning of value 1 2: Name and meaning of value 2 etc.			
Recommendation:	Text			
Index:	[0] = Name and meaning of index 0 [1] = Name and meaning of index 1 [2] = Name and meaning of index 2 etc.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Name and meaning of bit 0	Yes	no
	01	Name and meaning of bit 1	Yes	no
	02	Name and meaning of bit 2 etc.	Yes	no
				FP 8060
				8065
Dependency:	Text Refer to: pxxxx, rxxxx Refer to: Fxxxx, Axxxx			
Danger:	Warning:	Caution:	Safety notices with a warning triangle	
				
Notice:	Safety notice without a warning triangle			
Note:	Information that might be useful.			

----- **End of example** -----

The individual pieces of information are described in detail below.

pxxxx[0...n] Parameter number

The parameter number is made up of a "p" or "r", followed by the parameter number and the index (optional).

Examples of the representation in the parameter list:

- p... Adjustable parameters (read and write parameters)
- r... Display parameters (read only)
- p0918 Adjustable parameter 918
- p0099[0...3] Adjustable parameter 99, indices 0 to 3
- p1001[0...n] Adjustable parameter 1001, indices 0 to n (n = configurable)
- r0944 Display parameter 944
- r2129.0...15 Display parameter 2129 with bit field from bit 0 (lowest bit) to bit 15 (highest bit)

Other examples of the notation in the documentation:

- p1070[1] Adjustable parameter 1070, index 1
- p2098[1].3 Adjustable parameter 2098, index 1 bit 3
- r0945[2](3) Display parameter 945, index 2 of drive object 3
- p0795.4 Adjustable parameter 795, bit 4

The following applies to adjustable parameters:

The parameter value as delivered is specified under "Factory setting" with the relevant unit in square brackets. The value can be adjusted within the range defined by "Min" and "Max".

The term "linked parameterization" is used in cases where changes to adjustable parameters affect the settings of other parameters.

Linked parameterization can occur, for example, as a result of the following actions and parameters:

- Executing macros
p0015, p0700, p1000, p1500
- Setting the PROFIBUS telegram (BICO interconnection)
p0922
- Setting component lists
p0230, p0300, p0301, p0400
- Automatic calculation and pre-assignment
p0112, p0340, p0578, p3900
- Restoring the factory settings
p0970

The following applies to display parameters:

The fields "Min", "Max" and "Factory setting" are specified with a dash "-" and the relevant unit in square brackets.

Note

The parameter list can contain parameters that are not visible in the expert lists of the particular commissioning software (e.g. parameters for trace functions).

BICO: Full parameter name / short name

The following abbreviations can appear in front of the parameter name:

- **BI:** Binector Input
This parameter is used for selecting the source of a digital signal.
- **BO:** Binector output
This parameter is available as a digital signal for interconnection with other parameters.
- **CI:** Connector Input
This parameter is used for selecting the source of an "analog" signal.
- **CO:** Connector output
This parameter is available as an "analog" signal for interconnection with other parameters.
- **CO/BO:** Connector/Binector Output
This parameter is available as an "analog" and digital signal for interconnection with other parameters.

Note

A connector input (CI) cannot be arbitrarily interconnected with any connector output (CO, signal source).

When interconnecting a connector input using the commissioning software, only the corresponding possible signal sources are listed.

Drive object (function module)

A drive object (DO) is an independent, "self-contained" functional unit that has its own parameters and, in some cases, faults and alarms.

When carrying out commissioning using the commissioning software, you can select/deselect additional functions and their parameters by activating/deactivating function modules accordingly.

The parameter list specifies the associated drive object and function module for each individual parameter.

Examples:

- **p1070 CI: Main setpoint**
VECTOR
The parameter is only available with the VECTOR drive object, regardless of which function modules have been activated.
- **p1055 BI: Jog bit 0**
VECTOR
The parameter is available with the VECTOR drive object, regardless of which function modules have been activated (i.e. it is available with every activated function module belonging to the drive object).

A parameter can belong to a single, multiple, or all drive objects.

The following information relating to "Drive object" and "Function module" can be displayed under the parameter number:

Table 2-1 Data in the "Drive object (function module)" field

Drive object (function module)	Type	Meaning
All objects	-	This parameter is used by all drive objects.
B_INF	30	Basic Infeed closed-loop control Unregulated line infeed unit (without regenerative feedback) for rectifying the line voltage of the DC link.
B_INF (Rec)	-	Basic Infeed with "Recorder" function module (r0108.5)
B_INF (parallel)	-	Basic Infeed with "Parallel connection" function module (r0108.15).
B_INF (Brk Mod Ext)	-	Basic Infeed with "Braking Module external" function module (r0108.26).
B_INF (Cooling unit)	-	Basic Infeed with "Cooling unit" function module (r0108.28)
B_INF (PN CBE20)	-	Basic Infeed with "PROFINET CBE20" function module (r0108.31).
CU_G130_DP		SINAMICS G130 Control Unit with PROFIBUS interface.
CU_G130_DP (CAN)	-	SINAMICS G130 Control Unit with PROFIBUS interface and "CAN" function module (p0108.29).
CU_G130_DP (COMM BOARD)		SINAMICS G130 Control Unit with PROFIBUS interface and "COMM BOARD" function module (p0108.30).
CU_G130_DP (PN CBE20)	-	SINAMICS G130 Control Unit with PROFIBUS interface and "PROFINET CBE20" function module (p0108.31).
CU_G130_PN		SINAMICS G130 Control Unit with PROFINET interface.
CU_G130_PN (CAN)	-	SINAMICS G130 Control Unit with PROFINET interface and "CAN" function module (p0108.29).
CU_G130_PN (COMM BOARD)		SINAMICS G130 Control Unit with PROFINET interface and "COMM BOARD" function module (p0108.30).
CU_G130_PN (PN CBE20)		SINAMICS G130 Control Unit with PROFINET interface and "PROFINET CBE20" function module (p0108.31).
CU_G150_DP		SINAMICS G150 Control Unit with PROFIBUS interface.
CU_G150_DP (CAN)	-	SINAMICS G150 Control Unit with PROFIBUS interface and "CAN" function module (p0108.29).
CU_G150_DP (COMM BOARD)		SINAMICS G150 Control Unit with PROFIBUS interface and "COMM BOARD" function module (p0108.30).
CU_G150_DP (PN CBE20)	-	SINAMICS G150 Control Unit with PROFIBUS interface and "PROFINET CBE20" function module (p0108.31).
CU_G150_PN		SINAMICS G150 Control Unit with PROFINET interface.
CU_G150_PN (CAN)	-	SINAMICS G150 Control Unit with PROFINET interface and "CAN" function module (p0108.29).
CU_G150_PN (COMM BOARD)		SINAMICS G150 Control Unit with PROFINET interface and "COMM BOARD" function module (p0108.30).
CU_G150_PN (PN CBE20)		SINAMICS G150 Control Unit with PROFINET interface and "PROFINET CBE20" function module (p0108.31).

2 Parameters

2.1 Overview of parameters

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Meaning
ENC	300	Object for a DRIVE-CLiQ encoder.
ENC (lin_encoder)	-	Object for a DRIVE-CLiQ encoder with "Linear encoder" function module (r0108.12).
ENC (PN_CBE20)	-	Object for a DRIVE-CLiQ encoder with "PROFINET CBE20" function module (r0108.31).
HUB	150	DRIVE-CLiQ Hub Module.
TB30	100	Terminal Board 30.
TM120	207	Terminal Module 120.
TM150	208	Terminal Module 150.
TM31	200	Terminal Module 31.
TM54F_MA	205	Terminal Module 54F Master.
TM54F_SL	206	Terminal Module 54F Slave.
VECTOR_G	12	Vector drive for SINAMICS G130/G150.
VECTOR_G (n/M)	-	Vector drive for SINAMICS G130/G150 with "Speed/torque control" function module (r0108.2).
VECTOR_G (Rec)	-	Vector drive for SINAMICS G130/G150 with "Recorder" function module (r0108.5).
VECTOR_G (J_estimator)	-	Vector drive for SINAMICS G130/G150 with "Moment of inertia estimator" function module (r0108.10).
VECTOR_G (Safety red)	-	Vector drive for SINAMICS G130/G150 with "Safety rotary axis" function module (r0108.13).
VECTOR_G (ext. brake)	-	Vector drive for SINAMICS G130/G150 with "Extended brake control" function module (r0108.14).
VECTOR_G (parallel)	-	Vector drive for SINAMICS G130/G150 with "Parallel connection" function module (r0108.15).
VECTOR_G (Tech_ctrl)	-	Vector drive for SINAMICS G130/G150 with "Technology controller" function module (r0108.16).
VECTOR_G (ext. mess.)	-	Vector drive for SINAMICS G130/G150 with "Extended messages/monitoring functions" function module (r0108.17).
VECTOR_G (Cooling unit)	-	Vector drive for SINAMICS G130/G150 with "Cooling unit" function module (r0108.28).
VECTOR_G (CAN)	-	Vector drive for SINAMICS G130/G150 with "CAN" function module (r0108.29).
VECTOR_G (PN CBE20)	-	Vector drive for SINAMICS G130/G150 with "PROFINET CBE20" function module (r0108.31).

Note

The drive object type is used to identify the drive objects in the drive system (e.g. r0107, r0975[1]).

Can be changed

The "-" sign indicates that the parameter can be changed in any object state and that the change will be effective immediately.

The information "C1(x), C2(x), T, U" ((x): optional) means that the parameter can be changed only in the specified drive unit state and that the change will not take effect until the unit switches to another state. This can be a single state or multiple states.

The following states are available:

- C1(x) Device commissioning C1: Commissioning 1
 Device is being commissioned (p0009 > 0).
 Pulses cannot be enabled.
 The parameter can only be changed for the following device commissioning settings (p0009 > 0):
 - C1: Can be changed for all settings p0009 > 0.
 - C1(x): Can be changed only when p0009 = x.
 A modified parameter value does not take effect until the device commissioning mode is exited with p0009 = 0.
- C2(x) Drive object commissioning C2: Commissioning 2
 Drive commissioning is in progress (p0009 = 0 and p0010 > 0).
 Pulses cannot be enabled.
 The parameter can only be changed in the following drive commissioning settings (p0010 > 0):
 - C2: Can be changed for all settings p0010 > 0.
 - C2(x): Can only be changed for the settings p0010 = x.
 A modified parameter value does not take effect until drive commissioning mode is exited with p0010 = 0.
- U Operation U: Run
 Pulses are enabled.
- T Ready T: Ready to run
 The pulses are not enabled and the state "C1(x)" or "C2(x)" is not active.

Note

Parameter p0009 is CU-specific (belongs to the Control Unit).

Parameter p0010 is drive-specific (belongs to each drive object).

The operating state of individual drive objects is displayed in r0002.

Calculated

Specifies whether the parameter is influenced by automatic calculations.

The calculation attribute defines which activities influence the parameter.

The following attributes apply:

- CALC_MOD_ALL
 - p0340 = 1
 - Project download with commissioning software and send from p0340 = 3
- CALC_MOD_CON
 - p0340 = 1, 3, 4
- CALC_MOD_EQU
 - p0340 = 1, 2
- CALC_MOD_LIM_REF
 - p0340 = 1, 3, 5
 - p0578 = 1
- CALC_MOD_REG
 - p0340 = 1, 3

Note

For p3900 > 0, p0340 = 1 is also called automatically.

After p1910 = 1, p0340 = 3 is also called automatically.

Access level

Specifies the minimum access level required to be able to display and change the relevant parameter. The required access level can be set using p0003.

The system uses the following access levels:

- 1: Standard
- 2: Extended
- 3: Expert
- 4: Service

Note

Parameter p0003 is CU-specific (belongs to the Control Unit).

A higher access level will also include the functions of the lower levels.

Data type

The information on the data type can consist of the following two items (separated by a slash):

- First item
Data type of the parameter.
- Second item (for binector or connector input only)
Data type of the signal source to be interconnected (binector/connector output).

Parameters can have the following data types:

- Integer8 I8 8-bit integer number
- Integer16 I16 16-bit integer number
- Integer32 I32 32-bit integer number
- Unsigned8 U8 8 bits without sign
- Unsigned16 U16 16 bits without sign
- Unsigned32 U32 32 bits without sign
- FloatingPoint32 Float 32-bit floating point number

Depending on the data type of the BICO input parameter (signal sink) and BICO output parameter (signal source), the following combinations are possible when creating BICO interconnections:

Table 2-2 Possible combinations of BICO interconnections

BICO output parameter	BICO input parameter			
	CI parameter			BI parameter
	Unsigned32 / Integer16	Unsigned32 / Integer32	Unsigned32 / FloatingPoint32	Unsigned32 / Binary
CO: Unsigned8	x	x	–	–
CO: Unsigned16	x	x	–	–
CO: Integer16	x	x	r2050, r8850	–
CO: Unsigned32	x	x	–	–
CO: Integer32	x	x	r2060, r8860	–
CO: FloatingPoint32	x	x	x	–
BO: Unsigned8	–	–	–	x
BO: Unsigned16	–	–	–	x
BO: Integer16	–	–	–	x
BO: Unsigned32	–	–	–	x
BO: Integer32	–	–	–	x
BO: FloatingPoint32	–	–	–	–
Legend: x : BICO interconnection permitted –: BICO interconnection not permitted rxxxx: BICO interconnection is only permitted for the specified CO parameters				

Dynamic index

For parameters with a dynamic index [0...n], the following information is specified here:

- Data set (if available).
- Parameter for the number of indices (n = number - 1).

The following information can be contained in this field:

- "CDS, p0170" (Command Data Set, CDS count)

Example:

p1070[0] → main setpoint [command data set 0]

p1070[1] → main setpoint [command data set 1], etc.

- "DDS, p0180" (Drive Data Set, DDS count)
- "EDS, p0140" (Encoder Data Set, EDS count)
- "MDS, p0130" (Motor Data Set, MDS count)
- "PDS, p0120" (Power unit Data Set, PDS count)
- "p2615" (traversing blocks count)

Function diagram

The parameter is included in this function diagram. The structure of the parameter function and its relationship with other parameters is shown in the specified function diagram.

P-Group (only when accessing via BOP (Basic Operator Panel))

Specifies the functional group to which this parameter belongs. The required parameter group can be set via p0004.

Note

Parameter p0004 is CU-specific (belongs to the Control Unit).

Unit, unit group and unit selection

The standard unit of a parameter is specified in square brackets after the values for "Min", "Max", and "Factory setting".

For parameters where the unit can be switched over, the specifications for "Unit group" and "Unit selection" determine the group to which this parameter belongs and with which parameter the unit can be changed over.

Example:

Unit group: 7_1, unit selection: p0505

The parameter belongs to unit group 7_1 and the unit can be changed over using p0505.

Note

Detailed information on changing over units can be found in the following references:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions

References: /BA3/ SINAMICS S150 Operating Instructions

All the potential unit groups and possible unit selections are listed below.

Table 2-3 Unit groups (p0100)

Unit group	Unit selection for p0100 =		Reference variable for %
	0	1	
7_4	Nm	lbf ft	-
8_4	N	lbf	-
14_2	W	HP	-
14_6	kW	HP	-
14_13	W/A	HP/A	-
14_14	W min/1000	HP min/1000	-
14_15	W/A ²	HP/A ²	-

Table 2-6 Unit group (p0595)

Unit group	Unit selection for p0595 =		Reference variable for %
	Value	Unit	
9_1	The values that can be set and the technological units are shown in p0595.		

Parameter values

Min	Minimum value of the parameter [unit]
Max	Maximum value of the parameter [unit]
Factory setting	Value when delivered [unit]
	In the case of a binector/connector input, the signal source of the default BICO interconnection is specified. A non-indexed connector output is assigned the index [0].
	A different value may be displayed for certain parameters (e.g. p1800) at the initial commissioning stage or when establishing the factory settings.
	Reason:
	The setting of these parameters is determined by the operating environment of the Control Unit (e.g. depending on converter type, macro, power unit).

Note

For SINAMICS G130/G150, the macros and their settings are provided in the following documentation:

References: SINAMICS G150/G130 Operating Instructions

Not for motor type

Specifies for which motor type this parameter has no significance

- ASM : Induction motor
- PMSM : Permanent-magnet synchronous motor
- REL : Reluctance motor textiles / SIEMOSYN motor
- RESM : Synchronous reluctance motor
- SESM : Separately-excited synchronous motor

Normalization

Specification of the reference variable with which a signal value is automatically converted for a BICO interconnection.

The following reference variables are available:

- p2000 ... p2007: Reference speed, reference voltage, etc.
- PERCENT: 1.0 = 100 %
- 4000H: 4000 hex = 100 % (wort) or 4000 0000 hex = 100 % (double word)
- p0514: specific normalization

Refer to the description for p0514[0...9] and p0515[0...19] to p0524[0...19]

Expert list

Specifies whether this parameter is available in the expert list of the specified drive objects in the commissioning software.

- 1: Parameter exists in the expert list.
- 0: Parameter does not exist in the expert list.

NOTICE
Users assume full responsibility for using parameters marked "Expert list: 0" (parameter does not exist in the expert list).
These parameters and their functionalities have not been tested and no further user documentation is available for them (e.g. description of functions). Moreover, no support is provided for these parameters by "Technical Support" (hotline).

Description

Explanation of the function of a parameter

Values

Lists the possible values of a parameter.

Recommendation

Information about recommended settings.

Index

The name and meaning of each individual index is specified for indexed parameters.

The following applies to the values (Min, Max, Factory setting) for indexed adjustable parameters:

- Min, Max:
The adjustment range and unit apply to all indices.
- Factory setting:
When all indices have the same factory setting, index 0 is specified with the unit to represent all indices.
When the indices have different factory settings, they are all listed individually with the unit.

Bit field

For parameters with bit fields, the following information is provided about each bit:

- Bit number and signal name
- Meaning for signal states 0 and 1
- Function diagram (optional)
The signal is shown in this function diagram.

Dependency

Conditions that must be fulfilled in conjunction with this parameter. Also includes special effects that can occur between this parameter and others.

Where necessary, "Refer to:" indicates the following information:

- List of other relevant parameters to be considered.
- List of faults and alarms to be considered.

Safety instructions

Important information that must be observed to avoid the risk of injury or material damage.

Information that must be observed to avoid any problems.

Information that the user may find useful.

Danger

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Warning

The description of this safety instruction can be found at the beginning of this manual, see "Legal information (Page 4)".

Caution

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Notice

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Note

Information that the user may find useful.

2.1.2 Number ranges of parameters

Note

The following number ranges represent an overview for all the parameters available for the SINAMICS drive family.

The parameters for the product described in this List Manual are described in detail in "List of parameters (Page 34)".

Parameters are grouped into the following number ranges:

Table 2-7 Number ranges for SINAMICS

Range		Description
From	To	
0000	0099	Display and operation
0100	0199	Commissioning
0200	0299	Power section
0300	0399	Motor
0400	0499	Encoder
0500	0599	Technology and units, motor-specific data, probes
0600	0699	Thermal monitoring, maximum current, operating hours, motor data, central probe
0700	0799	Control Unit terminals, measuring sockets
0800	0839	CDS, DDS data sets, motor changeover
0840	0879	Sequence control (e.g. signal source for ON/OFF1)
0880	0899	ESR, parking, control and status words
0900	0999	PROFIBUS/PROFIdrive
1000	1199	Setpoint channel (e.g. ramp-function generator)
1200	1299	Functions (e.g. motor holding brake)
1300	1399	U/f control
1400	1799	Closed-loop control
1800	1899	Gating unit
1900	1999	Power unit and motor identification
2000	2009	Reference values
2010	2099	Communication (fieldbus)
2100	2139	Faults and alarms
2140	2199	Signals and monitoring
2200	2359	Technology controller
2360	2399	Staging, hibernation
2500	2699	Position control (LR) and basic positioning (EPOS)
2700	2719	Reference values, display

2 Parameters

2.1 Overview of parameters

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
2720	2729	Load gearbox
2800	2819	Logic operations
2900	2930	Fixed values (e. g. percentage, torque)
3000	3099	Motor identification results
3100	3109	Real-time clock (RTC)
3110	3199	Faults and alarms
3200	3299	Signals and monitoring
3400	3659	Infeed closed-loop control
3660	3699	Voltage Sensing Module (VSM), Braking Module internal
3700	3779	Advanced Positioning Control (APC)
3780	3819	Synchronization
3820	3849	Friction characteristic
3850	3899	Functions (e. g. long stator)
3900	3999	Management
4000	4599	Terminal Board, Terminal Module (e. g. TB30, TM31)
4600	4699	Sensor Module
4700	4799	Trace
4800	4849	Function generator
4950	4999	OA application
5000	5169	Spindle diagnostics
5200	5230	Current setpoint filter 5 ... 10 (r0108.21)
5400	5499	System droop control (e. g. shaft generator)
5500	5599	Dynamic grid support (solar)
5600	5614	PROFenergy
5900	6999	SINAMICS GM/SM/GL/SL
7000	7499	Parallel connection of power units
7500	7599	SINAMICS SM120
7700	7729	External messages
7770	7789	NVRAM, system parameters
7800	7839	EEPROM read/write parameters
7840	8399	Internal system parameters
8400	8449	Real-time clock (RTC)
8500	8599	Data and macro management
8600	8799	CAN bus
8800	8899	Communication Board Ethernet (CBE), PROFIdrive

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
8900	8999	Industrial Ethernet, PROFINET, CBE20
9000	9299	topology
9300	9399	Safety Integrated
9400	9499	Parameter consistency and storage
9500	9899	Safety Integrated
9900	9949	topology
9950	9999	Diagnostics, internal
10000	10199	Safety Integrated
11000	11299	Free technology controller 0, 1, 2
20000	20999	Free function blocks (FBLOCKS)
21000	25999	Drive Control Chart (DCC)
50000	53999	SINAMICS DC MASTER (closed-loop DC current control)
61000	61001	PROFINET

2.2 List of parameters

Product: SINAMICS G130/G150, Version: 5202300, Language: eng
 Objects: CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

r0002	Control Unit operating display / CU op_display		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	117	-

Description: Operating display for the Control Unit (CU).

Value:

0:	Operation
10:	Ready
20:	Wait for run-up
25:	Wait for automatic FW update of DRIVE-CLiQ components
31:	Commissioning tool download active
33:	Remove/acknowledge topology error
34:	Exit commissioning mode
35:	Carry out first commissioning
70:	Initialization
80:	Reset active
99:	Internal software error
101:	Specify topology
111:	Insert drive object
112:	Delete drive object
113:	Change drive object number
114:	Change component number
115:	Run parameter download
117:	Delete component

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	Drive operating display / Drv op_display		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-

Description: Operating display for the drive.

Value:

0:	Operation - everything enabled
10:	Operation - set "enable setpoint" = "1" (p1142, p1152)
11:	Operation - set "enable speed controller" = "1" (p0856)
12:	Operation - RFG frozen, set "RFG start" = "1" (p1141)
13:	Operation - set "enable RFG" = "1" (p1140)
14:	Oper. - MotID, excit. running and/or brake opens, SS2, STOP C
15:	Operation - open brake (p1215)
16:	Operation - withdraw braking with OFF1 using "ON/OFF1" = "1"
17:	Operation - braking with OFF3 can only be interrupted with OFF2
18:	Operation - brake on fault, remove fault, acknowledge
19:	Operation - armature short-circ./DC brake act. (p1230, p1231)
21:	Ready for operation - set "Enable operation" = "1" (p0852)
22:	Ready for operation - de-magnetizing running (p0347)
23:	Ready for operation - set "Infeed operation" = "1" (p0864)
31:	Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35:	Switching on inhibited - carry out first commissioning (p0010)
41:	Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42:	Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
43:	Switching on inhibited - set "OC/OFF3" = "1" (p0848, p0849)

44: Switching on inhibited - supply STO terminal w/ 24 V (hardware)
 45: Switching on inhibited - rectify fault, acknowledge fault, STO
 46: Switching on inhibited - exit commissioning mode (p0009, p0010)
 60: Drive object deactivated/not operational
 70: Initialization
 200: Wait for booting/partial booting
 250: Device signals a topology error

Dependency:

Refer to: r0046

Notice:

For several missing enable signals, the corresponding value with the highest number is displayed.

Note:

OC: Operating condition
 EP: Enable Pulses (pulse enable)
 RFG: Ramp-function generator
 COMM: Commissioning
 MotID: Motor data identification
 SS2: Safe Stop 2
 STO: Safe Torque Off

r0002 Infeed operating display / INF op_display

B_INF

Can be changed: -**Calculated:** -**Access level:** 1**Data type:** Integer16**Dyn. index:** -**Func. diagram:** -**P-Group:** -**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0

250

-

Description:

Operating display for the infeed.

Value:

0: Operation - everything enabled
 31: Ready for switching on - precharging running (p0857)
 32: Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
 35: Switching on inhibited - carry out first commissioning (p0010)
 41: Switching on inhibited - set "ON/OFF1" = "0" (p0840)
 42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
 44: Switching on inhibited - connect 24 V to terminal EP (hardware)
 45: Switching on inhibited - remove fault cause, acknowledge fault
 46: Switching on inhibited - exit commissioning mode (p0009, p0010)
 60: Infeed deactivated/not operational
 70: Initialization
 200: Wait for booting/partial booting
 250: Device signals a topology error

Dependency:

Refer to: r0046

Notice:

For several missing enable signals, the corresponding value with the highest number is displayed.

Note:

OC: Operating condition
 COMM: Commissioning

r0002 TM120 operating display / TM120 op_display

TM120

Can be changed: -**Calculated:** -**Access level:** 1**Data type:** Integer16**Dyn. index:** -**Func. diagram:** -**P-Group:** -**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0

250

-

Description:

Operating display for Terminal Module 120 (TM120)

Value:

0: Module in cyclic operation
 40: Module not in cyclic operation
 50: Alarm
 60: Fault
 70: Initialization
 120: Module deactivated

2 Parameters

2.2 List of parameters

200: Wait for booting/partial booting

250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM150 operating display / TM150 op_display

TM150	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-

Description: Operating display for Terminal Module 150 (TM150)

Value:

- 0: Module in cyclic operation
- 40: Module not in cyclic operation
- 50: Alarm
- 60: Fault
- 70: Initialization
- 120: Module deactivated
- 200: Wait for booting/partial booting
- 250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM31 operating display / TM31 op_display

TM31	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-

Description: Operating display for Terminal Module 31 (TM31).

Value:

- 0: Module in cyclic operation
- 40: Module not in cyclic operation
- 50: Alarm
- 60: Fault
- 70: Initialization
- 120: Module deactivated
- 200: Wait for booting/partial booting
- 250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TB30 operating display / TB30 op_display

TB30	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-

Description: Operating display for Terminal Board 30 (TB30).

Value:

- 0: Module in cyclic operation
- 40: Module not in cyclic operation
- 60: Fault
- 70: Initialization
- 80: Reset active
- 120: Module deactivated
- 200: Wait for run-up
- 250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002	TM54F operating display / TM54F op_display		
TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-
Description:	Operating display for Terminal Module 54F (TM54F).		
Value:	0: Module in cyclic operation 40: Module not in cyclic operation 50: Alarm 60: Fault 70: Initialization 120: Module deactivated 200: Wait for booting/partial booting 250: Device signals a topology error		
r0002	Encoder DO operating display / Enc DO op_display		
ENC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-
Description:	Operating display for encoder drive object.		
Value:	0: Encoder in cyclic operation 35: Carry out first commissioning (p0010) 45: Remove fault cause, acknowledge fault 46: Exit commissioning mode (p0009, p0010) 60: Encoder deactivated 200: Wait for booting/partial booting 250: Device signals a topology error		
Notice:	For several missing enable signals, the corresponding value with the highest number is displayed.		
r0002	DRIVE-CLiQ Hub Module operating display / Hub op_display		
HUB	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	250	-
Description:	Operating display for the DRIVE-CLiQ Hub Module.		
Value:	0: Module in cyclic operation 40: Module not in cyclic operation 50: Alarm 60: Fault 70: Initialization 120: Module deactivated 200: Wait for booting/partial booting 250: Device signals a topology error		
Notice:	For several missing enable signals, the corresponding value with the highest number is displayed.		

p0003	BOP access level / BOP acc_level		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1, U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	4	1
Description:	Sets the access level for reading and writing parameters via the Basic Operator Panel (BOP).		
Value:	1: Standard 2: Extended 3: Expert 4: Service		
Note:	A higher set access level also includes the lower one. Access level 1 (standard): Parameters for simplest possible operations. Access level 2 (extended): Parameters to operate the basic functions of the drive unit. Access level 3 (experts): Expert know-how is required for these parameters (e.g. BICO parameterization). Access level 4 (service): For these parameters, it is necessary that authorized service personnel enter the appropriate password (p3950).		

p0004	BOP display filter / BOP disp_filter		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	99	0
Description:	Sets the display filter for parameters with the Basic Operator Panel (BOP).		
Value:	0: All parameters 1: Displays, signals 2: Power unit 3: Motor 4: Encoder/position encoder 5: Technology/units 7: Digital inputs/outputs, commands, sequence control 8: Analog inputs/outputs 10: Setpoint channel/ramp-fct generator 12: Functions 13: U/f control 14: Control 15: Data sets 17: Basic positioner 18: Gating unit 19: Motor identification 20: Communication 21: Faults, alarms, monitoring functions 25: Position control 28: Free function blocks 47: Trace and function generator 50: Technology Extensions 90: Topology 95: Safety Integrated 98: Command Data Sets (CDS) 99: Drive Data Sets (DDS)		
Dependency:	Refer to: p0003		

Notice: The display filter via p0004 provides precise filtering and displays the corresponding parameters only when p0009 and p0010 = 0.

Note: The set access level via p0003 is also relevant for the display filter via p0004.

Examples (assumption: p0009 = p0010 = 0):

p0003 = 1, p0004 = 3

--> Only the parameters for the motor with access level 1 are displayed.

p0003 = 2, p0004 = 3

--> Only the parameters for the motor with access levels 1 and 2 are displayed.

p0005[0...1]	BOP operating display selection / BOP op_disp sel		
All objects	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	[0] 2 [1] 0
Description:	Sets the parameter number and parameter index for display for p0006 = 2, 4 for the Basic Operator Panel (BOP). Examples for the SERVO drive object: p0005[0] = 21, p0005[1] = 0: Actual speed smoothed (r0021) p0005[0] = 25, p0005[1] = 0: Output voltage smoothed (r0025)		
Index:	[0] = Parameter number [1] = Parameter index		
Dependency:	Refer to: p0006		
Note:	Procedure: 1. The parameter number to be displayed should be set in index 0. Only the monitoring parameters (read-only parameters) can be set that actually exist for the actual drive object. If the set parameter number is not indexed, or if there is an index in index 1 that lies outside the valid range of the set parameter, then index 1 is automatically set to 0. 2. The index that belongs to the parameter set in index 0 should be set in index 1. The permissible changes in index 1 always depend on the parameter number set in index 0.		

p0006	BOP operating display mode / BOP op_disp mode		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4	4	4
Description:	Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".		
Value:	4: p0005		
Dependency:	Refer to: p0005		
Note:	Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object. Mode 4 is available for all drive objects.		

2 Parameters

2.2 List of parameters

p0006	BOP operating display mode / BOP op_ disp mode		
VECTOR_G, B_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	4
Description:	Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".		
Value:	0: Operation --> r0021, otherwise r0020 <--> r0021 1: Operation --> r0021, otherwise r0020 2: Operation --> p0005, otherwise p0005 <--> r0020 3: Operation --> r0002, otherwise r0002 <--> r0020 4: p0005		
Dependency:	Refer to: p0005		
Note:	Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object. Mode 4 is available for all drive objects.		

p0007	BOP background lighting / BOP lighting		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [s]	2000 [s]	0 [s]
Description:	Sets the delay time until the background lighting of the Basic Operator Panel (BOP) is switched off. If no keys are actuated, then the background lighting automatically switches itself off after this time has expired.		
Note:	p0007 = 0: Background lighting is always switched on (factory setting).		

p0008	BOP drive object after booting / BOP DO after boot		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	65535	1
Description:	Sets the required drive object that is active at the Basic Operator Panel (BOP) after booting.		
Note:	The value from p0008 initializes the display on the Basic Operator Panel (BOP) at the top left after booting. The drive object Control Unit is selected using the value 1.		

p0009	Device commissioning parameter filter / Dev comm par_filt		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10000	1
Description:	Sets the device and basic drive commissioning. By appropriately setting this parameter, those parameters are filtered that can be written into in the various commissioning steps.		
Value:	0: Ready 1: Device configuration 2: Defining the drive type/function module		

3: Drive base configuration
 4: Data set base configuration
 29: Device download
 30: Parameter reset
 50: Install Technology Extension
 55: Install Technology Extension
 101: Topology input
 111: Insert drive object
 112: Delete drive object
 113: Change drive object number
 114: Change component number
 115: Parameter download
 117: Delete component
 10000: Ready (asynchronous)

Notice:

For p0009 = 0:

The check and the calculation can take a longer period of time, so that in the worst case scenario, communication with the commissioning tool is interrupted. As a consequence, alternatively p0009 = 10000 can be used.

For p0009 = 10000:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note:

The drives can only be switched on outside the device commissioning (the inverter enabled). In this case, p0009 must be 0 (Ready) and the individual drive objects must have already gone into operation (p0010).

p0009 = 0: ready

When changing into this state, the device configuration is checked and commissioning completed (a new start can be initiated).

p0009 = 1: Device configuration

At the first commissioning of the device, after booting, the device is in the "device configuration" state. To start the internal automatic first commissioning of the drive unit, p0009 should be set to 0 (Ready) after the ID for the actual topology (r0098) was transferred into the ID for the target topology (p0099). To do this, it is sufficient to set a single index value of p0099[x] the same as r0098[x]. Before the device has been completely commissioned, no other parameter can be changed. After the first commissioning was carried out, in this state, when required, other basic device configuration parameters can be adapted (e.g. the basic sampling time in p0110).

p0009 = 2: Defines the drive type / function module

In this state, the drive object types and/or the function modules can be changed or selected for the individual drive objects. To do this, the drive object type can be set using p0107[0...15] and the function can be set using p0108[0...15] (refer to p0101[0...15]).

p0009 = 3: Drive basic configuration

In this state, after the device has been commissioned for the first time, basic changes can be made for the individual drive objects (e.g. sampling times in p0111, p0112, p0115 and the number of data sets in p0120, p0130, p0140, p0170, p0180).

p0009 = 4: Data set basic configuration

In this state, after the device has been commissioned for the first time, for the individual drive objects changes can be made regarding the assignment of the components (p0121, p0131, p0141, p0151, p0161) to the individual data sets and the assignment of the power unit, motor and encoder to the drive data sets (p0185, ...).

p0009 = 29: Device download

In the case of a download via the commissioning tool, the device is automatically brought into this state. After the download has been completed, p0009 is automatically set to 0 (ready). It is not possible to manually set p0009 to this value.

p0009 = 30: Parameter reset

In order to bring the complete unit into the "first commissioning" state or to load the parameters saved using p0977, to start, p0009 must be set to this value. p0976 can then be changed to the required value.

p0009 = 50: configure Technology Extension

After the device has been commissioned for the first time, in this state, Technology Extensions can be activated/deactivated for the individual drive objects (p4956).

p0009 = 55: install Technology Extension

Technology Extensions can be installed/uninstalled in this state.

p0009 = 101: Topology input

In this state, the DRIVE-CLiQ target topology can be entered using p9902 and p9903.

p0009 = 111: Insert drive object

This state allows a new drive object to be inserted using p9911.

2 Parameters

2.2 List of parameters

p0009 = 112: Delete drive object

This state allows existing drive objects to be deleted using p9912 after the device has been commissioned for the first time.

p0009 = 113: Change drive object number

This state allows the drive object number of existing drive objects to be changed using p9913 after the device has been commissioned for the first time.

p0009 = 114: Change component number

This state allows the component number of existing components to be changed using p9914 after the device has been commissioned for the first time.

p0009 = 115: Parameter download

This state allows the complete device and drive commissioning using the parameter services.

p0009 = 117: Delete component

This state allows components to be deleted using p9917 after the device has been commissioned for the first time.

p0009 = 10000: ready (asynchronous)

When changing into this state, internally p0009 is set = 0. Additional calculations and checks are carried out in the background (asynchronously).

p0010	Drive commissioning parameter filter / Drv comm. par_filt		
VECTOR_G	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 2800, 2818
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10000	1

Description: Sets the parameter filter to commission a drive.

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

Value:

- 0: Ready
- 1: Quick commissioning
- 2: Power unit commissioning
- 3: Motor commissioning
- 4: Encoder commissioning
- 5: Technological application/units
- 15: Data sets
- 17: Basic positioner commissioning
- 25: Position control commissioning
- 29: Only Siemens internal
- 30: Parameter reset
- 95: Safety Integrated commissioning
- 10000: Ready with immediate feedback signal

Notice: For p0010 = 10000 the following applies:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

By setting p3900 to a value other than 0, the quick commissioning is completed, and this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 = 10000 corresponds to p0010 = 0. Unlike with p0010 = 0, the parameter modification is applied immediately and the calculations are made in the background. Further parameter modifications cannot be made while the calculations are being performed.

p0010	Infeed commissioning parameter filter / INF comm par_filt		
B_INF	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	1
Description:	Sets the parameter filter to commission an infeed unit. Setting this parameter filters out the parameters that can be written into in the various commissioning steps.		
Value:	0: Ready 1: Quick commissioning 2: Power unit commissioning 5: Technological application/units 29: Only Siemens internal 30: Parameter reset		
Note:	The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0. For p3900 not equal to 0, at the end of the quick commissioning, this parameter is automatically reset to 0. Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		
p0010	TM120 commissioning parameter filter / TM120 com par_filt		
TM120	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	0
Description:	Sets the parameter filter for commissioning a Terminal Module 120 (TM120). Setting this parameter filters out the parameters that can be written into in the various commissioning steps. For the BOP, this setting also causes the read access operations to be filtered.		
Value:	0: Ready 29: Only Siemens internal 30: Parameter reset		
Dependency:	Refer to: p0970		
Note:	Only the following values are possible: p0010 = 0, 30 Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		
p0010	TM150 commissioning parameter filter / TM150 com par_filt		
TM150	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	0
Description:	Sets the parameter filter for commissioning a Terminal Module 150 (TM150). Setting this parameter filters out the parameters that can be written into in the various commissioning steps. For the BOP, this setting also causes the read access operations to be filtered.		
Value:	0: Ready 29: Only Siemens internal 30: Parameter reset		
Dependency:	Refer to: p0970		
Note:	Only the following values are possible: p0010 = 0, 30 Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		

p0010	TM31 commissioning parameter filter / TM31 comm par_filt		
TM31	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	0
Description:	Sets the parameter filter for commissioning a Terminal Module 31 (TM31). Setting this parameter filters out the parameters that can be written into in the various commissioning steps. For the BOP, this setting also causes the read access operations to be filtered.		
Value:	0: Ready 29: Only Siemens internal 30: Parameter reset		
Dependency:	Refer to: p0970		
Note:	Only the following values are possible: p0010 = 0, 30 Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		
p0010	TB30 commissioning parameter filter / TB30 comm.par_filt		
TB30	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	0
Description:	Sets the parameter filter for commissioning a Terminal Board 30 (TB30). Setting this parameter filters out the parameters that can be written into in the various commissioning steps. For the BOP, this setting also causes the read access operations to be filtered.		
Value:	0: Ready 29: Only Siemens internal 30: Parameter reset		
Dependency:	Refer to: p0970		
Note:	Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		
p0010	TM54F commissioning parameter filter / TM54F com par_filt		
TM54F_MA	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 2891
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	95	0
Description:	Sets the parameter filter for commissioning a Terminal Module 54F (TM54F). Setting this parameter filters out the parameters that can be written into in the various commissioning steps. For the BOP, this setting also causes the read access operations to be filtered.		
Value:	0: Ready 29: Only Siemens internal 30: Parameter reset 95: Safety Integrated commissioning		
Dependency:	Refer to: p0970		
Note:	Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		

p0010	Encoder DO commissioning parameter filter / EncDO com par_filt		
ENC	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: All groups	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	30	0
Description:	Sets the parameter filter to commission an encoder drive object. Setting this parameter filters out the parameters that can be written into in the various commissioning steps. For the BOP, this setting also causes the read access operations to be filtered.		
Value:	0: Ready 4: Encoder commissioning 5: Technological application/units 29: Only Siemens internal 30: Parameter reset		
Note:	Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.		
p0011	BOP password entry (p0013) / BOP passw ent p13		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Sets the password for the Basic Operator Panel (BOP).		
Dependency:	Refer to: p0012, p0013		
p0012	BOP password acknowledgment (p0013) / BOP passw ackn p13		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Acknowledges the password for the Basic Operator Panel (BOP).		
Dependency:	Refer to: p0011, p0013		
p0013[0...49]	BOP user-defined list / BOP list		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Sets the required parameters to read and write via the Basic Operator Panel (BOP). Activation: 1. p0003 = 3 (expert). 2. p0013[0...49] = requested parameter number. 3. If required, enter p0011 = password in order to prevent non-authorized deactivation. 4. p0016 = 1 --> activates the selected user-defined list.		

2 Parameters

2.2 List of parameters

Deactivation/change:

1. p0003 = 3 (expert).
2. If required, p0012 = p0011, in order to be authorized to change or deactivate the list.
3. If required p0013[0...49] = required parameter number.
4. p0016 = 1 --> activates the modified user-defined list.
5. p0003 = 0 --> deactivates the user-defined list.

Dependency:

Refer to: p0009, p0011, p0012, p0976

Note:

The following parameters can be read and written on the Control Unit drive object:

- p0003 (access stage)
- p0009 (device commissioning, parameter filter)
- p0012 (BOP password acknowledgment (p0013))

The following applies for the user-defined list:

- password protection is only available on the drive object Control Unit and is valid for all of the drive objects.
- p0013 cannot be included in the user-defined list for all drive objects.
- p0003, p0009, p0011, p0012, p0976 cannot, for the drive object Control Unit, be included in the user-defined list.
- the user-defined list can be cleared and deactivated "restore factory setting".

A value of 0 means: Entry is empty.

p0015	Macro drive unit / Macro drv unit		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	999999	1
Description:	Runs the corresponding macro files. The selected macro file must be available on the memory card/device memory. Example: p0015 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0700, p1000, p1500, r8570		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0. When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.		

p0015	Macro drive object / Macro DO		
VECTOR_G, B_INF, TM31, TM120, TM150	Can be changed: C2(1)	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	999999	0
Description:	Runs the corresponding macro files. The selected macro file must be available on the memory card/device memory. Example: p0015 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0700, p1000, p1500, r8570		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0. When executing a specific macro, the corresponding programmed settings are made and become active. No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!		
Note:	The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product.		

p0016	Activate BOP user-defined list / BOP user list act				
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1, U, T	Calculated: -	Access level: 3		
	Data type: Integer16	Dyn. index: -	Func. diagram: -		
	P-Group: All groups	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	1	0		
Description:	Setting for activating/deactivating the user-defined list for the Basic Operator Panel (BOP). If p0016 = 1, then it is only possible to access parameters in the parameter list (p0013).				
Value:	0: BOP user-defined list deactivated 1: BOP user-defined list activated				
Dependency:	Refer to: p0011, p0012, p0013				
Note:	The user-defined list can only be deactivated with p0011 = p0012				
r0018	Control Unit firmware version / CU FW version				
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 1		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	4294967295	-		
Description:	Displays the firmware version of the Control Unit.				
Dependency:	Refer to: r0128, r0148, r0158, r0197, r0198				
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.				
r0019.0...14	CO/BO: Control word BOP / STW BOP				
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9912		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the control word for the Basic Operator Panel (BOP).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON / OFF (OFF1)	ON	OFF (OFF1)	-
	01	No coast-down / coast-down (OFF2)	No coast down	Coast down (OFF2)	-
	02	No Quick Stop / Quick Stop (OFF3)	No Quick Stop	Quick Stop (OFF3)	-
	07	Acknowledge fault (0 -> 1)	Yes	No	-
	13	Motorized potentiometer raise	Yes	No	-
	14	Motorized potentiometer lower	Yes	No	-
r0020	Speed setpoint smoothed / n_set smth				
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5020, 6799		
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505		
	Not for motor type: -	Scaling: p2000	Expert list: 1		
	Min	Max	Factory setting		
	- [rpm]	- [rpm]	- [rpm]		
Description:	Displays the currently smoothed speed setpoint at the input of the speed controller or U/f characteristic (after the interpolator).				
Dependency:	Refer to: r0060				

2 Parameters

2.2 List of parameters

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The speed setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0021	CO: Actual speed smoothed / n_act smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6799
	P-Group: Displays, signals	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the smoothed actual value of the motor speed. Frequency components from the slip compensation (for induction motors) are not included.		
Dependency:	Refer to: r0022, r0063		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).		

r0022	Speed actual value rpm smoothed / n_act rpm smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the smoothed actual value of the motor speed. Frequency components from the slip compensation (for induction motors) are not included. r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.		
Dependency:	Refer to: r0021, r0063		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).		

r0024	Output frequency smoothed / f_outp smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300, 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the smoothed output frequency. Frequency components from the slip compensation (for induction motors) are included.		
Dependency:	Refer to: r0066		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The output frequency is available smoothed (r0024) and unsmoothed (r0066).		

r0025	CO: Output voltage smoothed / U_outp smooth		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 5730, 6300, 6799
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: p2001	Unit selection: - Expert list: 1
	Min - [Vrms]	Max - [Vrms]	Factory setting - [Vrms]
Description:	Displays the smoothed output voltage of the power unit.		
Dependency:	Refer to: r0072		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The output voltage is available smoothed (r0025) and unsmoothed (r0072).		
r0026	CO: DC link voltage smoothed / Vdc smooth		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 6799, 8750, 8850, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: p2001	Unit selection: - Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the smoothed actual value of the DC link voltage.		
Dependency:	Refer to: r0070		
Notice:	For SINAMICS S120 AC Drive (AC/AC) the following applies: When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24 V power supply is connected, a value of approx. 24 V is displayed in the display parameter.		
Note:	SERVO, VECTOR: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
r0026	CO: DC link voltage smoothed / Vdc smooth		
B_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: p2001	Unit selection: - Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the smoothed actual value of the DC link voltage.		
Dependency:	Refer to: r0070		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.		
Note:	A_INF, B_INF, S_INF: smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		

r0027	CO: Absolute actual current smoothed / I_act abs val smth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799, 8850, 8950
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed absolute actual current value.		
Dependency:	Refer to: r0068		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.		
Note:	A_INF, S_INF, VECTOR: Smoothing time constant = 300 ms SERVO: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).		

r0027	CO: Absolute actual current smoothed / I_act abs val smth		
B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8750
	P-Group: Displays, signals	Unit group: 6_4	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the smoothed absolute actual current value.		
Dependency:	Refer to: r0068		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used. For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).		

r0028	Modulation depth smoothed / Mod_depth smth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799, 8950
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the smoothed actual value of the modulation depth.		
Dependency:	Refer to: r0074		
Note:	A_INF: Smoothing time constant = 300 ms SERVO, VECTOR: Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The modulation depth is available smoothed (r0028) and unsmoothed (r0074).		

r0029	Current actual value field-generating smoothed / Id_act smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed field-generating actual current.		
Dependency:	Refer to: r0076		
Note:	SERVO: Smoothing time constant = 100 ms VECTOR: Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).		

r0030	Current actual value torque-generating smoothed / Iq_act smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the smoothed torque-generating actual current.		
Dependency:	Refer to: r0078		
Note:	SERVO: Smoothing time constant = 100 ms VECTOR: Smoothing time constant = 300 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The following applies for SERVO: The torque-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]). The following applies for VECTOR: The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).		

r0031	Actual torque smoothed / M_act smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799
	P-Group: Displays, signals	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the smoothed torque actual value.		
Dependency:	Refer to: r0080		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The torque actual value is available smoothed (r0031) and unsmoothed (r0080).		

r0032	CO: Active power actual value smoothed / P_actv_act smth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals	Unit group: 14_10	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Display and connector output for the smoothed actual value of the active power.		
Dependency:	Refer to: r0082		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.		
Note:	Significance for the drive: Power output at the motor shaft Significance for the infeed: Line power drawn For A_INF, B_INF and S_INF the following applies: The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082). The following applies for SERVO: The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]). For VECTOR and VECTORMV, the following applies: The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).		

r0032	CO: Active power actual value smoothed / P_actv_act smth		
B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5730, 6799, 8750, 8850, 8950
	P-Group: Displays, signals	Unit group: 14_10	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Display and connector output for the smoothed actual value of the active power.		
Dependency:	Refer to: r0082		
Notice:	This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used. For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	Significance for the drive: Power output at the motor shaft Significance for the infeed: Line power drawn For A_INF, B_INF and S_INF the following applies: The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082). The following applies for SERVO: The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]). For VECTOR and VECTORMV, the following applies: The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).		

r0033	Torque utilization smoothed / M_util smooth		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8012
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the smoothed torque utilization as a percentage. The torque utilization is obtained from the required smoothed torque in reference to the torque limit, scaled using p2196.		
Note:	Smoothing time constant = 100 ms The signal is not suitable as a process quantity and may only be used as a display quantity. The torque utilization is available smoothed (r0033) and unsmoothed (r0081). For M_set total (r0079) > 0, the following applies: - Required torque = M_set total - Actual torque limit = M_max upper effective (r1538) For M_set total (r0079) <= 0, the following applies: - Required torque = - M_set total - Actual torque limit = - M_max lower effective (r1539) For the actual torque limit = 0, the following applies: r0033 = 100 % For the actual torque limit < 0, the following applies: r0033 = 0 %		

r0034	CO: Motor utilization thermal / Mot_util therm		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8017, 8019
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for the motor utilization from motor temperature model 1 (I2t) or 3. For motor temperature model 1 (I2t) (p0612.0 = 1), the following applies: For firmware version < 4.7 SP6: - r0034 = (motor model temperature - 40 °C) / (p0605 - 40 °C) * 100 % From firmware version 4.7 SP6: - p0612.12 = 0 and p0612.8 = 0: r0034 = (motor model temperature - 40 °C) / (p0605 - 40 °C) * 100 % - p0612.12 = 0 and p0612.8 = 1: r0034 = (motor model temperature - 40 °C) / p0627 * 100 % - p0612.12 = 1 and p0612.8 = 0: r0034 = (motor model temperature - p0613) / (p0605 - p0613) * 100 % - p0612.12 = 1 and p0612.8 = 1: r0034 = (motor model temperature - p0613) / p0627 * 100 % For motor temperature model 3 (p0612.2 = 1), the following applies: - r0034 = (motor model temperature - r5397) / (r5398 - r5397) * 100 %		
Dependency:	The thermal motor utilization is only determined when the motor temperature model 1 (I2t) or 3 is activated. The following conditions are a prerequisite for additional information. - a temperature sensor has not been parameterized (p0600, p0601). - the current corresponds to the stall current (p0318). - speed n > 1 [rpm]. For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies: - the temperature model operates with an ambient temperature of 20 °C. A motor utilization of 100% is displayed (r0034 = 100 %) when the following conditions are permanently fulfilled: - the ambient temperature is 40 °C (model 1: p0625 = 40 °C, model 3: p0613 = 40 °C). From firmware version 4.7 SP6 and p0612.12 = 1, the following applies: - the ambient temperature can be adapted to the conditions using p0613. Refer to: p0605, p0611, p0612, p0613, p0627, r0632 Refer to: F07011, A07012		

2 Parameters

2.2 List of parameters

Notice: After the drive is switched on, the system starts to determine the motor temperature with an assumed model value. This means that the value for the motor utilization is only valid after a stabilization time.

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
For r0034 = -200.0 %, the following applies:
The value is invalid (e.g. the motor temperature model is not activated or has been incorrectly parameterized).

r0035	CO: Motor temperature / Mot temp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8016, 8017
	P-Group: Displays, signals	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Display and connector output for the actual temperature in the motor.		
Note:	For r0035 not equal to -200.0 °C, the following applies: - this temperature display is valid. - a KTY/PT1000 temperature sensor is connected. - the thermal model for the induction motor is activated (p0612 bit 1 = 1 and temperature sensor deactivated: p0600 = 0 or p0601 = 0). For r0035 equal to -200.0 °C, the following applies: - this temperature display is not valid (temperature sensor error). - a PTC sensor or bimetallic NC contact is connected. - the temperature sensor of the synchronous motor is deactivated (p0600 = 0 or p0601 = 0).		

r0035	CO: Temperature input / Temp_input		
B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8750
	P-Group: Displays, signals	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Displays the temperature currently measured at X21 (booksize) or X41 (chassis). For a BLM with internal Braking Module, a bimetallic sensor must be connected up to monitor the temperature of the braking resistor. The temperature sensor type is indicated using p0601 and cannot be changed for the existing internal Braking Module. Temperature within permissible limit values: r0035 = -50°C Temperature outside the permissible limit values: r0035 = 250°C		
Dependency:	Refer to: F06907, F06908		
Notice:	The function in r0192.11 must be available in order to obtain a correct display.		
Note:	For r0035 equal to -200.0 °C, the following applies: - "no sensor" selected in p0601! For r0035 equal to -300.0 °C, the following applies: - a KTY/PT1000 is selected in p0601 but is not connected! - the temperature display is not valid (temperature sensor error)!		

r0036	CO: Power unit overload I2t / PU overload I2t		
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8021
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the power unit overload determined using the I2t calculation. A current reference value is defined for the I2t monitoring of the power unit. It represents the current that can be conducted by the power unit without any influence of the switching losses (e.g. the continuously permissible current of the capacitors, inductances, busbars, etc.). If the I2t reference current of the power unit is not exceeded, then an overload (0 %) is not displayed. In the other case, the degree of thermal overload is calculated, whereby 100% results in a trip.		
Dependency:	Refer to: p0290, p0294 Refer to: F30005		

r0037[0...1]	Control Unit temperature / CU temp		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Displays the measured Control Unit temperature. An appropriate message is output when the permitted operating temperature is exceeded.		
Index:	[0] = Actual measured value [1] = Maximum measured value		
Dependency:	Refer to: A01009		
Notice:	Only for internal Siemens troubleshooting.		
Note:	The value of -200 indicates that there is no measuring signal.		

r0037[0...20]	CO: Power unit temperatures / PU temperatures		
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8021
	P-Group: Displays, signals	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Display and connector output for the temperature in the power unit.		
Index:	[0] = Inverter maximum value [1] = Depletion layer maximum value [2] = Rectifier maximum value [3] = Air intake [4] = Interior of power unit [5] = Inverter 1 [6] = Inverter 2 [7] = Inverter 3 [8] = Inverter 4 [9] = Inverter 5 [10] = Inverter 6 [11] = Rectifier 1 [12] = Rectifier 2 [13] = Depletion layer 1 [14] = Depletion layer 2 [15] = Depletion layer 3 [16] = Depletion layer 4		

2 Parameters

2.2 List of parameters

[17] = Depletion layer 5
 [18] = Depletion layer 6
 [19] = Cooling unit liquid intake
 [20] = Capacitor air discharge

Notice: Only for internal Siemens troubleshooting.

Note: The value of -200 indicates that there is no measuring signal.

r0037[0]: Maximum value of the inverter temperatures (r0037[5...10]).

r0037[1]: Maximum value of the depletion layer temperatures (r0037[13...18]).

r0037[2]: Maximum value of the rectifier temperatures (r0037[11...12]).

r0037[20]: the measured value is only determined for r0193.13 = 1.

In the case of a fault, the particular shutdown threshold depends on the power unit, and cannot be read out.

r0038 Power factor smoothed / Cos phi smooth

VECTOR_G

Can be changed: -

Min

Max

Factory setting

-

-

-

Description: Displays the smoothed actual power factor.

Notice: For infeed units, the following applies:

For active powers < 25 % of the rated power, this does not provide any useful information.

Note: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

Meaning for motor:

- power factor of the basic fundamental signals at the converter output.

Meaning for infeed:

- Power factor at the connection point (r3470, r3471)

r0039[0...2] CO: Energy display / Energy displ

VECTOR_G

Min

Max

Factory setting

- [kWh]

- [kWh]

- [kWh]

Description: Display and connector output for the energy values at the output terminals of the power unit.

Recommendation: r0042 should be used as process energy display.

Index: [0] = Energy balance (sum)

[1] = Energy drawn

[2] = Energy fed back

Dependency: Refer to: p0040

Note: For a BICO interconnection, signal source r0039 supplies the floating-point value in Ws.

For index [0]:

Difference between the energy drawn and energy that is fed back.

p0040	Reset energy consumption display / Energy usage reset		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to reset the display in r0039 and r0041. Procedure: Set p0040 = 0 --> 1 The displays are reset and the parameter is automatically set to zero.		
Dependency:	Refer to: r0039		
r0041	Energy consumption saved / Energy cons saved		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kWh]	- [kWh]	- [kWh]
Description:	Displays the saved energy referred to 100 operating hours.		
Dependency:	Refer to: p0040		
Note:	This display is used for a fluid-flow machine. The flow characteristic is entered into p3320 ... p3329. For an operating time of below 100 hours, the display is interpolated up to 100 hours.		
r0042[0...2]	CO: Process energy display / Proc energy disp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Wh]	- [Wh]	- [Wh]
Description:	Display and connector output for the energy values at the output terminals of the power unit.		
Index:	[0] = Energy balance (sum) [1] = Energy drawn [2] = Energy fed back		
Dependency:	Refer to: p0043		
Note:	The signal can be displayed as process variable (scaling: 1 = 1 Wh). This is enabled in p0043. The display is also reset with p0040 = 1. If an enable is present in r0043 when the Control Unit powers up, then the value from r0039 is transferred into r0042. As r0039 serves as a reference signal for r0042, due to format reasons, the process energy display can only process values of r0039 up to 2147483 kWh. r0039 should also be reset using this value.

27	De-magnetizing not completed	Yes	No	-
28	Brake open missing	Yes	No	-
29	Cooling unit ready signal missing	Yes	No	-
30	Speed controller inhibited	Yes	No	-
31	Jog setpoint active	Yes	No	-

Dependency:

Refer to: r0002

Note:

The value r0046 = 0 indicates that all enable signals for this drive are present.

Bit 00 = 1 (enable signal missing), if:

- the signal source in p0840 is a 0 signal.
- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:

- the signal source in p0844 or p0845 is a 0 signal.

Bit 02 = 1 (enable signal missing), if:

- the signal source in p0848 or p0849 is a 0 signal.

Bit 03 = 1 (enable signal missing), if:

- the signal source in p0852 is a 0 signal.

Bit 04 = 1 (armature short-circuit active), if:

- the signal source in p1230 has a 1 signal

Bit 05, Bit 06: Being prepared

Bit 08 = 1 (enable signal missing), if:

- safety functions have been enabled and STO is active.
- a safety-relevant signal is present with a STOP A response.

STO enabled via terminals:

- the pulse enable via terminal EP is missing (booksize: X21, chassis: X41), or the signal source in p9620 is for a 0 signal.

STO enabled via PROFIsafe or TM54F:

- STO is selected via PROFIsafe or TM54F.

Bit 09 = 1 (enable signal missing), if:

- the signal source in p0864 is a 0 signal.

Bit 10 = 1 (enable signal missing), if:

- the signal source in p1140 is a 0 signal.

Bit 11 = 1 (enable signal missing) if the speed setpoint is frozen, because:

- the signal source in p1141 is a 0 signal.
- the speed setpoint is entered from jogging and the two signal sources for jogging, bit 0 (p1055) and bit 1 (p1056) have a 1 signal.

Bit 12 = 1 (enable signal missing), if:

- the signal source in p1142 is a 0 signal.
- When activating the function module "basic positioner" (r0108.4 = 1), the signal source in p1142 is set to a 0 signal.

Bit 16 = 1 (enable signal missing), if:

- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:

- commissioning mode is selected (p0009 > 0 or p0010 > 0).
- there is an OFF2 fault response.
- the drive is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).

Bit 18 = 1 (enable signal missing), if:

- OFF3 has still not been completed or an OFF3 fault response is present.

Bit 19 = 1 (internal pulse enable missing), if:

- synchronization is running between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle.

Bit 20 = 1 (internal armature short-circuit active), if:

- the drive is not in the state "S4: Operation" or "S5x" (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

Bit 21 = 1 (enable signal missing), if:

The pulses have been enabled and the speed setpoint has still not been enabled, because:

- the holding brake opening time (p1216) has still not expired.
- the motor has still not been magnetized (induction motor).
- the encoder has not been calibrated (U/f vector and synchronous motor)

Bit 22: Being prepared

Bit 26 = 1 (enable signal missing), if:

- the drive is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).
- the function "parking axis" is selected (BI: p0897 = 1 signal)..
- all power units of a parallel connection are deactivated (p0125, p0895).
- the drive device is in the "PROFInergy energy-saving mode" (r5600, CU-specific).

Bit 27 = 1 (enable signal missing), if:

- de-magnetizing has still not been completed (only for vector).

Bit 28 = 1 (enable signal missing), if:

- the holding brake is closed or has still not been opened.

Bit 29 = 1 (enable signal missing), if:

- the cooling unit ready signal via binector input p0266[1] missing.

Bit 30 = 1 (speed controller inhibited), if one of the following reasons is present:

- a 0 signal is available via binector input p0856.
- the function generator with current input is active.
- the measuring function "current controller reference frequency characteristic" is active.
- the pole position identification is active.
- motor data identification is active (only certain steps).

Bit 31 = 1 (enable signal missing), if:

- the speed setpoint from jog 1 or 2 is entered.

26	Infeed inactive or not operational	Yes	No	-
29	Cooling unit ready signal missing	Yes	No	-

Dependency:

Refer to: r0002

Note:

The value r0046 = 0 indicates that all enable signals for the infeed are present.

Bit 00 = 1 (enable signal missing), if:

- the signal source in p0840 is a 0 signal.
- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:

- the signal source in p0844 or p0845 is a 0 signal.

Bit 16 = 1 (enable signal missing), if:

- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:

- the commissioning mode is selected (p0009 > 0 or p0010 > 0) or there is an OFF2 fault response or the OFF1 signal source (p0840) is changed.

- Bit 26 = 1 (enable signal missing), if:
- the infeed is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).
 - the infeed is in the "PROFenergy energy-saving mode" (r5600, CU-specific).
- Bit 29 = 1 (enable signal missing), if:
- the cooling unit ready signal via binector input p0266[1] missing.

	P-Group: Displays, signals Not for motor type: -	Unit group: 3_1 Scaling: p2000	Unit selection: p0505 Expert list: 1
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]
Description:	Display and connector output for the speed actual value. Frequency components from the slip compensation (for induction motors) are not included. For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output frequency is shown in r0063[0].		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045 [2] = Calculated from f_set - f_slip (unsmoothed)		
Dependency:	Refer to: r0021, r0022		
Note:	The speed actual value is calculated in encoderless operation and for U/f control. For operation with encoder, r0063[0] is smoothed with p1441. The speed actual value r0063[0] – smoothed with p0045 – is additionally displayed in r0063[1]. r0063[1] can be used as process variable for the appropriate smoothing time constant p0045. The speed (r0063[2]) calculated from the output frequency and slip can only be compared with the speed actual value (r0063[0]) in the steady-state. The actual speed (r0063[0]) is available as a display quantity with additional smoothing in r0021. For U/f control, the mechanical speed calculated from the output frequency and the slip is shown in r0063[2] even if slip compensation is deactivated.		

r0064	CO: Speed controller system deviation / n_ctrl sys dev		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 3 Func. diagram: 5040, 6040 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Displays the actual system deviation of the speed controller.		
Note:	In servo control mode with active reference model, the system deviation to the P component of the speed controller is displayed.		
r0065	Slip frequency / f_slip		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: 2_1 Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 6310, 6700, 6727, 6730, 6732 Unit selection: p0505 Expert list: 1 Factory setting - [Hz]
Description:	Displays the slip frequency for induction motors (ASM).		
r0066	CO: Output frequency / f_outp		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dyn. index: - Unit group: 2_1 Scaling: p2000 Max - [Hz]	Access level: 3 Func. diagram: 5300, 5730, 6300, 6310, 6730, 6731, 6799 Unit selection: p0505 Expert list: 1 Factory setting - [Hz]
Description:	Display and connector output for the output frequency of the Motor Module.		
Dependency:	Refer to: r0024		
Note:	The output frequency is available smoothed (r0024) and unsmoothed (r0066).		
r0067	CO: Output current maximum / I_outp max		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 5722, 6300, 6301, 6640 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the maximum output current of the power unit.		
Dependency:	The maximum output current is determined by the parameterized current limit and the motor and converter thermal protection. Refer to: p0290, p0640		

2 Parameters

2.2 List of parameters

r0068[0...1]	CO: Absolute current actual value / I_act abs val		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6300, 6714, 6799, 7017, 8017, 8019, 8029, 8021
	P-Group: Displays, signals Not for motor type: -	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Displays actual absolute current.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0027		
Notice:	The value is updated with the current controller sampling time.		
Note:	Absolute current value = $\sqrt{I_q^2 + I_d^2}$ The absolute value of the current actual value is available smoothed (r0027 with 300 ms, r0068[1] with p0045) and unsmoothed (r0068[0]).		
r0068	CO: DC current in the DC link / I_dc DC link		
B_INF	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 8021, 8750
	P-Group: Displays, signals Not for motor type: -	Unit group: 6_4 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [A]	Max - [A]	Factory setting - [A]
Description:	Displays the DC current in the DC link.		
Dependency:	Refer to: r0027		
Notice:	For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	The DC current in the DC link is available smoothed (r0027) and unsmoothed (r0068).		
r0069[0...8]	CO: Phase current actual value / I_phase act val		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6730, 6731, 6732, 7983, 7987, 8850, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: 6_5 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [A]	Max - [A]	Factory setting - [A]
Description:	Display and connector output for the measured actual phase currents as peak value.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W [3] = Phase U offset [4] = Phase V offset [5] = Phase W offset [6] = Total U, V, W [7] = Alpha component [8] = Beta component		
Note:	In indices 3 ... 5, the offset currents of the 3 phases, which are added to correct the phase currents, are displayed. The sum of the 3 corrected phase currents is displayed in index 6.		

r0070	CO: Actual DC link voltage / Vdc act val		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6723, 6724, 6730, 6731, 6799
	P-Group: Displays, signals	Unit group: 5_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Display and connector output for the measured actual value of the DC link voltage.		
Dependency:	Refer to: r0026		
Notice:	For SINAMICS S120 AC Drive (AC/AC) the following applies: When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24V power supply is connected, a value of approx. 24 V is displayed.		
Note:	The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
r0070	CO: Actual DC link voltage / Vdc act val		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8750, 8850, 8910, 8940, 8950, 8964
	P-Group: Displays, signals	Unit group: 5_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Display and connector output for the measured actual value of the DC link voltage.		
Dependency:	Refer to: r0026		
Note:	The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).		
r0071	Maximum output voltage / U_output max		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6301, 6640, 6700, 6722, 6723, 6724, 6725, 6727
	P-Group: Displays, signals	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the maximum output voltage.		
Dependency:	The maximum output voltage depends on the actual DC link voltage (r0070) and the maximum modulation depth (p1803).		
Note:	As the (driven) motor load increases, the maximum output voltage drops as a result of the reduction in DC link voltage.		
r0072	CO: Output voltage / U_output		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5700, 5730, 6730, 6731, 6799
	P-Group: Displays, signals	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Display and connector output for the actual output voltage of the power unit (Motor Module).		
Dependency:	Refer to: r0025		
Note:	The output voltage is available smoothed (r0025) and unsmoothed (r0072).		

2 Parameters

2.2 List of parameters

r0073	Maximum modulation depth / Modulat_depth max		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6723, 6724, 6725
	P-Group: Modulation Not for motor type: -	Unit group: - Scaling: PERCENT	Unit selection: - Expert list: 1
	Min - [%]	Max - [%]	Factory setting - [%]
Description:	Displays the maximum modulation depth.		
Dependency:	Refer to: p1803		
r0074	CO: Modulat_depth / Mod_depth		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5730, 6730, 6731, 6799, 8940, 8950
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: PERCENT	Unit selection: - Expert list: 1
	Min - [%]	Max - [%]	Factory setting - [%]
Description:	Display and connector output for the actual modulation depth.		
Dependency:	Refer to: r0028		
Note:	For space vector modulation, 100% corresponds to the maximum output voltage without overcontrol. Values above 100 % indicate an overcontrol condition - values below 100% have no overcontrol. The phase voltage (phase-to-phase, rms) is calculated as follows: $(r0074 \times r0070) / (\sqrt{2} \times 100 \%)$. The modulation depth is available smoothed (r0028) and unsmoothed (r0074).		
r0075	CO: Current setpoint field-generating / Id_set		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6700, 6714, 6725
	P-Group: Displays, signals Not for motor type: REL	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Display and connector output for the field-generating current setpoint (Id_set).		
Note:	This value is irrelevant for the U/f control mode.		
r0076[0...1]	CO: Current actual value field-generating / Id_act		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5700, 5714, 5730, 6700, 6714, 6799
	P-Group: Displays, signals Not for motor type: -	Unit group: 6_2 Scaling: p2002	Unit selection: p0505 Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Display and connector output for the field-generating current actual value (Id_act).		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0029		
Note:	This value is irrelevant for the U/f control mode. The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).		

r0077	CO: Current setpoint torque-generating / Iq_set		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6700, 6710
	P-Group: Displays, signals	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Display and connector output for the torque/force-generating current setpoint.		
Note:	This value is irrelevant for the U/f control mode.		

r0078[0...1]	CO: Current actual value torque-generating / Iq_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6310, 6700, 6714, 6799
	P-Group: Displays, signals	Unit group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Display and connector output for the torque-generating current actual value (Iq_act).		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0030		
Note:	This value is irrelevant for the U/f control mode. The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).		

r0079	CO: Torque setpoint / M_set		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6020, 6060, 6710
	P-Group: Displays, signals	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the torque setpoint at the output of the speed controller.		

r0080[0...1]	CO: Torque actual value / M_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714, 6799
	P-Group: Displays, signals	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for actual torque value.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045		
Dependency:	Refer to: r0031, p0045		
Note:	The value is available smoothed (r0031 with 100 ms, r0080[1] with p0045) and unsmoothed (r0080[0]).		

r0081	CO: Torque utilization / M_Utilization		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8012
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the torque utilization as a percentage. The torque utilization is obtained from the required smoothed torque referred to the torque limit.		
Dependency:	Refer to: r0033		
Note:	The torque utilization is available smoothed (r0033) and unsmoothed (r0081). The torque utilization is obtained from the required torque referred to the torque limit as follows: - Positive torque: $r0081 = (r0079 / r1538) * 100 \%$ - Negative torque: $r0081 = (-r0079 / -r1539) * 100 \%$		
r0082[0...2]	CO: Active power actual value / P_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714, 6799
	P-Group: Displays, signals	Unit group: 14_5	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Displays the instantaneous active power.		
Index:	[0] = Unsmoothed [1] = Smoothed with p0045 [2] = Electric power		
Dependency:	Refer to: r0032		
Note:	The mechanical active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).		
r0082	CO: Active power actual value / P_act		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8750, 8850, 8950
	P-Group: Displays, signals	Unit group: 14_7	Unit selection: p0505
	Not for motor type: -	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Displays the instantaneous active power.		
Dependency:	Refer to: r0032		
Notice:	For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.		
Note:	The active power is available smoothed (r0032) and unsmoothed (r0082).		
r0083	CO: Flux setpoint / Flex setp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the flux setpoint.		

r0084[0...1]	CO: Flux actual value / Flux act val		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6726, 6730, 6732
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: PERCENT	Unit selection: - Expert list: 1
	Min - [%]	Max - [%]	Factory setting - [%]
Description:	Displays the flux actual value.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Note:	The flux actual value (index 1) smoothed with p1585 is only displayed for separately excited synchronous motors. In the following cases, the unsmoothed flux actual value is also displayed: - in the range of the current model. - during the pole position identification. - for I/f control. - for a stalled drive.		
r0087	CO: Actual power factor / Cos phi act		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 6714, 6730, 6732, 6799
	P-Group: Displays, signals Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays the actual active power factor.		
r0088	CO: DC link voltage setpoint / Vdc setpoint		
VECTOR_G (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: -
	P-Group: Displays, signals Not for motor type: -	Unit group: 5_2 Scaling: p2001	Unit selection: p0505 Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Display and connector output for the DC link voltage setpoint.		
r0089[0...2]	Actual phase voltage / U_phase act val		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 5730, 6730
	P-Group: Displays, signals Not for motor type: -	Unit group: 5_3 Scaling: p2001	Unit selection: p0505 Expert list: 1
	Min - [V]	Max - [V]	Factory setting - [V]
Description:	Displays the actual phase voltage.		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		
Note:	The values are determined from the transistor switch-on duration.		

p0092	Clock synchronous operation pre-assignment/check / CI sync op pre-as		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(1)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	<p>Setting to pre-assign/check the sampling times for the internal controller clock cycles for isochronous PROFIdrive operation.</p> <p>For p0092 = 0:</p> <p>The controller clock cycles are set without any restrictions by the isochronous PROFIdrive operation (same as for up to V2.3).</p> <p>When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).</p> <p>For p0092 = 1:</p> <p>The controller clock cycles are set so that isochronous PROFIdrive operation is possible. If it is not possible to change the controller clock cycles of the isochronous PROFIdrive operation, then an appropriate message is output.</p> <p>The pre-setting of the controller clock cycles can result in a derating of the Motor Module (e.g. p0115[0] = 400 µs --> 375 µs).</p> <p>When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).</p>		
Value:	<p>0: No isochronous PROFIBUS</p> <p>1: Isochronous PROFIBUS</p>		
Dependency:	<p>Refer to: r0110, p0115</p> <p>Refer to: A01223, A01224</p>		
Caution:	<p>Only current controller sampling times (p0115[0]) which are integers of 125 µs are permitted for isochronous mode.</p> <p>For SERVO the following current controller sampling times are also possible:</p> <p>187.5, 150, 100, 93.75, 75, 62.5, 50, 37.5, 31.25 µs</p> <p>For VECTOR the following current controller sampling times are also possible:</p> <p>312.5, 218.75, 200, 187.5, 175, 156.25, 150, 137.5 µs</p> <p>The additional current controller sampling times must be taken into account when parameterizing the bus for Ti, To and Tdp.</p>		
			
Notice:	<p>p0092 only has an influence on the automatic default for the sampling times (p0115) in the drive.</p> <p>If the sampling times are modified subsequently in expert mode (p0112 = 0), p0092 = 0 should be set so that the new values are not overwritten again by the automatic default when the parameters are downloaded.</p> <p>The conditions for current controller sampling time for isochronous operation must still be carefully ensured (refer under Caution!).</p>		

r0094	CO: Transformation angle / Transformat_angle		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 4700, 4702, 4710, 6300, 6714, 6730, 6731, 6732
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the transformation angle.		
Dependency:	Refer to: p0431, r1778		
Note:	<p>The transformation angle corresponds to the electrical commutation angle.</p> <p>If no pole position identification is carried out (p1982), and the encoder is adjusted, the following applies:</p> <p>The encoder supplies the value and indicates the electrical angle of the flux position (d axis).</p>		

p0097		Select drive object type / Select DO type		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(1)	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Topology	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	24	0	
Description:	Executes an automatic device configuration. In so doing, p0099, p0107 and p0108 are appropriately set.			
Value:	0: No selection 1: Drive object type SERVO 2: Drive object type VECTOR 3: SINAMICS GM (DFEMV & VECTORMV) 4: SINAMICS SM (AFEMV & VECTORMV) 5: SINAMICS GL (VECTORGL) 6: SINAMICS SL (VECTORSL) 12: Drive object type VECTOR parallel circuit 13: Drive object type VECTORMV - GM parallel circuit 14: Drive object type VECTORMV - SM parallel circuit 15: Drive object type DC_CTRL 16: Drive object type SERVO HMI 17: Drive object type VECTOR HMI 24: Drive object type VECTORMV - SM parallel circuit			
Dependency:	Refer to: r0098, p0099 Refer to: A01330			
Note:	For p0097 = 0, p0099 is automatically set to the factory setting. The possible settings are dependent upon the device type. Using parameter p9940.2, for SERVO (value=1) and VECTOR (value=2) drive objects, the infeed units can be connected in parallel.			

r0098[0...5]		Actual device topology / Device_act topo		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 1	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Topology	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the automatically detected actual device topology in coded form.			
Index:	[0] = DRIVE-CLiQ socket X100 [1] = DRIVE-CLiQ socket X101 [2] = DRIVE-CLiQ socket X102 [3] = DRIVE-CLiQ socket X103 [4] = DRIVE-CLiQ socket X104 [5] = DRIVE-CLiQ socket X105			
Dependency:	Refer to: p0097, p0099			
Note:	Topology coding: abcd efgh hex a = number of Active Line Modules b = number of Motor Modules c = number of motors d = number of encoders (or the line supply voltage sensing for Active Line Modules) e = number of additional encoders (or the line supply voltage sensing for Active Line Modules) f = number of Terminal Modules			

2 Parameters

2.2 List of parameters

g = number of Terminal Boards

h = reserved

if the value 0 is displayed in all indices, then components are not detected via DRIVE-CLiQ.

If a value F hex occurs at a position of the coding (abcd efgh hex), then an overflow has occurred.

p0099[0...5]	Device target topology / Device_target topo		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(1) Data type: Unsigned32 P-Group: Topology Not for motor type: - Min 0000 hex	Calculated: - Dyn. index: - Unit group: - Scaling: - Max FFFF FFFF hex	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the device target topology in coded form (refer to r0098). The setting is made during commissioning. Deactivated or non-available components are also counted		
Index:	[0] = DRIVE-CLiQ socket X100 [1] = DRIVE-CLiQ socket X101 [2] = DRIVE-CLiQ socket X102 [3] = DRIVE-CLiQ socket X103 [4] = DRIVE-CLiQ socket X104 [5] = DRIVE-CLiQ socket X105		
Dependency:	The parameter can only be written into for p0097 = 0. To perform an automatic device configuration run, an index of the device target topology must be set to the value of the device actual topology in r0098 for acknowledgment. An index of the device actual topology with a value other than 0 must be selected. Refer to: p0097, r0098 Refer to: A01330		
Note:	The parameter can only be set to the values 0, the value of the actual device topology, the value of the actual device target topology and FFFFFFFF hex. If the value 0 is displayed in all of the indices, then the system has still not been commissioned. The value FFFFFFFF hex indicates that the topology was not generated by the automatic device configuration, but was commissioned using the commissioning tool (e.g. using parameter download).		

p0100	IEC/NEMA Standards / IEC/NEMA Standards		
VECTOR_G	Can be changed: C2(1, 2) Data type: Integer16 P-Group: Converter Not for motor type: SESM Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Defines whether the converter and motor power settings (e.g. rated motor power, p0307) are expressed in [kW] or [hp]. Depending on the selection, the rated motor frequency (p0310) is either set to 50 Hz or 60 Hz. For p0100 = 0, the following applies: The power factor (p0308) should be parameterized. For p0100 = 1, the following applies: The efficiency (p0309) should be parameterized.		
Value:	0: IEC (50 Hz line, SI units) 1: NEMA (60 Hz line, US units)		
Dependency:	If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made. The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969). Refer to: r0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p1800		
Note:	The parameter can only be changed for vector control (p0107). The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).		

p0101[0...n]	Drive object numbers / DO numbers		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(1)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Topology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	62	0
Description:	The parameter contains the object number via which every drive object can be addressed. The number of an existing drive object is entered into each index. Value = 0: No drive object is defined.		
Note:	The numbers are automatically allocated. For the commissioning tool, this object number cannot be entered using the expert list, but is automatically assigned when inserting an object.		
r0102[0...1]	Number of drive objects / DO count		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Topology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of existing or existing and prepared drive objects.		
Index:	[0] = Existing drive objects [1] = Existing and prepared drive objects		
Dependency:	Refer to: p0101		
Note:	The numbers of the drive objects are in p0101. For index [0]: Displays the number of drive objects that have already been set up. For index [1]: Displays the number of drive objects that have already been set up and, in addition, the drive objects that still have to be set up.		
p0103[0...n]	Application-specific view / Appl_spec view		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(2)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	999	0
Description:	The application-specific view of an existing drive object is entered into each index. The parameter cannot be changed.		
Dependency:	Refer to: p0107, r0107		
Note:	In the non-volatile memory, the application-specific views are defined in files with the following structure: PDxxxxyy.ACX xxx: Application-specific view (p0103) yyy: Type of drive object (p0107) Example: PD052011.ACX --> "011" stands for the drive object, type SERVO --> "052" is the number of the view for this drive object		

r0103	Application-specific view / Appl_spec view		
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	-
Description:	Displays the application-specific view of the individual drive object.		
Dependency:	Refer to: p0107, r0107		

p0105	Activate/deactivate drive object / DO act/deact		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1
Description:	Setting to activate/deactivate a drive object.		
Value:	0: Deactivate drive object 1: Activate drive object		
Dependency:	Refer to: r0106		
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.		

p0105	Activate/deactivate drive object / DO act/deact		
VECTOR_G, B_INF, TM120, TM150, TB30, ENC, HUB	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting to activate/deactivate a drive object.		
Value:	0: Deactivate drive object 1: Activate drive object 2: Drive object deactivate and not present		
Dependency:	When activating drive objects with the safety functions enabled, the following applies: After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out. Refer to: r0106 Refer to: A01314		
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.		
Note:	For value = 0, 2: When a drive object is deactivated it no longer outputs any errors. If value = 0: All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error. If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all. If value = 1: All components of the drive object must be available for error-free operation.		

If value = 2:

Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

p0105	Activate/deactivate drive object / DO act/deact		
TM31	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting to activate/deactivate a drive object.		
Value:	0: Deactivate drive object 1: Activate drive object 2: Drive object deactivate and not present		
Dependency:	Refer to: r0106 Refer to: A01314		
Warning:	A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while this parameter is being changed over.		
			
Notice:	The following applies when activating: If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.		
Note:	For value = 0, 2: When a drive object is deactivated it no longer outputs any errors. If value = 0: All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error. If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all. If value = 1: All components of the drive object must be available for error-free operation. If value = 2: Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line. For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.		

p0105	Activate/deactivate drive object / DO act/deact		
TM54F_MA, TM54F_SL	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting to activate/deactivate a drive object.		
Value:	0: Deactivate drive object 1: Activate drive object 2: Drive object deactivate and not present		
Dependency:	TM54F can only be deactivated if all of the drives assigned to it via p10010 have been deactivated or safety on the assigned drives has not be enabled. When activating drive objects with the safety functions enabled, the following applies: After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out. Refer to: r0106 Refer to: A01314		

2 Parameters

2.2 List of parameters

Notice: The following applies when activating:
If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: For value = 0, 2:
When a drive object is deactivated it no longer outputs any errors.
If value = 0:
All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error.
If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all.
If value = 1:
All components of the drive object must be available for error-free operation.
If value = 2:
Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.
For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

r0106	Drive object active/inactive / DO act/inact		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC, HUB	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the "active/inactive" state of a drive object.		
Value:	0: Drive object inactive 1: Drive object active		
Dependency:	Refer to: p0105		

p0107[0...n]	Drive object type / DO type		
CU_G130_PN, CU_G130_DP	Can be changed: C1(2) Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The type of an existing drive object is entered into each index.		
Value:	0: - 2: SINAMICS G 12: VECTOR 100: TB30 (Terminal Board) 150: DRIVE-CLiQ Hub Module 200: TM31 (Terminal Module) 205: TM54F - Master (Terminal Module) 206: TM54F - Slave (Terminal Module) 207: TM120 (Terminal Module) 208: TM150 (Terminal Module) 300: ENCODER		
Dependency:	Refer to: p0103, r0103		
Caution:	If you change this parameter and exit the device commissioning mode, then the complete software will be set up again and all of the previous drive parameter settings are deleted.		
			
Note:	The number (p0101) and the associated drive object type are in the same index. For SINAMICS S a drive object type can only be changed between SERVO and VECTOR. If you change the parameter and exit drive start-up (p0009 from 2 to 0) the drive parameters are set up again.		

p0107[0...n]		Drive object type / DO type	
CU_G150_PN, CU_G150_DP	Can be changed: C1(2) Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The type of an existing drive object is entered into each index.		
Value:	0: - 2: SINAMICS G 12: VECTOR 30: BASIC INFEED CONTROL 100: TB30 (Terminal Board) 150: DRIVE-CLiQ Hub Module 200: TM31 (Terminal Module) 205: TM54F - Master (Terminal Module) 206: TM54F - Slave (Terminal Module) 207: TM120 (Terminal Module) 208: TM150 (Terminal Module) 300: ENCODER		
Dependency:	Refer to: p0103, r0103		
Caution:	If you change this parameter and exit the device commissioning mode, then the complete software will be set up again and all of the previous drive parameter settings are deleted.		
			
Note:	The number (p0101) and the associated drive object type are in the same index. For SINAMICS S a drive object type can only be changed between SERVO and VECTOR. If you change the parameter and exit drive start-up (p0009 from 2 to 0) the drive parameters are set up again.		

r0107		Drive object type / DO type	
VECTOR_G	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 12	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 12	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.		
Value:	12: VECTOR		
Dependency:	Refer to: p0103, r0103		

r0107		Drive object type / DO type	
B_INF	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 30	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 30	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.		
Value:	30: BASIC INFEED CONTROL		
Dependency:	Refer to: p0103, r0103		

2 Parameters

2.2 List of parameters

r0107	Drive object type / DO type		
TM120	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 207	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 207	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.		
Value:	207: TM120 (Terminal Module)		
Dependency:	Refer to: p0103, r0103		

r0107	Drive object type / DO type		
TM150	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 208	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 208	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.		
Value:	208: TM150 (Terminal Module)		
Dependency:	Refer to: p0103, r0103		

r0107	Drive object type / DO type		
TM31	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 200	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 200	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.		
Value:	200: TM31 (Terminal Module)		
Dependency:	Refer to: p0103, r0103		

r0107	Drive object type / DO type		
TB30	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 100	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.		
Value:	100: TB30 (Terminal Board)		
Dependency:	Refer to: p0103, r0103		

r0107	Drive object type / DO type		
TM54F_MA	Can be changed: - Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 205	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 205	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of each drive object.

	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).
 The following bits are available for the Control Unit (Index 0):
 Bit 18: Free function blocks
 Bit 29: CAN
 Bit 30: COMM BOARD
 Bit 31: PROFINET
 For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0108 of the drive object.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	ON	OFF	-
	01	Bit 1	ON	OFF	-
	02	Bit 2	ON	OFF	-
	03	Bit 3	ON	OFF	-
	04	Bit 4	ON	OFF	-
	05	Bit 5	ON	OFF	-
	06	Bit 6	ON	OFF	-
	07	Bit 7	ON	OFF	-
	08	Bit 8	ON	OFF	-
	09	Bit 9	ON	OFF	-
	10	Bit 10	ON	OFF	-
	11	Bit 11	ON	OFF	-
	12	Bit 12	ON	OFF	-
	13	Bit 13	ON	OFF	-
	14	Bit 14	ON	OFF	-
	15	Bit 15	ON	OFF	-
	16	Bit 16	ON	OFF	-
	17	Bit 17	ON	OFF	-
	18	Bit 18	ON	OFF	-
	19	Bit 19	ON	OFF	-
	20	Bit 20	ON	OFF	-
	21	Bit 21	ON	OFF	-
	22	Bit 22	ON	OFF	-
	23	Bit 23	ON	OFF	-
	24	Bit 24	ON	OFF	-
	25	Bit 25	ON	OFF	-
	26	Bit 26	ON	OFF	-
	27	Bit 27	ON	OFF	-
	28	Bit 28	ON	OFF	-
	29	Bit 29	ON	OFF	-
	30	Bit 30	ON	OFF	-
	31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.
 Refer to: p0171, r0171, p0172, r0172, p0173, r0173
 Refer to: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

r0108		Drive objects function module / DO fct_mod			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Closed-loop control	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the activated function module for the particular drive object.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	02	Speed/torque control / n/M	Activated	Not activated	-
	05	Recorder / Rec	Activated	Not activated	-
	08	Extended setpoint channel / Ext setp	Activated	Not activated	-
	10	Moment of inertia estimator / OBT / J_estimator / OBT	Activated	Not activated	-
	13	Safety rotary axis / Safety rot	Activated	Not activated	-
	14	Extended brake control / Ext brake	Activated	Not activated	-
	15	Parallel connection / Parallel	Activated	Not activated	-
	16	Technology controller / Tech_ctrl	Activated	Not activated	-
	17	Extended messages/monitoring / Ext msg	Activated	Not activated	-
	18	Free function blocks / FBLOCKS	Activated	Not activated	-
	20	Software gating unit / SW_gating unit	Activated	Not activated	-
	24	PM330 / PM330	Activated	Not activated	-
	28	Cooling unit / Cool_unit	Activated	Activated	-
	29	CAN / CAN	Activated	Not activated	-
	31	PROFINET CBE20 / PN CBE20	Activated	Not activated	-
Dependency:	Refer to: p0171, r0171, p0172, r0172, p0173, r0173				
Note:	A "function module" is a functional expansion of a drive object that can be activated when commissioning. The following bits are only automatically set, if the power units are detected with the appropriate properties. Bit 15: Parallel connection of identical power units (only automatically set for G130/G150). Bit 20: Software gating unit (only automatically set when power units are connected in parallel). Bit 24: Type PM330 power units are presently not supported. Bit 26: Type PM250 power units with F3E energy recovery are only supported for S120 CRANES. Bit 28: Power units with liquid cooling.

Value:	<p>0: Expert</p> <p>1: xLow</p> <p>2: Low</p> <p>3: Standard</p> <p>4: High</p> <p>5: xHigh</p>			
Recommendation:	<p>When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.</p>			

- Dependency:** It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).
If, for a servo drive, p112 = 5 is set, then the pulse frequency p1800 is pre-assigned 8 kHz. For D410-2 and vector drive, the current controller sampling time can only be permanently changed for p0112 = 0.
Refer to: p0092
- Note:** For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.
The setting p0112 = 1 cannot be set for a vector drive with power unit type PM340 (refer to r0203).

p0113 Minimum pulse frequency, selection / f_puls min sel

VECTOR_G	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000 [kHz]	2.000 [kHz]	2.000 [kHz]

- Description:** The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.
- Dependency:** The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller sampling time of 125 μ s is obtained as an integer number.
The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0), assuming that this has not been restricted by other conditions (e.g. as a result of p1082, p0310).
Refer to: p0112, r0114, p0115, p1800
- Note:** The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 1.0 kHz, p0115[0] = 500 μ s is set, for p0113 = 2.0 kHz, p0115[0] = 250 μ s is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 μ s.
For a power unit type PM340 (refer to r0203), only the values 1.0 and 2.0 kHz can be set. A value of 1.0 kHz can be set in order to achieve a current controller sampling time of 500 μ s. However, in this case, the minimum pulse frequency p1800 is limited to 2 kHz.

r0114[0...9] Minimum pulse frequency recommended / f_puls min recom

VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kHz]	- [kHz]	- [kHz]

- Description:** Displays the recommended values (indices 0 and 1) for the minimum pulse frequency (p0113).
If the system rejects a change to p0113 because the value to be used lies outside the permitted value range, then instead the recommended value from r0114 can be used.
- Index:**
[0] = If only the actual drive is changed
[1] = If all drives connected to the DRIVE-CLiQ line are changed
[2] = 2nd possible pulse frequency
[3] = 3rd possible pulse frequency
[4] = 4th possible pulse frequency
[5] = 5th possible pulse frequency
[6] = 6th possible pulse frequency
[7] = 7th possible pulse frequency
[8] = 8th possible pulse frequency
[9] = 9th possible pulse frequency
- Dependency:** Refer to: p0113
- Note:** After exiting commissioning (p0009 = p0010 = 0), the pulse frequencies calculated from the sampling time p0115[0] are displayed in indices 1 to 9. If additional restrictions do not apply (e.g. as a result of the maximum speed (p1082) or due to having selected an output filter), these can be entered into p1800. The maximum pulse frequency of the power units was already taken into account in r0114.
A value of 0 kHz does not define a recommended pulse frequency.

p0115[0]	Sampling time for supplementary functions / t_samp suppl_fct		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	16000.00 [µs]	4000.00 [µs]
Description:	Sets the basic sampling time for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125 µs are permissible.		
Index:	[0] = Basic sampling time		
p0115[0...6]	Sampling times for internal control loops / t_sample int ctrl		
VECTOR_G	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	16000.00 [µs]	[0] 250.00 [µs] [1] 1000.00 [µs] [2] 1000.00 [µs] [3] 1000.00 [µs] [4] 2000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]
Description:	Sets the sampling times for the control loops. The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).		
Recommendation:	When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4. When adjusting the current controller sampling time, it is recommended to use values that are an integer multiple of 6.25 µs. The sampling times of analog or digital inputs/outputs (see p0799, p4099) should be set to an integer multiple of the current controller sampling time. If the current controller sampling time is to be reduced with respect to the default setting (e.g. < 250 µs), then it is recommended that the motor data identification (standstill measurement) is executed beforehand, in order to avoid a thermal overload of the power unit as a result of high pulse frequencies (p1800).		
Index:	[0] = Current controller [1] = Speed controller [2] = Flux controller [3] = Setpoint channel [4] = Position controller [5] = Positioning [6] = Technology controller		
Dependency:	Depending on the number and type of vector drives, the sampling times are preset differently. The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms. Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]). The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]). The sampling time of the current controller p0115[0] and pulse frequency p1800 are checked at each parameter download, and when necessary changed, if, for p0092 = 1, the current controller sampling time is not an integral multiple of 125 µs or if p0112 is set > 1. For p0092 = 0, the check with p0112 = 0 (= expert) can be deactivated. Refer to: r0110, r0111, p0112		

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.
 For power unit type PM340 (r0203), only current controller sampling times of 250 µs or 500 µs can be set. The minimum current controller sampling time is otherwise 125 µs (SINAMICS G: 250 µs), the maximum current controller sampling time is 500 µs. For SINAMICS G, the minimum speed controller sampling time is 1 ms.
 Current controller sampling times of less than 250 µs are restricted by the number of drives or by the number of power units connected in parallel (also see F01340).
 For chassis power units connected in parallel, it is recommended to connect the DRIVE-CLiQ cables (partially) in parallel between the Control Unit and the individual Motor Modules.
 For D410-2, the current controller sampling times can only be permanently changed with p0112 = 0 (e.g. to 250 µs).

p0115[0...6]	Sampling times for internal control loops / t_sample int ctrl		
B_INF	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	16000.00 [µs]	[0] 125.00 [µs] [1] 125.00 [µs] [2] 125.00 [µs] [3] 4000.00 [µs] [4] 1000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.

The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommendation: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Index:
 [0] = Current controller
 [1] = Speed controller
 [2] = Flux controller
 [3] = Setpoint channel
 [4] = Position controller
 [5] = Positioning
 [6] = Technology controller

Dependency: The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.

Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. $p0115[1] = N * p0115[0]$; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]).

For servo drives, the maximum sampling time of the current controller is 250 µs and for vector drives, 500 µs.

The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]).

Refer to: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.
 For the Active Line Module (ALM) and Smart Line Module (SLM), the current and DC link voltage controllers operate with the same sampling time. For ALM/SLM the maximum current controller sampling time is 400 µs.
 For the Basic Line Module (BLM), the DC link voltage measurement operates in the current controller sampling time. For BLM booksize, only the current controller sampling time of 250 µs is permitted. For BLM chassis, only the current controller sampling time of 2000 µs is permitted.
 For power unit type PM340 (r0203), only current controller sampling times of 62.5 µs, 125 µs, 250 µs and 500 µs can be set. The maximum current controller sampling time for servo drives and the minimum current controller sampling time for vector drives is 250 µs.
 If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) are always greater than or equal to twice the current controller sampling time (p0115[0]).

2 Parameters

2.2 List of parameters

p0115[0]	Sampling time for supplementary functions / t_samp suppl_fct		
TM120	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	16000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling times for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125 µs are permissible.		
Index:	[0] = Basic sampling time		
p0115[0]	Sampling time for supplementary functions / t_samp suppl_fct		
TM31, TM150, TB30	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	16000.00 [µs]	4000.00 [µs]
Description:	Sets the sampling times for supplementary functions (DCC, free function blocks) on this object. Only setting values that are an integer multiple of 125 µs are permissible.		
Index:	[0] = Basic sampling time		
Note:	This parameter only applies to set the sampling times of possible supplementary functions. The sampling times for inputs/outputs must be set in p4099.		
p0115[0]	Sampling time for speed detection / t_sample n_det		
ENC	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	125.00 [µs]	500.00 [µs]	125.00 [µs]
Description:	Sets the sampling times for speed detection.		
Index:	[0] = Basic sampling time		
r0116[0...1]	Drive object clock cycle recommended / DO_clock recom		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TB30	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [µs]	- [µs]	- [µs]
Description:	Displays the recommended sampling time for the drive objects. r00116[0] = recommended sampling time: Recommended value which would then make the complete system operational. r00116[1] = recommended sampling time: Recommended value, which after changing other clock cycles on the DRIVE-CLiQ line, would result in an operational system.		
Index:	[0] = Change only for the actual drive object [1] = Changing all objects on the DRIVE-CLiQ line		
Dependency:	Refer to: p0115		

p0117		Current controller computing dead time mode / I_ctrl t_dead mode		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	6	6	
Description:	Sets the mode for the computing dead time of the current controller. 0: Offset (shifted) clocking, minimum computing dead time of each drive, automatic setting 1: Clocking at the same time, the dead time aligns itself to the dead time of the latest drive, automatic setting 2: Manual setting of the computing dead time, early transfer 3: Manual setting of the computing dead time, late transfer 4-6: As for 0-2, however, no early transfers are set for vectors			
Dependency:	Refer to: p0118 Refer to: A02100			
Note:	The mode change is not effective until the drive unit is switched on again. For p0117 = 0: The times when the setpoints become effective for the individual controls is automatically and individually determined. Another computing dead time is set for each control (closed-loop) (p0118). Current is impressed for the individual controls without any offset with respect to time (improved EMC compatibility). For p0117 = 1: The latest closed-loop control determines when the setpoints for each of the individual controls become active. The same computing dead time is set for each control (p0118). Current is impressed (flows) for the individual controls without any offset with respect to time. For p0117 = 2: The computing dead time is manually set. The user must optimize the value in p0118. For p0117 = 3: The computing dead time is manually set. The user must optimize the value in p0118. For p0117 = 4 ... 6: Behavior as for p0117 = 0 ... 2, however for vectors, the earliest times are not determined.			
p0118		Current controller computing dead time / I_ctrl t_dead		
VECTOR_G, B_INF	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [µs]	2000.00 [µs]	0.00 [µs]	
Description:	This parameter is pre-set as a function of the current controller sampling time (p0115[0]) and normally does not have to be changed.			
Dependency:	Refer to: p0117 Refer to: A02100			
Note:	For p0118 ≤ 0.005 µs, the current controller output is delayed by a complete current controller sampling time (p0115[0]). After p0118 has been changed, we recommend that the current controller is adapted (p1715).			

2 Parameters

2.2 List of parameters

p0120	Number of Power unit Data Sets (PDS) / PDS count		
VECTOR_G, B_INF	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 8	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of Power unit Data Sets (PDS). The value corresponds to the number of power units connected together for a parallel circuit configuration.		
Dependency:	Refer to: p0107, r0107		
Note:	This parameter is only significant for drive objects A_INF and VECTOR with a parallel circuit configuration.		
<hr/>			
p0121[0...n]	Power unit component number / PU comp_no		
VECTOR_G, B_INF	Can be changed: C1(4), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 199	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The power unit data set is assigned to a power unit using this parameter. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a power unit.		
Dependency:	Refer to: p0107, r0107		
Note:	For parallel circuit configurations, the parameter index is assigned to a power unit.		
<hr/>			
p0124[0...n]	Main component detection using LED / M_comp detect LED		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned8 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Detection of the main components of the drive object selected via the index.		
<hr/>			
p0124[0...n]	Power unit detection via LED / PU detection LED		
VECTOR_G, B_INF	Can be changed: U, T Data type: Unsigned8 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Detects the power unit assigned to this drive and data set.		
Note:	While p0124 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate power unit. For parallel circuit configurations, the parameter index is assigned to a power unit.		

p0125[0...n]	Activate/deactivate power unit components / PU_comp act/deact		
VECTOR_G, B_INF	Can be changed: C1(4), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting to activate/deactivate a power unit component.		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0126 Refer to: A01314, A01317		
Caution:	For a parallel connection, the following applies:		
	When deactivating individual power units using this parameter, it is not permissible that the power units of the parallel connection involved are connected. Infeed units should be disconnected from the line supply (for example, using a contactor). Motor feeder cables should be disconnected. In addition, defective power units should be disconnected from the DC link.		
Notice:	It is not permissible to deactivate drive objects with safety functions enabled.		
Note:	The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited. For units connected in parallel, when one of the power units is deactivated, then the enable in p7001 is withdrawn. For value = 0, 2: When a component is deactivated it no longer outputs any errors. If value = 0: The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error. If value = 1: The component must be available for error-free operation. If value = 2: A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the component is marked to be bypassed in the DRIVE-CLiQ line. For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.		

r0126[0...n]	Power unit components active/inactive / PU comp act/inact		
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active/inactive" state of a power unit component.		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0105, p0125, p0897		

2 Parameters

2.2 List of parameters

r0127[0...n] Power unit EEPROM data version / PU EEPROM version			
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the power unit.		
Dependency:	Refer to: r0147, r0157		
Note:	For parallel circuit configurations, the parameter index is assigned to a power unit.		
r0128[0...n] Power unit firmware version / PU FW version			
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the power unit.		
Dependency:	Refer to: r0018, r0148, r0158, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00. For parallel circuit configurations, the parameter index is assigned to a power unit.		
p0130 Number of Motor Data Sets (MDS) / MDS count			
VECTOR_G	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8575
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	16	1
Description:	Sets the number of Motor Data Sets (MDS).		
p0131[0...n] Motor component number / Mot comp_no			
VECTOR_G	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	The motor data set is assigned to a motor using this parameter. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a motor.		

p0133[0...n]		Motor configuration / Motor config												
VECTOR_G	Can be changed: C2(1, 3) Data type: Unsigned16 P-Group: Motor Not for motor type: PMSM, SESM, REL Min -	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin											
Description:	Configuration of the motor when commissioning the motor.													
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Motor connection type</td> <td>Delta</td> <td>Star</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Motor connection type	Delta	Star	-			
Bit	Signal name	1 signal	0 signal	FP										
00	Motor connection type	Delta	Star	-										
Dependency:	For standard induction motors (p0301 > 10000), bit 0 is automatically pre-assigned the connection type of the selected data set. For p0100 > 0 (60 Hz rated motor frequency), it is not possible to select bit 1. Refer to: p0304, p0305													
Note:	For bit 00: When changing the bits, the rated motor voltage p0304 and the rated motor current p0305 are automatically converted to the selected connection type (star/delta). For instance, this can be necessary if an 1LE1 motor is selected using the Article number (MLFB) or code number (p0300 = 100, p0301 = 1x0xx), and the motor connection type does not correspond to that of the data set.													

p0139[0...2]		Copy Motor Data Set MDS / Copy MDS		
VECTOR_G	Can be changed: C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 31	Access level: 2 Func. diagram: 8575 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Copying a Motor Data Set (MDS) into another.			
Index:	[0] = Source motor data set [1] = Target motor data set [2] = Start copying procedure			
Note:	Procedure: 1. In Index 0, enter which motor data set should be copied. 2. In Index 1, enter the motor data set data that is to be copied into. 3. Start copying: set index 2 from 0 to 1. p0139[2] is automatically set to 0 when copying is completed. When copying, p0131 is not taken into account.			

p0140		Number of Encoder Data Sets (EDS) / EDS count		
VECTOR_G	Can be changed: C1(3), C2(15) Data type: Unsigned8 P-Group: Data sets Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16	Access level: 2 Func. diagram: 8570 Unit selection: - Expert list: 1 Factory setting 1	
Description:	Sets the number of Encoder Data Sets (EDS).			
Note:	When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).			

p0140	Number of Encoder Data Sets (EDS) / EDS count		
ENC	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	1	1
Description:	Sets the number of Encoder Data Sets (EDS).		
Note:	When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).		
p0141[0...n]	Encoder interface (Sensor Module) component number / Enc_interf comp_no		
VECTOR_G, ENC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4704, 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	This parameter is used to assign the encoder data set to an encoder evaluation (e.g. SMC). This unique component number is assigned when parameterizing the topology. Only a component number can be entered that corresponds to an encoder evaluation.		
Note:	If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical. For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142). SMC: Sensor Module Cabinet		
p0142[0...n]	Encoder component number / Encoder comp_no		
VECTOR_G, ENC	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4704
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	This parameter is used to assign the encoder data set to an encoder. This assignment is made using the unique component number that was assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to an encoder.		
Note:	If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical. For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).		
p0144[0...n]	Sensor Module detection via LED / SM detection LED		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Detects the Sensor Module assigned to this drive and data set.		
Note:	While p0144 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Sensor Module.		

p0145[0...n]		Activate/deactivate encoder interface / Enc_intf act/deact		
VECTOR_G, ENC	Can be changed: C1(4), U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -	
	P-Group: Data sets	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	2	1	
Description:	Setting to activate/deactivate an encoder interface (Sensor Module).			
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present			
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.			
Dependency:	Refer to: r0146 Refer to: A01314, A01317			
Note:	The deactivation of an encoder interface corresponds to the "parking encoder" function and has the same effect. The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited. With the encoder interface for encoder 1 (motor encoder), the relevant drive object for writing the parameter must be in the "Ready for operation" state. With the encoder interface for encoders 2 and 3, the parameter can also be written during operation. For value = 0, 2: When a component is deactivated it no longer outputs any errors. If value = 0: The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error. If value = 1: The component must be available for error-free operation. If value = 2: A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start. For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.			

r0146[0...n]		Encoder interface active/inactive / Enc_intf act/inact		
VECTOR_G, ENC	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -	
	P-Group: Data sets	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	-	
Description:	Displays the "active" or "inactive" state of an encoder interface (Sensor Module).			
Value:	0: Component inactive 1: Component active			
Dependency:	Refer to: p0105, p0145, p0480, p0897			

r0147[0...n]		Sensor Module EEPROM data version / SM EEPROM version		
VECTOR_G, ENC	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the version of the EEPROM data of the Sensor Module.			
Dependency:	Refer to: r0127, r0157			

2 Parameters

2.2 List of parameters

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0148[0...n]	Sensor Module firmware version / SM FW version		
VECTOR_G, ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the Sensor Module.		
Dependency:	Refer to: r0018, r0128, r0158, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

p0150	Number of VSM data sets / VSM dat_sets qty.		
VECTOR_G	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	2	1
Description:	Sets the number of VSM data sets.		

p0151[0...n]	Voltage Sensing Module component number / VSM comp_no		
VECTOR_G	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	The VSM data set is assigned to a VSM evaluation using this parameter.		
Note:	If two VSM are connected at the Motor Module, then the first (p0151[0]) is assigned to the line voltage measurement (see p3801) and the second, to the motor voltage measurement (see p1200).		

p0151	Terminal Module component number / TM comp_no		
TM31, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the Terminal Module. This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to a Terminal Module.		

p0151[0...1]	DRIVE-CLiQ Hub Module component number / Hub comp_no		
HUB	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	This parameter is used to assign the data set to a DRIVE-CLiQ Hub Module. This unique component number is assigned when parameterizing the topology. Only the numbers of components operated as hubs can be entered in these parameters. [0] = DRIVE-CLiQ node 1 [1] = DRIVE-CLiQ node 2		
p0154	Terminal Module detection via LED / TM detection LED		
TM31, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Detects the Terminal Module assigned to this drive and data set.		
Note:	While p0154 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Terminal Module.		
p0154	DRIVE-CLiQ Hub Module detection via LED / Hub detection LED		
HUB	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Detects any DRIVE-CLiQ Hub Module that has been assigned.		
p0155[0...n]	Voltage Sensing Module activate/deactivate / VSM act/deact		
VECTOR_G	Can be changed: C1(4), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1
Description:	Setting to activate/deactivate a Voltage Sensing Module (VSM).		
Value:	0: Deactivate component 1: Activate component 2: Component deactivate and not present		
Recommendation:	After inserting a component, before activating, first wait for Alarm A01317.		
Dependency:	Refer to: r0156 Refer to: A01314, A01317		

r0156[0...n]	Voltage Sensing Module active/inactive / VSM act/inact		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: p0150	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).		
Value:	0: Component inactive 1: Component active		
Dependency:	Refer to: p0155		

r0157[0...n]	Voltage Sensing Module EEPROM data version / VSM EEPROM version		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Voltage Sensing Module (VSM).		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0157	Terminal Module EEPROM data version / TM EEPROM version		
TM31, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data of the Terminal Module.		
Dependency:	Refer to: r0127, r0147		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0157	DRIVE-CLiQ Hub Module EEPROM data version / Hub EEPROM version		
HUB	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of the EEPROM data for the DRIVE-CLiQ Hub Module.		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r0158[0...n]	Voltage Sensing Module firmware version / VSM FW version		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: p0150	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: r0018, r0128, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r0158	Terminal Module firmware version / TM FW version		
TM31, TM120, TM150, TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the Terminal Module.		
Dependency:	Refer to: r0018, r0128, r0148, r0197, r0198		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r0158	DRIVE-CLiQ Hub Module firmware version / Hub FW version		
HUB	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the firmware version of the DRIVE-CLiQ Hub Module.		
p0161	Option board component number / Opt board comp_no		
TB30	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	199	0
Description:	Sets the component number for the option board (e.g. Terminal Board 30). This unique component number is assigned when parameterizing the topology. Only component numbers can be entered into this parameter that correspond to an option board.		

p0170	Number of Command Data Sets (CDS) / CDS count		
VECTOR_G	Can be changed: C1(3)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	2	4	2
Description:	Sets the number of Command Data Sets (CDS).		
Note:	It is possible to toggle between command parameters (BICO parameters) using this data set changeover.		

p0170	Number of Command Data Sets (CDS) / CDS count		
B_INF	Can be changed: C1(3)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	2	1
Description:	Sets the number of Command Data Sets (CDS).		
Note:	It is possible to toggle between command parameters (BICO parameters) using this data set changeover.		

p0171[0...n]	Drive objects function module 1 / DO fct_mod 1		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(2)	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).
 The following bits are available in p0171 for the Control Unit (Index 0):
 - still none.
 For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0171 of the drive object.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	ON	OFF	-
	01	Bit 1	ON	OFF	-
	02	Bit 2	ON	OFF	-
	03	Bit 3	ON	OFF	-
	04	Bit 4	ON	OFF	-
	05	Bit 5	ON	OFF	-
	06	Bit 6	ON	OFF	-
	07	Bit 7	ON	OFF	-
	08	Bit 8	ON	OFF	-
	09	Bit 9	ON	OFF	-
	10	Bit 10	ON	OFF	-
	11	Bit 11	ON	OFF	-
	12	Bit 12	ON	OFF	-
	13	Bit 13	ON	OFF	-
	14	Bit 14	ON	OFF	-
	15	Bit 15	ON	OFF	-
	16	Bit 16	ON	OFF	-
	17	Bit 17	ON	OFF	-
	18	Bit 18	ON	OFF	-
	19	Bit 19	ON	OFF	-
	20	Bit 20	ON	OFF	-
	21	Bit 21	ON	OFF	-

22	Bit 22	ON	OFF	-
23	Bit 23	ON	OFF	-
24	Bit 24	ON	OFF	-
25	Bit 25	ON	OFF	-
26	Bit 26	ON	OFF	-
27	Bit 27	ON	OFF	-
28	Bit 28	ON	OFF	-
29	Bit 29	ON	OFF	-
30	Bit 30	ON	OFF	-
31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.
Refer to: p0108, r0108, p0172, r0172, p0173, r0173
Refer to: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

r0171 Drive objects function module 1 / DO fct_mod 1

VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the activated function module for the particular drive object.

Dependency: Refer to: p0108, r0108, p0172, r0172, p0173, r0173

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

p0172[0...n] Drive objects function module 2 / DO fct_mod 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(2)	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).

The following bits are available in p0172 for the Control Unit (Index 0):

- still none

For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0172 of the drive object.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	ON	OFF	-
	01	Bit 1	ON	OFF	-
	02	Bit 2	ON	OFF	-
	03	Bit 3	ON	OFF	-
	04	Bit 4	ON	OFF	-
	05	Bit 5	ON	OFF	-
	06	Bit 6	ON	OFF	-
	07	Bit 7	ON	OFF	-
	08	Bit 8	ON	OFF	-
	09	Bit 9	ON	OFF	-
	10	Bit 10	ON	OFF	-
	11	Bit 11	ON	OFF	-
	12	Bit 12	ON	OFF	-
	13	Bit 13	ON	OFF	-
	14	Bit 14	ON	OFF	-
	15	Bit 15	ON	OFF	-
	16	Bit 16	ON	OFF	-
	17	Bit 17	ON	OFF	-
	18	Bit 18	ON	OFF	-

2 Parameters

2.2 List of parameters

19	Bit 19	ON	OFF	-
20	Bit 20	ON	OFF	-
21	Bit 21	ON	OFF	-
22	Bit 22	ON	OFF	-
23	Bit 23	ON	OFF	-
24	Bit 24	ON	OFF	-
25	Bit 25	ON	OFF	-
26	Bit 26	ON	OFF	-
27	Bit 27	ON	OFF	-
28	Bit 28	ON	OFF	-
29	Bit 29	ON	OFF	-
30	Bit 30	ON	OFF	-
31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.

Refer to: p0108, r0108, p0171, r0171, p0173, r0173

Refer to: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

0000 0000 0000 0000 0000
0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).

The following bits are available in p0173 for the Control Unit (Index 0):

- still none

For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0173 of the drive object.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	ON	OFF	-
	01	Bit 1	ON	OFF	-
	02	Bit 2	ON	OFF	-
	03	Bit 3	ON	OFF	-
	04	Bit 4	ON	OFF	-
	05	Bit 5	ON	OFF	-
	06	Bit 6	ON	OFF	-
	07	Bit 7	ON	OFF	-
	08	Bit 8	ON	OFF	-
	09	Bit 9	ON	OFF	-
	10	Bit 10	ON	OFF	-
	11	Bit 11	ON	OFF	-
	12	Bit 12	ON	OFF	-
	13	Bit 13	ON	OFF	-
	14	Bit 14	ON	OFF	-
	15	Bit 15	ON	OFF	-

16	Bit 16	ON	OFF	-
17	Bit 17	ON	OFF	-
18	Bit 18	ON	OFF	-
19	Bit 19	ON	OFF	-
20	Bit 20	ON	OFF	-
21	Bit 21	ON	OFF	-
22	Bit 22	ON	OFF	-
23	Bit 23	ON	OFF	-
24	Bit 24	ON	OFF	-
25	Bit 25	ON	OFF	-
26	Bit 26	ON	OFF	-
27	Bit 27	ON	OFF	-
28	Bit 28	ON	OFF	-
29	Bit 29	ON	OFF	-
30	Bit 30	ON	OFF	-
31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.
Refer to: p0108, r0108, p0171, r0171, p0172, r0172
Refer to: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

r0173 Drive objects function module 3 / DO fct_mod 3

VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the activated function module for the particular drive object.

Dependency: Refer to: p0108, r0108, p0171, r0171, p0172, r0172

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

p0180 Number of Drive Data Sets (DDS) / DDS count

VECTOR_G	Can be changed: C1(3), C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8565
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	32	1

Description: Sets the number of Drive Data Sets (DDS).

p0186[0...n] Motor Data Sets (MDS) number / MDS number

VECTOR_G	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 8575
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	15	0

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Motor Data Set (MDS).
The parameter value therefore corresponds to the number of the assigned motor data set.

p0187[0...n]	Encoder 1 encoder data set number / Enc 1 EDS number				
VECTOR_G	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3		
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 4700, 8570		
	P-Group: Data sets	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	99	99		
Description:	Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 1. The value corresponds to the number of the assigned encoder data set. Example: Encoder 1 in drive data set 2 should be assigned encoder data set 0. --> p0187[2] = 0				
Note:	A value of 99 means that no encoder has been assigned to this drive data set (not configured).				
p0188[0...n]	Encoder 2 encoder data set number / Enc 2 EDS number				
VECTOR_G	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3		
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 4700, 8570		
	P-Group: Data sets	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	99	99		
Description:	Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 2. The value corresponds to the number of the assigned encoder data set. Example: Encoder 2 in drive data set 2 should be assigned to encoder data set 1. --> p0188[2] = 1				
Note:	A value of 99 means that no encoder has been assigned to this drive data set (not configured).				
p0189[0...n]	Encoder 3 encoder data set number / Enc 3 EDS number				
VECTOR_G	Can be changed: C1(4), C2(15)	Calculated: -	Access level: 3		
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: 4700, 8570		
	P-Group: Data sets	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	99	99		
Description:	Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 3. The value corresponds to the number of the assigned encoder data set.				
Note:	A value of 99 means that no encoder has been assigned to this drive data set (not configured).				
r0192	Power unit firmware properties 1 / PU FW property 1				
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Converter	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the properties supported by the power unit firmware.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Edge modulation possible	Yes	No	-
	01	Free telegram can be selected	Yes	No	-

Dependency:

Refer to: r0193

Notice:

This information represents the characteristics/features of the power unit firmware. It does not provide information/data about the characteristics/features of the hardware (e.g. bit 06 = 1 means that although the firmware supports "liquid cooling", a power unit with liquid cooling does not have to be used).

Note:

For bit 09:

The Motor Module supports the internal armature short-circuit. The function is internally required for voltage protection (p1231 = 3).

For bit 10:

The Motor Module supports the autonomous internal voltage protection.

If the "internal voltage protection" function is activated (p1231 = 3) the Motor Module decides autonomously - using the DC link voltage - as to whether the short-circuit is activated.

For bit 23:

The component supports the detection of current actual values (and the detection of valve close durations) with double clocking and phase shift.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Component status bit 0	High	Low	-
	01	Component status bit 1	High	Low	-

	04	Component state	Active	Inactive/parking	-
	06	Topology problem active	Yes	No	-
	07	Part of the target topology	Yes	No only act topo	-
	08	Alarm present	Yes	No	-
	09	Safety message present	Yes	No	-
	10	Fault present	Yes	No	-
	11	Alarm class bit 0	High	Low	-
	12	Alarm class bit 1	High	Low	-
	13	Maintenance required	Yes	No	-
	14	Maintenance urgently required	Yes	No	-
	15	Fault gone/can be acknowledged	Yes	No	-

Note:

For bit 03 ... 00:

Bit 3, 2, 1, 0 = 0, 0, 0, 0 --> component not available.

Bit 3, 2, 1, 0 = 0, 0, 0, 1 --> power up, non-cyclic DRIVE-CLiQ communication (LED = orange).

Bit 3, 2, 1, 0 = 0, 0, 1, 0 --> operating mode, cyclic DRIVE-CLiQ communication (LED = green).

Bit 3, 2, 1, 0 = 0, 0, 1, 1 --> alarm (LED = green).

Bit 3, 2, 1, 0 = 0, 1, 0, 0 --> fault (LED = red).

Bit 3, 2, 1, 0 = 0, 1, 0, 1 --> detection via LED and operating mode (LED = green/orange).

Bit 3, 2, 1, 0 = 0, 1, 1, 0 --> detection via LED and alarm (LED = green/orange).

Bit 3, 2, 1, 0 = 0, 1, 1, 1 --> detection via LED and fault (LED = red/orange).

Bit 3, 2, 1, 0 = 1, 0, 0, 0 --> firmware being downloaded (LED = green/red with 0.5 Hz).

Bit 3, 2, 1, 0 = 1, 0, 0, 1 --> firmware download completed, wait for POWER ON (LED = green/red with 2.0 Hz).

For bits 12 ... 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

Description:	Freely assignable name for a drive object. For the commissioning tool, this name cannot be entered using the expert list, but is specified in the configuration wizards. The object name can be subsequently modified in the Project Navigator using standard Windows resources.		
Note:	The parameter is not influenced by setting the factory setting.		
r0200[0...n]	Power unit code number actual / PU code no. act		
VECTOR_G, B_INF	Can be changed: - Data type: Unsigned16 P-Group: Converter Not for motor type: - Min -	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the unique code number of the power unit.		
Note:	r0200 = p0201: No power unit found For parallel circuit configurations, the parameter index is assigned to a power unit.		
p0201[0...n]	Power unit code number / PU code no		
VECTOR_G	Can be changed: C2(2) Data type: Unsigned16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dyn. index: PDS, p0120 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the actual code number from r0200 to acknowledge the power unit being used. When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.		
Dependency:	Refer to: F07815		
Notice:	When p0201 = 10000, the rated power unit data is reloaded and dependent parameters are set (e.g. p0205, p0210, p0230, p0857, p1800). p0201 is then automatically assigned the value of r0200 if the code number of the power unit could be read. A warm start must be performed after this procedure (automatically if necessary).		

Note: The parameter is used to identify when the drive is being commissioned for the first time.
 The power unit commissioning can only be exited (p0201 = r0200), if the actual and acknowledged code numbers are identical (p0010 = 2). However, if the comparator in p9906 or p9908 is at 2 (low) or 3 (minimum), the power unit commissioning is automatically set to p0201 = r0200 upon exiting.
 When the code number is changed, the connection voltage (p0210) is checked and, if necessary, adjusted.
 For parallel circuit configurations, the parameter index is assigned to a power unit.

p0205		Power unit application / PU application		
VECTOR_G	Can be changed: C2(1, 2)	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Converter	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	7	6	
Description:	Overloading the load duty cycles applies under the prerequisite that before and after the overload, the drive converter is operated with its base load current - in this case, a load duty cycle of 300 s is used as basis. For booksize drive units, the following applies: Only the setting p0205 = 0 can be selected. In this particular case, the base load current has a load duty cycle of 150 % for 60 s and 176 % for 30 s. For chassis units, the following applies: The base load current for a low overload condition is based on a load duty cycle 110 % for 60 s and 150 % for 10 s. The base load current for a high overload condition is based on a load duty cycle 150 % for 60 s and 160 % for 10 s.			
Value:	0: Load duty cycle with high overload 1: Load duty cycle with low overload 6: S1 continuous duty (for servo drives) 7: S6 load duty cycle (for servo drives)			
Note:	When the parameter is changed, all of the motor parameters and the control mode are pre-assigned according to the selected application. The parameter has no influence when calculating the thermal overload. p0205 can only be changed to the settings that are saved in the power unit EEPROM. The parameter value is not reset when the factory setting is restored (see p0010 = 30, p0970).			

r0206[0...4]	Rated power unit power / PU P_{rated}

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [V]	63000 [V]	600 [V]
Description:	Sets the drive unit supply voltage. AC/AC unit: The rms value of the phase-to-phase line supply voltage should be entered. DC/AC unit: The rated DC voltage of the connection busbar should be entered.		
Dependency:	Set p1254, p1294 (automatic detection of the Vdc switch-on levels) = 0. The switch-in thresholds of the Vdc_max controller (r1242, r1282) are then directly determined using p0210. The parameter can be reduced to p0210 = 100 V if p0212.0 = 1 has been set. Refer to: p0212		
Notice:	If, in the switched-off state (pulse inhibit), the supply voltage is higher than the entered value, the Vdc controller may be automatically deactivated in some cases to prevent the motor from accelerating the next time the system is switched on. In this case, an appropriate alarm is output (A07401). For SINAMICS S150 devices, the supply voltage is calculated from the line supply voltage (p0210 of the infeed), and is overwritten each time that the line supply voltage changes.		
Note:	Setting ranges for p0210 as a function of the rated power unit voltage: U _{rated} = 400 V: - p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V (DC/AC) U _{rated} = 500 V: - p0210 = 500 ... 600 V (AC/AC), 675 ... 900 V (DC/AC)		

2 Parameters

2.2 List of parameters

U_{rated} = 660 ... 690 V:

- p0210 = 660 ... 690 V (AC/AC), 890 ... 1035 V (DC/AC)

U_{rated} = 500 ... 690 V:

- p0210 = 500 ... 690 V (AC/AC), 675 ... 1035 V (DC/AC)

The precharging switch-in threshold for the DC link voltage (V_{dc}) is calculated from p0210:

V_{dc_pre} = p0210 * 0.82 * 1.35 (AC/AC)

V_{dc_pre} = p0210 * 0.82 (DC/AC)

The undervoltage thresholds for the DC link voltage (V_{dc}) are calculated from p0210 as a function of the rated power unit voltage:

U_{rated} = 400 V:

- U_{min} = p0210 * 0.78 (AC/AC) > 330 V, p0210 * 0.60 (DC/AC) > 380 V

U_{rated} = 500 V:

- U_{min} = p0210 * 0.76 (AC/AC) > 410 V

U_{rated} = 660 ... 690 V:

- U_{min} = p0210 * 0.82 (AC/AC) > 565 V, p0210 * 0.63 (DC/AC) > 650 V

U_{rated} = 500 ... 690 V:

- U_{min} = p0210 * 0.82 (AC/AC) > 420 V, p0210 * 0.63 (DC/AC) > 480 V

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

70 [Vrms]

1000 [Vrms]

400 [Vrms]

Description:

Sets the drive unit supply voltage (3-ph. AC).

The value corresponds to the rms value of the phase-to-phase rated line supply voltage.

Dependency:

The parameter can be reduced to p0210 = 70 V if p0212.0 is set.

Notice:

When connected to 3-ph. 230 V AC (only booksize units) the following must be observed:

- the undervoltage and overvoltage limits change (r0296, r0297).

- when using the internal braking chopper of Basic Line Modules (20 or 40 kW) the threshold when the braking chopper becomes active is reduced to 385 V. When using an external braking chopper, it must be ensured that a suitable activation threshold is used.

- all of the components connected to this DC link must also be adapted to the low line supply voltage. It is especially important that the rated DC voltage of all of the drives connected to this DC link is set with p0210 (e.g. p0210(SERVO) = 1.35 x p0210(B_INF) = 310 V).

- it is not possible to use a Control Supply Module (CSM) to generate a 24 V supply from the DC link, as the minimum continuous DC link voltage should not be below 430 V.

Note:

The supply voltage range depends on the voltage class of the power unit.

400 V chassis units: 380 V ≤ p0210 ≤ 480 V

690 V chassis units: 500 V ≤ p0210 ≤ 690 V

400 V booksize units can also be connected to 3-ph. 230 V AC:

400 V booksize units: 180 V ≤ p0210 ≤ 480 V

A reduced supply voltage up to 70 V is possible if p0212.0 = 1 has been set.

p0211		Rated line frequency / Rated line freq	
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [Hz]	100 [Hz]	60 [Hz]
Description:	Sets the rated line frequency.		
Note:	The frequency corresponds to the stator frequency of the exciter when supplied from a three-phase AC power controller for a separately excited synchronous machine with reverse field excitation.		

p0212		Power unit configuration / PU config			
VECTOR_G	Can be changed: C2(2)	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Converter	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 bin		
Description:	Sets the power unit configuration.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Drive unit line supply voltage reduced	Yes	No	-
	01	External precharging present	Yes	No	-
	03	Automatically adapt Vdc_max limit	No	Yes	-
	05	Contactors display inputs/outputs status	Yes	No	9814

Dependency:	For bit 00: Reduced supply voltages are only possible for booksize and chassis power units (DC/AC). Bit 0 = 1 can only be set if r0192.22 = 1. For bit 01 = 1: The external precharging setting only affects the DC/AC power units. For bit 03 = 1: The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set. Refer to: r0192, p0210
Caution:	For bit 00: Working with reduced input voltages deactivates undervoltage detection. For bit 03: If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).
Note:	For bit 00 = 0: It is not possible to reduce the supply voltage in p0210. For bit 00 = 1: With this setting the supply voltage in p0210 can be reduced to 100 V. Booksize PU: only for operating mode p1300 = 19 Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control For bit 01 = 0: There is no external precharging of the DC/AC Motor Modules. The precharging monitoring is bypassed. For bit 01 = 1: There is external precharging of the DC/AC Motor Modules. The precharging monitoring is calculated. For bit 03 = 0: The DC link voltage limit is calculated from p0210. For bit 03 = 1: The DC link voltage limit is set to the maximum value of the power unit.

For bit 05 = 1:

The status of the inputs/outputs for the power unit contactors is displayed in r0256.

This only applies to chassis power units with 3 AC line connection and line contactors.

The status display is only effective after parameter save and POWER ON.

p0212

Power unit configuration / PU config

VECTOR_G (n/M)

Can be changed: C2(2)

Calculated: -

Access level: 3

Data type: Unsigned16

Dyn. index: -

Func. diagram: -

P-Group: Converter

Unit group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

-

-

0000 0000 bin

Description:

Sets the power unit configuration.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Drive unit line supply voltage reduced	Yes	No	-
01	External precharging present	Yes	No	-
03	Automatically adapt Vdc_max limit	No	Yes	-
05	Contactor display inputs/outputs status	Yes	No	9814
06	Reduction of the permissible minimum voltage during precharging	Yes	No	-

Dependency:

For bit 00:

Reduced supply voltages are only possible for booksize and chassis power units (DC/AC).

Bit 0 = 1 can only be set if r0192.22 = 1.

For bit 01 = 1:

The external precharging setting only affects the DC/AC power units.

For bit 03 = 1:

The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set.

Refer to: r0192, p0210

Caution:

For bit 00:

Working with reduced input voltages deactivates undervoltage detection.

For bit 03:

If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note:

For bit 00 = 0:

It is not possible to reduce the supply voltage in p0210.

For bit 00 = 1:

With this setting the supply voltage in p0210 can be reduced to 100 V.

Booksize PU: only for operating mode p1300 = 19

Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control

For bit 01 = 0:

There is no external precharging of the DC/AC Motor Modules. The precharging monitoring is bypassed.

For bit 01 = 1:

There is external precharging of the DC/AC Motor Modules. The precharging monitoring is calculated.

For bit 03 = 0:

The DC link voltage limit is calculated from p0210.

For bit 03 = 1:

The DC link voltage limit is set to the maximum value of the power unit.

For bit 05 = 1:

The status of the inputs/outputs for the power unit contactors is displayed in r0256.

This only applies to chassis power units with 3 AC line connection and line contactors.

The status display is only effective after parameter save and POWER ON.

For bit 06:

Precharging via the Motor Module is activated using this bit. To do this, while precharging, the undervoltage threshold for the pulse enable is reduced.

Precharging via the Motor Module can only be activated for S120 devices for separately excited synchronous generators where the DC link voltage control has been preselected (technology controller function module).

p0212 Power unit configuration / PU config

B_INF	Can be changed: C2(2)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 bin

Description: Sets the power unit configuration.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Drive unit line supply voltage reduced	Yes	No	-
	02	Reserved	Yes	No	-
	05	Contactor display inputs/outputs status	Yes	No	9814

Dependency: For bit 00:
Reduced supply voltages are only possible on booksize power units.
Bit 0 = 1 can only be set if r0192.22 = 1.
Refer to: r0192, p0210

Caution:

For bit 00:
Working with reduced input voltages correspondingly reduces undervoltage detection.
This function may only be used by personnel with expert knowledge!

Note:

For bit 00 = 0:
It is not possible to reduce the supply voltage in p0210 to below 180 V.
For bit 00 = 1:
With this setting the supply voltage in p0210 can be reduced to 70 V.
Bit 0 = 1 can only be set for booksize power units with a rated power of up to 40 kW.
The activation of this function is retentively saved in the unit and for incorrect design of the application can result in loss of warranty!
For bit 02:
Reserved. It is not permissible to set to 1.
For bit 05 = 1:
The status of the inputs/outputs for the power unit contactors is displayed in r0256.
This only applies to chassis power units with 3 AC line connection and line contactors.
The status display is only effective after parameter save and POWER ON.

p0230 Drive filter type motor side / Drv filt type mot

VECTOR_G	Can be changed: C2(1, 2)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	0

Description: Sets the type of the filter at the motor side.

Value:

0:	No filter
1:	Motor reactor
2:	dv/dt filter
3:	Sine-wave filter Siemens
4:	Sine-wave filter third-party

Dependency: The following parameters are influenced using p0230:
p0230 = 1:
--> p0233 (power unit, motor reactor) = filter inductance

2 Parameters

2.2 List of parameters

p0230 = 3:

- > p0233 (power unit, motor reactor) = filter inductance
- > p0234 (power unit sine-wave filter capacitance) = filter capacitance
- > p0290 (power unit overload response) = inhibit pulse frequency reduction
- > p1082 (maximum speed) = Fmax filter / pole pair number
- > p1800 (pulse frequency) >= nominal pulse frequency of the filter
- > p1802 (modulator modes) = space vector modulation without overcontrol
- > p1811 (modulator configuration) = wobulation amplitude
- > p1909 (motor data identification, control word) = only Rs measurement

p0230 = 4:

- > p0290 (power unit overload response) = inhibit pulse frequency reduction
- > p1802 (modulator modes) = space vector modulation without overcontrol
- > p1811 (modulator configuration) = wobulation amplitude
- > p1909 (motor data identification, control word) = only Rs measurement

The user must set the following parameters according to the data sheet of the sine-wave filter and also the user must check whether they are permitted.

- > p0233 (power unit, motor reactor) = filter inductance
- > p0234 (power unit sine-wave filter capacitance) = filter capacitance
- > p1082 (maximum speed) = Fmax filter / pole pair number
- > p1800 (pulse frequency) >= nominal pulse frequency of the filter

Refer to: p0233, p0234, p0290, p1082, p1800, p1802

Note:

Only motor reactor filter type can be selected for a synchronous reluctance motor (RESM).
if a filter type cannot be selected, then this filter type is not permitted for the Motor Module.

p0230 = 1:

The output frequency of booksize power units with output reactors is restricted to 120 Hz, for blocksize and chassis power units, to 150 Hz. The maximum pulse frequency for booksize and blocksize power units is 4 kHz, for chassis power units, twice the rated pulse frequency (2.5 kHz or 4 kHz).

p0230 = 2:

Chassis power units with dv/dt filter, depending on the rated pulse frequency, may be operated with a maximum pulse frequency of p1800 = 2.5 kHz or 4 kHz. The output frequency is limited to 150 Hz.

p0230 = 3:

Sine-wave filters with a rated pulse frequency of 1.25 or 2.5 kHz should only be operated with a current controller sampling time p0115[0] = 400 µs, sine-wave filters with a rated pulse frequency of 2 or 4 kHz with p0115[0] = 250 µs. The sine-wave filter cannot be selected if the current controller sampling time has not been appropriately set. Chassis power units with sine-wave filter are limited to output frequencies of 115 Hz or 150 Hz.

Bit field:	Bit	Signal name	1 signal	0 signal
	05	Use voltage measured values for flying restart	Yes	No
				FP
				-

2 Parameters

2.2 List of parameters

Warning:

For p0247.5 = 1 (only for induction motors):

If the Voltage Sensing Module (VSM) is connected to the line voltage, then the line frequency is interpreted as speed. In this case, the flying restart function cannot be used together with VSM and the bit should be set to 0.

If only one VSM is connected at the Motor Module, line synchronization must be deactivated (p3800 = 0), in order to be able to use flying restart together with VSM. If two VSMs are connected, the second VSM is used for flying restart.

Note:

The functions are only available if the Motor Module is assigned a Voltage Sensing Module (VSM) (p0150, p0151).

VECTOR_G

Can be changed: C2(1, 2)**Calculated:** -**Access level:** 4**Data type:** Integer16**Dyn. index:** -**Func. diagram:** -**P-Group:** Converter**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0

1

0

Description:

Sets the cooling type for booksize compact power units.

This therefore defines whether for these power units, the internal air cooling is shut down and instead, the "Cold-Plate" cooling type is used.

Value:

0: Air cooling int

1: Cold-Plate

Note:

For booksize compact power units, there is a 4 at the 5th position of the Article number.

The parameter is irrelevant for all other power unit types.

p0251[0...n]**Power unit heat sink fan operating hours counter / PU fan t_oper**

VECTOR_G, B_INF

Can be changed: T**Calculated:** -**Access level:** 3**Data type:** Unsigned32**Dyn. index:** PDS, p0120**Func. diagram:** -**P-Group:** Modulation**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0 [h]

4294967295 [h]

0 [h]

Description:

Displays the operating hours of the heat sink fan in the power unit.

The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).

Dependency:

Refer to: p0252, r0277

Refer to: A30042

Note:

For r0193.13 = 0, the following applies:

For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.

p0252**Power unit heat sink fan operating time maximum / PU fan t_oper max**

VECTOR_G, B_INF

Can be changed: T**Calculated:** -**Access level:** 4**Data type:** Unsigned32**Dyn. index:** -**Func. diagram:** -**P-Group:** Modulation**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0 [h]

500000 [h]

40000 [h]

Description:

Sets the maximum operating time of the heat sink fan in the power unit.

The monitoring is deactivated with p0252 = 0.

Dependency:

Refer to: p0251, r0277

Refer to: A30042

Notice:

For firmware version < 5.1 of the power unit, the value is limited to 65535 hours.

For multi-axis power units, the same value must be entered for all axes.

Note:

For power units with a model for the fan service life, the shortest conceivable service life is permanently saved. If p0252 is set to a value not equal to 0, then this saved value is always indicated in p0252.

p0254[0...n]	Operating hours counter power unit fan inside the converter / PU inner fan t_op		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [h]	4294967295 [h]	0 [h]
Description:	Displays the power unit fan operating hours of the internal fan in the power unit. The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).		
Dependency:	Refer to: A30042		
Note:	For r0193.13 = 0, the following applies: For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.		
p0255[0...7]	Power unit contactor monitoring time / PU cont t_monit		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1 [ms]	65535 [ms]	[0] 0 [ms] [1] 0 [ms] [2] -1 [ms] [3] -1 [ms] [4...7] 0 [ms]
Description:	Sets the monitoring time for internal monitoring of the contactor feedback contacts. For a value 0.0 or negative values, the particular monitoring is deactivated. For index [0...3]: Is used to monitor the delay time between the control and feedback signals of the particular contactor. For index [2, 3]: The value -1.0 means that the particular opening time is taken from Index 0 or 1. For index [4...7]: Is used for simultaneity monitoring for a parallel connection. After a contactor has been opened or closed, this checks whether, after the monitoring time has expired, all contactors of the parallel connection have assumed the same state.		
Index:	[0] = Precharging contactor closing time [1] = Bypass contactor closing time [2] = Precharging contactor opening time [3] = Bypass contactor opening time [4] = Simultaneity precharging contactor closing time [5] = Simultaneity bypass contactor closing time [6] = Simultaneity precharging contactor opening time [7] = Simultaneity bypass contactor opening time		
Dependency:	Refer to: r0256 Refer to: F05118, F05119, F30060, F30061		
Notice:	For index [4...7]: The simultaneity monitoring is only activate after parameter save and POWER ON.		
Note:	- this parameter is only effective for chassis power units with 3 AC line connection and line contactors. - the simultaneity monitoring can only be activated for a parallel connection. - the feedback signal input of an open bypass contactor must be displayed in r0256 = 0. - the feedback signal input of an open precharging contactor must be displayed in r0256 = 1. - Determining practical monitoring times can be supported by a tracing r0256. For power unit firmware version less than 4.6, the following applies: There are no separate monitoring times for the delay time between opening and closing. In this case, the maximum of the opening time and closing time is effective.		

2 Parameters

2.2 List of parameters

For index [0...3]:

For Active Line Modules in the Chassis-2 format, the delay time monitoring is active and preset as follows:

- p0255[0, 2] = 250 ms

- p0255[1, 3] = 3000 ms.

	0.0 [s]	60.0 [s]	5.0 [s]

Description: Sets starting time 1 to monitor the cooling unit after switch-on command.
After switching on, the following signals must be present within starting time 1:
- "RKA switched on"
- "RKA liquid flow OK"
When a fault occurs, an appropriate message is output.

Dependency: Refer to: F49152, F49153

Note: RKA: cooling system

p0261 Cooling unit starting time 2 / RKA start time 2

VECTOR_G (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9794, 9795
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	1200.0 [s]	180.0 [s]

Description: Sets starting time 2 to monitor the cooling unit after switch-on command.
After switching on, the following signals must be present within starting time 2:
- "RKA conductivity, no fault"
- "RKA conductivity, no alarm"
When a fault occurs, an appropriate message is output.

Dependency: Refer to: p0266

Refer to: F49151

p0262 Cooling unit fault conductivity delay time / RKA cond t_del

VECTOR_G (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9794, 9795
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	30.0 [s]	0.0 [s]

Description: Sets the delay time for the fault "RKA: Conductive limit value exceeded" during operation.
The fault is only output if the conductivity during operation exceeds the permissible fault value, and the value remains at this level for longer than is set in this parameter.

Dependency: Refer to: F49151, A49171

2 Parameters

2.2 List of parameters

p0263	Cooling unit fault liquid flow delay time / RKA flow t_del		
VECTOR_G (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 20.0 [s]	Access level: 3 Func. diagram: 9794, 9795 Unit selection: - Expert list: 1 Factory setting 3.0 [s]
Description:	Sets the delay time for the fault "RKA: Liquid flow too low". The fault is only output if the cause is present for a time longer than is set in this parameter.		
Dependency:	Refer to: F49153		

p0264	Cooling unit run-on time / RKA run-on time		
VECTOR_G (Cool_unit), B_INF (Cool_unit)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 180.0 [s]	Access level: 3 Func. diagram: 9794, 9795 Unit selection: - Expert list: 1 Factory setting 30.0 [s]
Description:	Sets the run-up time of the cooling unit after a switch-off command.		

r0265.0...3	BO: Cooling unit control word / RKA STW		
VECTOR_G (Cool_unit), B_INF (Cool_unit)	Can be changed: - Data type: Unsigned8 P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description:	Displays the control word for the cooling unit.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Switch on cooling unit	Switch on	Switch off	-
	01	Message converter off	OFF	ON	-

	05	RKA liquid flow OK	Yes	No	-
	06	RKA conductivity no fault	Yes	No	9974
	07	RKA conductivity no alarm	Yes	No	9974
Dependency:	Refer to: p0266				

r0277[0...n]		Power unit heat sink fan wear counter / PU fan wear_count		
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: PDS, p0120	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	- [%]	- [%]	- [%]	
Description:	Displays the wear counter of the heat sink fan in the power unit. After a fan has been replaced, the wear can be reset by setting parameter p0251 to 0. The wear counter is deactivated with p0252 = 0.			
Dependency:	Refer to: p0251, p0252 Refer to: A30042			
Note:	- for r0193.13 = 1, the wear counter is based on a model for the service life. For r0193.13 = 0, the value is determined as quotient from p0251 and p0252. - for r0193.13 = 0, a 0 is displayed in the wear counter if the operating hours counter/wear counter was deactivated using p0252 = 0.			

p0278		DC link voltage undervoltage threshold reduction / Vdc U_under red		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Converter	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-80 [V]	0 [V]	0 [V]	
Description:	Sets the absolute value by which the threshold to initiate the undervoltage fault (F30003) is reduced.			
Dependency:	Refer to: p0210, r0296 Refer to: F30003			
Notice:	When using a Control Supply Module (CSM) for 24 V supply from the DC link, the minimum continuous DC link voltage may not lie below 430 V. DC link voltages in the range 300 ... 430 V are permissible up to a duration of 1 min.			
Note:	The resulting shutdown threshold can be read in r0296 and is dependent on the selected rated voltage (p0210) and the power unit being used.			

p0279	DC link voltage offset alarm threshold / Vdc offs A thresh		
B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8760, 8864, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [V]	500 [V]	0 [V]
Description:	Sets the voltage threshold to initiate alarm A06810. The value represents an offset so that the alarm threshold is obtained from the total of r0296 and p0279.		
Dependency:	Refer to: p0210, r0296 Refer to: A06810		
Note:	The absolute value of the undervoltage threshold r0296 depends on the selected unit supply voltage (p0210).		
p0287[0...1]	Ground fault monitoring shutdown threshold / Gnd fit threshold		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	[0] 6.0 [%] [1] 16.0 [%]
Description:	Sets the shutdown thresholds for the ground fault monitoring. The setting is made as a percentage of the maximum current of the power unit (r0209).		
Index:	[0] = During precharging [1] = Regular		
Dependency:	Refer to: F30021		
Note:	The parameter only applies to booksize and chassis power units. Sets the thresholds: - the prerequisite is at least firmware version 2.2 of the power unit. Deactivate ground fault monitoring: - Sequence: --> p0287[1] = 0 --> p0287[0] = 0 - irrespective of the firmware version of the power unit.		
r0289	CO: Maximum power unit output current / PU I_outp max		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Display and connector output for the maximum actual output current of the power unit. Derating factors must be taken into account for this value.		

p0290	Power unit overload response / PU overld response		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8021
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	13	0
Description:	<p>Sets the response to a thermal overload condition of the power unit. The following quantities can result in a response to thermal overload:</p> <ul style="list-style-type: none"> - heat sink temperature (r0037[0]). - chip temperature (r0037[1]). - power unit overload I2t (r0036). <p>Possible measures to avoid thermal overload:</p> <ul style="list-style-type: none"> - reduce the output current limit r0289 and r0067 (for closed-loop speed/velocity or torque/force control) or the output frequency (for U/f control indirectly via the output current limit and the intervention of the current limiting controller). - reduce the pulse frequency. <p>A reduction, if parameterized, is always realized after an appropriate alarm is output.</p> <p>For p0290 = 0: When a temperature alarm threshold is exceeded, the output current is reduced, and in turn, the output frequency. If the current reduction is not sufficient to thermally relieve the power unit, when the drive reaches the temperature fault threshold it switches off. This setting is not suitable for drives requiring a constant torque. Application: pumps, fans</p> <p>For p0290 = 1: The power unit operates at the required operating point. When the fault threshold is reached, the drive switches off and an appropriate fault is output. Application: Drive applications where, as a result of the underlying process, no setpoint deviations of individual drives in the group are permitted - or where the pulse frequency must be strictly maintained.</p> <p>For p0290 = 2: The pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. If the pulse frequency reduction is not sufficient to thermally relieve the power unit, then the output current is also reduced. Application: Drives with a low dynamic performance and occasional overload where speed deviations are permissible.</p> <p>For p0290 = 3: Only the pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. Application: Drives with a low dynamic performance and occasional overload where a speed deviation is not permissible.</p> <p>For p0290 = 10: For Booksize devices, in addition to the heat sink and chip temperatures, the difference between the two temperatures is monitored as an additional variable. When a temperature threshold is exceeded, the output current is reduced - and in turn, the output frequency. This overload response is activated as default setting for Booksize devices with a pulse frequency higher than or equal to 16 kHz.</p> <p>For p0290 = 12: In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum. The output current is only reduced if the actual chip temperature increases above a certain temperature threshold. Application: Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile (e.g. centrifuges, flywheel presses, cranes).</p> <p>For p0290 = 13: In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum.</p>		

2 Parameters

2.2 List of parameters

Application:

Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile, and where the output current is not to be reduced (e.g. centrifuges, flywheel presses, cranes).

Value:

- 0: Reduce output current
- 1: No reduction shutdown when overload threshold is reached
- 2: Reduce the pulse frequency and output current
- 3: Reduce the pulse frequency
- 10: Automatic output current reduction
- 12: Automatic pulse frequency and output current reduction
- 13: Automatic pulse frequency reduction

Dependency:

If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only responses can be selected without reducing the pulse frequency (p0290 = 0, 1, 10).

For a thermal power unit overload, an appropriate alarm or fault is output, and r2135.15 or r2135.13 set.

For p0290 = 10:

This response is only applicable for booksize power units.

Refer to: r0036, r0037, p0108, r0108, p0230, r2135

Refer to: A05000, A05001, A07805

Notice:

If the thermal overload of the power unit is not sufficiently reduced by the actions taken, the drive is always shut down. This means that the power unit is always protected irrespective of the setting of this parameter.

Note:

Under overload conditions, the current and torque limit are reduced, and therefore the motor is braked and forbidden speed ranges (e.g. minimum speed p1080 and suppression [skip] speeds p1091 ... p1094) can be passed through. When the motor data identification routine is selected, parameter p0290 cannot be changed.

For p0290 = 0, 2, 12:

This is setting is only practical if the load decreases with decreasing speed (e.g. for applications with variable torque such as for pumps and fans).

For p0290 = 2, 3, 12, 13:

The I2t overload detection of the power unit does not influence the response "Reduce pulse frequency".

For p0290 = 10, 12, 13:

The possible load duty cycles, calculated based on the previous model (p0290 = 0, 1, 2, 3) for booksize power units cannot be transferred in every case. This is the reason that we recommend that you contact our application support department if you are uncertain about dimensioning the device.

r0293

CO: Power unit alarm threshold model temperature / PU A_thr mod_temp

VECTOR_G

Can be changed: -

Calculated: -

Access level: 3

Data type: FloatingPoint32

Dyn. index: -

Func. diagram: 8021

Unit group: 21_1

Unit selection: p0505

Not for motor type: -

Scaling: p2006

Expert list: 1

Min

Max

Factory setting

- [°C]

- [°C]

- [°C]

Description:

Temperature alarm threshold for the difference from the chip and heat sink temperature in the thermal model.

Dependency:

Refer to: r0037

Refer to: F30024

Note:

The parameter is only relevant for chassis power units.

p0294

Power unit alarm with I2t overload / PU I2t alm thresh

VECTOR_G

Can be changed: U, T

Calculated: -

Access level: 3

Data type: FloatingPoint32

Dyn. index: -

Func. diagram: 8021

P-Group: Converter

Unit group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

10.0 [%]

100.0 [%]

95.0 [%]

Description:

Sets the alarm threshold for the I2t power unit overload.

Drive:

If this threshold is exceeded, an overload alarm is generated and the system responds as parameterized in p0290.

Infeed:

When the threshold value is exceeded, only an overload alarm is output.

Dependency: Refer to: r0036, p0290
Refer to: A07805

Note: The I2t fault threshold is 100 %. If this value is exceeded, fault F30005 is output.

p0294 Power unit alarm with I2t overload / PU I2t alm thresh

B_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8021
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.

Dependency: Refer to: r0036
Refer to: A07805

Note: The parameter is only relevant for booksize units!

p0295 Fan run-on time / Fan run-on time

VECTOR_G, B_INF	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [s]	600 [s]	0 [s]

Description: Sets the fan run-on time after the pulses for the power unit have been canceled.

Note: - Under certain circumstances, the fan can continue to run for longer than was set (e.g. as a result of the excessively high heat sink temperature).
- For values less than 1 s, a 1 s run on time for the fan is active.

r0296 DC link voltage undervoltage threshold / Vdc U_lower_thresh

VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.

If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.

Dependency: Refer to: p0278
Refer to: F30003

Note: The value depends on the device type and the selected device rated voltage (p0210).
For booksize drive units, the following applies:
The undervoltage threshold can be reduced with p0278.

r0296 DC link voltage undervoltage threshold / Vdc U_lower_thresh

B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8750, 8760, 8850, 8864, 8950, 8964
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.

If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.

2 Parameters

2.2 List of parameters

Dependency: Refer to: F30003
Note: The value depends on the device type and the selected device rated voltage (p0210).

Value:	0: No motor
	1: Induction motor
	2: Synchronous motor
	6: Synchronous reluctance motor
	7: SIEMOSYN synchronous motor
	8: Reluctance motor textile
	10: 1LE1 induction motor (not a code number)
	11: 1LA1 induction motor (not a code number)
	12: 1LE2 induction motor (not a code number)
	13: 1LG6 induction motor (not a code number)
	14: 1xx1 SIMOTICS FD induction motor (not a code number)
	15: 1LA5 induction motor (not a code number)
	16: 1LA6 induction motor (not a code number)
	17: 1LA7 induction motor (not a code number)
	18: 1xx8 SIMOTICS TN induction motor (not a code number)
	19: 1LA9 induction motor (not a code number)

100: 1LE1 induction motor
 101: 1PC1 induction motor
 102: 1PH2 induction motor
 104: 1PH4 induction motor
 105: 1LE5 induction motor
 106: 1LE6 induction motor
 107: 1PH7 induction motor
 108: 1PH8 induction motor
 111: xxxx induction motor OEM
 134: 1PM4 induction motor
 136: 1PM6 induction motor
 166: 1PL6 induction motor
 222: xxxx synchronous motor OEM
 264: 1FW4 synchronous motor
 283: 1FW3 synchronous motor
 600: 1FP1 standard reluctance motor
 603: 1FP3 synchronous reluctance motor OEM
 10000: Motor with DRIVE-CLiQ
 10001: Motor with DRIVE-CLiQ 2nd data set

Dependency:

Motors, selection 206, 236, 237 cannot be operated (also not as motor with DRIVE-CLiQ).

p0300 = 5 cannot be selected with SINAMICS G.

When the motor type is changed, the code number in p0301 may be reset to 0.

p0300 = 12 can only be selected for p0100 = 1 (NEMA).

When selecting p0300 = 10 ... 19, parameters p0335, p0626, p0627, and p0628 of the thermal motor model are pre-assigned as a function of p0307 and p0311.

When selecting a 1FW4 motor – if the motor database permits this – when exiting commissioning, then p1750.5 is automatically set. This is the reason that after exiting commissioning, all parameters must be saved and a warm restart must be initiated (e.g. p0009 = 30, p0976 = 3).

Refer to: p0301

Caution:

A permanent-magnet synchronous motor cannot be operated with an SSI encoder without HTL/TTL track.

A separately excited synchronous motor can only be operated with an SSI encoder if this is used as the second encoder and an HTL/TTL encoder is used as the first encoder.

Notice:

If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx). Write protection is automatically canceled when the results of motor data identification are copied to the motor parameters.

The motor type of a catalog motor corresponds to the upper three digits of the code number or the following assignment (if the particular motor type is listed):

Type/code number ranges

100 / 100xx, 110xx, 120xx, 130xx, 140xx, 150xx, 160xx, 170xx, 180xx, 190xx

101 / 101xx

102 / 102xx, 122xx

104 / 104xx, 114xx, 124xx

105 / 105xx

107 / 107xx, 117xx, 127xx

108 / 108xx, 118xx, 128xx, 138xx, 148xx, 158xx

134 / 134xx, 144xx, 154xx

136 / 136xx, 146xx, 156xx

166 / 166xx, 176xx, 186xx

271 / 271xx, 281xx

264 / 264xx, 274xx, 284xx, 294xx

283 / 283xx, 293xx

For OEM motors:

111 / 111xx, 112xx, 113xx

222 / 222xx, 223xx, 224xx

For 1PQ8 motors (p0300 = 18) the fan type p0335 should be set to 5.

Note:

With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

2 Parameters

2.2 List of parameters

A motor type with a value above p0300 ≥ 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of a third-party motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for a third-party motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

p0301[0...n]	Motor code number selection / Mot code No. sel		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: SESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	The parameter is used to select a motor from a motor parameter list. When changing the code number (with the exception to the value 0), all of the motor parameters are pre-assigned from the internally available parameter lists.		
Dependency:	Code numbers can only be selected for motor types that correspond to the motor type selected in p0300. For 1PH2, 1PH4, 1PH7, 1PM4, 1PM6, 1FT6 motors, code numbers are also possible, whose fourth decimal position is greater by a value of 1 or 2 than the matching motor type in p0300. For 1FE1 motors, the third decimal position can be higher by a value of 1. Refer to: p0300		
Note:	The motor code number can only be changed if the matching catalog motor was first selected in p0300. For a motor with DRIVE-CLiQ, p0301 cannot be changed. In this case, p0301 is automatically written to the code number of the motor parameter read in (r0302) if p0300 is set to 10000. When selecting a catalog motor (p0300 ≥ 100), drive commissioning can only be exited if a code number is selected.		

r0302[0...n]	Motor code number of motor with DRIVE-CLiQ / Mot code mot w/ DQ		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the motor code number from the saved motor data from a motor with DRIVE-CLiQ.		
Note:	Drive commissioning can only be exited if the code number that was downloaded (r0302) matches the stored code number (p0301). If the numbers differ, then the motor data set should be re-loaded using p0300 = 10000. The motor data are always expected from the first encoder that is assigned to the drive data sets (refer to p0187 = encoder 1) data set number. The value is not updated cyclically but only on specific events (e.g. update DRIVE-CLiQ device). r0302 = 0: No motor with DRIVE-CLiQ found		

r0303[0...n]		Motor with DRIVE-CLiQ status word / Motor w DQ ZSW																											
VECTOR_G	Can be changed: - Data type: Unsigned16 P-Group: Motor Not for motor type: - Min -	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -																										
Description:	Displays the status word of the automatic motor parameter sensing of a motor with DRIVE-CLiQ. Motor parameter sensing takes place in the following events if the SMI is connected to the Motor Module and the encoder is activated (p0145): - Warm restart - downloading projects. - POWER ON (switch-off/switch-on). - where p0300 = 10000, 10001.

Note:	SMI: SINAMICS Sensor Module Integrated																												
p0304[0...n]		Rated motor voltage / Mot U_{rated}																											
VECTOR_G	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0 [Vrms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 20000 [Vrms]	Access level: 1 Func. diagram: 6301, 6724 Unit selection: - Expert list: 1 Factory setting 0 [Vrms]																										
Description:	Sets the rated motor voltage (rating plate).																												
Dependency:	Refer to: p0349																												
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.																												
Note:	When the parameter value is entered the connection type of the motor (star-delta) must be taken into account. When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).																												
p0305[0...n]		Rated motor current / Mot I_{rated}																											
VECTOR_G	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.00 [Arms]	Access level: 1 Func. diagram: 6301 Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]																										
Description:	Sets the rated motor current (rating plate).																												
Dependency:	Refer to: p0349																												
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3). If the rated motor current exceeds twice the maximum drive converter current (r0209), then the maximum current is reduced due to the current harmonics that increase overproportionally (r0067).																												

2 Parameters

2.2 List of parameters

Note: When the parameter value is entered the connection type of the motor (star-delta) must be taken into account. When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0306[0...n]	Number of motors connected in parallel / Mot parallel qty		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: Unsigned8	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	50	1

Description: Number of motors that can be operated in parallel using one motor data set. Depending on the motor number entered, internally an equivalent motor is calculated. The following should be carefully observed for motors connected in series: The following rating plate data should only be entered for one motor:
 - resistances and inductances: p0350 ... p0361
 - currents: p0305, p0320, p0323, p0325, p0329, p0389, p0390, p0391, p0392
 - power ratings: p0307
 - masses/moments of inertia: p0341, p0344

Recommendation: All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0333).

Dependency: For motors connected in parallel, external thermal protection should be provided for each individual motor.

Caution: Refer to: r0331

The motors to be connected up in parallel must be of the same type and the same size (power rating) (identical Article No. [MLFB]).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.

The number of motors set must correspond to the number of motors that are actually connected in parallel.

After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

For synchronous motors connected in parallel with p1300 >= 20, be following applies:

- the individual motors must be mechanically coupled with one another and the EMF must be aligned to one another.

For induction motors that are connected in parallel, but which are not mechanically coupled with one another, then the following applies:

- an individual motor must not be loaded beyond its stall point.

Notice: If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: Only operation with U/f characteristic makes sense if more than 10 identical motors are connected in parallel. Separately excited synchronous motors must not be connected in parallel.

Synchronous and reluctance motors that are not coupled with one another align themselves when the pulses are switched in. If the motors have different load levels, then equalization currents flow between the motors.

p0307[0...n]	Rated motor power / Mot P_rated		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 14_6	Unit selection: p0100
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100000.00 [kW]	100000.00 [kW]	0.00 [kW]

Description: Sets the rated motor power (rating plate).

Dependency: IECdrives (p0100 = 0): Units kW

NEMA drives (p0100 = 1): Units hp

Refer to: p0100

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For generators, a negative rated power should be entered.
When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0308[0...n]	Rated motor power factor / Mot cos phi rated		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-0.990	1.000	0.000
Description:	Sets the rated motor power factor (cos phi, rating plate). For a parameter value of 0.000, the power factor is internally calculated and displayed in r0332.		
Dependency:	This parameter is only available for IEC motors (p0100 = 0). Refer to: p0100, p0309, r0332		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. For separately excited synchronous motors (p0300 = 5) negative values for the power factor are interpreted as overexcitation. For all other motor types, the sign is ignored.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx). When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).		

p0309[0...n]	Rated motor efficiency / Mot eta_rated		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	99.9 [%]	0.0 [%]
Description:	Sets the rated motor efficiency (rating plate). For a parameter value of 0.0, the power factor is internally calculated and displayed in r0332.		
Dependency:	This parameter is only visible for NEMA motors (p0100 = 1, 2). Refer to: p0100, p0308, r0332		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

p0310[0...n]	Rated motor frequency / Mot f_rated		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6301
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Hz]	3000.000 [Hz]	0.000 [Hz]
Description:	Sets the rated motor frequency (rating plate).		
Dependency:	The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0. The rated frequency is restricted to values between 1.00 Hz and 650.00 Hz. Refer to: p0311, r0313, p0314		

2 Parameters

2.2 List of parameters

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
If p0310 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0311[0...n]	Rated motor speed / Mot n_rated		
VECTOR_G	Can be changed: C2(1, 3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.00 [rpm]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 210000.00 [rpm]	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the rated motor speed (rating plate). For VECTOR the following applies (p0107): For p0311 = 0, the rated motor slip of induction motors is internally calculated and displayed in r0330. It is especially important to correctly enter the rated motor speed for vector control and slip compensation for U/f control.		
Dependency:	If p0311 is changed and for p0314 = 0, the pole pair (r0313) is re-calculated automatically. Refer to: p0310, r0313, p0314		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0311 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).		

r0313[0...n]	Motor pole pair number, actual (or calculated) / Mot PolePairNo act		
VECTOR_G	Can be changed: - Data type: Unsigned16 P-Group: Motor Not for motor type: - Min -	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 5300 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of motor pole pairs. The value is used for internal calculations. r0313 = 1: 2-pole motor r0313 = 2: 4-pole motor, etc.		
Dependency:	For p0314 > 0, the entered value is displayed in r0313. For p0314 = 0, the pole pair number (r0313) is automatically calculated from the rated power (p0307), rated frequency (p0310) and rated speed (p0311). Refer to: p0307, p0310, p0311, p0314		
Note:	For the automatic calculation, the pole pair number is set to the value of 2 if the rated speed or the rated frequency is zero.		

p0314[0...n]	Motor pole pair number / Mot pole pair No.		
VECTOR_G	Can be changed: C2(1, 3) Data type: Unsigned16 P-Group: Motor Not for motor type: - Min 0	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 255	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the motor pole pair number. p0314 = 1: 2-pole motor p0314 = 2: 4-pole motor, etc.		
Dependency:	For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.		
Notice:	If p0314 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3). For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.		
p0316[0...n]	Motor torque constant / Mot kT		
VECTOR_G	Can be changed: C2(1), U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL, RESM Min 0.000 [Nm/A]	Calculated: - Dyn. index: MDS, p0130 Unit group: 28_1 Scaling: - Max 400.000 [Nm/A]	Access level: 2 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.000 [Nm/A]
Description:	Sets the torque constant of the synchronous motor. p0316 = 0: The torque constant is calculated from the motor data. p0316 > 0: The selected value is used as torque constant.		
Dependency:	Refer to: r0334		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	This parameter is not used for induction motors (p0300 = 1xx).		
p0318[0...n]	Motor stall current / Mot I_standstill		
VECTOR_G	Can be changed: C2(3) Data type: FloatingPoint32 P-Group: Motor Not for motor type: ASM, SESM, REL Min 0.00 [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max 10000.00 [Arms]	Access level: 3 Func. diagram: 8017 Unit selection: - Expert list: 1 Factory setting 0.00 [Arms]
Description:	Sets the stall current for synchronous motors (p0300 = 2xx), as well as for synchronous reluctance motors (p0300 = 6xx).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is used for the I2t monitoring of the motor (refer to p0611). This parameter is not used for induction motors (p0300 = 1xx). For synchronous reluctance motors, the current corresponds to a winding temperature increase of 105 K at a speed of 20 % of the rated speed.		

2 Parameters

2.2 List of parameters

p0320[0...n]	Motor rated magnetizing current/short-circuit current / Mot I_mag_rated		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5722
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Arms]	5000.000 [Arms]	0.000 [Arms]
Description:	Induction motors: Sets the rated motor magnetizing current. For p0320 = 0.000 the magnetizing current is internally calculated and displayed in r0331. Synchronous motors: Sets the rated motor short-circuit current.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The magnetization current p0320 for induction motors (not for catalog motors) is reset when quick commissioning is exited with p3900 > 0. VECTOR: If, for induction motors, the magnetizing current p0320 is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance p0360 is changed so that the EMF r0337 remains constant.		

p0322[0...n]	Maximum motor speed / Mot n_max		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the maximum motor speed.		
Dependency:	Refer to: p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no significance for a value of p0322 = 0.		

p0323[0...n]	Maximum motor current / Mot I_max		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]
Description:	Sets the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).		
Note:	The parameter has no effect for induction motors. The parameter has not effect for synchronous motors if a value of 0.0 is entered. The user-selectable current limit is entered into p0640.		

p0324[0...n]	Winding maximum speed / Winding n_max		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]
Description:	Sets the maximum speed for the winding. The following applies when calculating the maximum speed (p1082): - for p0324 = 0 or p0532 = 0, p0322 is used. - for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.		
Dependency:	Refer to: p0322, p0532, p1082		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection. If p0324 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).		
p0325[0...n]	Motor pole position identification current 1st phase / Mot PolID I 1st Ph		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Arms]	10000.000 [Arms]	0.000 [Arms]
Description:	Sets the current for the 1st phase of the two-stage technique for pole position identification routine. The current of the 2nd phase is set in p0329. The two-stage technique is selected with p1980 = 4.		
Dependency:	Refer to: p0329, p1980, p1982, r1984, r1985, r1987, p1990		
Notice:	When the motor code (p0301) is changed, it is possible that p0325 is not pre-assigned. p0325 can be pre-assigned using p0340 = 3.		
Note:	The value is automatically pre-assigned for the following events: - For p0325 = 0 and automatic calculation of the closed-loop control parameters (p0340 = 1, 2, 3). - for quick commissioning (p3900 = 1, 2, 3).		
p0327[0...n]	Optimum motor load angle / Mot phi_load opt		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 5722, 6721
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°]	135.0 [°]	90.0 [°]
Description:	Sets the optimum load angle for synchronous motors with reluctance torque (e.g. 1FE motors). SERVO: The load angle is measured at 1.5 x rated motor current. VECTOR: The load angle is measured at the rated motor current.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	This parameter has no significance for induction motors. For synchronous motors without reluctance torque, a angle of 90 degrees must be set. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0328[0...n]	Motor reluctance torque constant / Mot kT_reluctance		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [mH]	1000.00 [mH]	0.00 [mH]
Description:	Sets the reluctance torque constant for synchronous motors with reluctance torque (e.g. 1FE ... motors). This parameter has no significance for induction motors.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For synchronous motors without reluctance torque, the value 0 must be set.		
p0329[0...n]	Motor pole position identification current / Mot PolID current		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the current for the pole position identification routine (p1980 = 1). For a two-stage technique (p1980 = 4), the current is set for the 2nd phase. The current for the 1st phase is set in p0325.		
Dependency:	The following applies for vector drives: If a maximum current (p0323) was not parameterized, then p0329 is limited to the rated motor current. Refer to: p0325, p1980, p1982, r1984, r1985, r1987, p1990		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
r0330[0...n]	Rated motor slip / Mot slip_rated		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the rated motor slip.		
Dependency:	The rated slip is calculated from the rated frequency, rated speed and number of pole pairs. Refer to: p0310, p0311, r0313		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

r0331[0...n]	Actual motor magnetizing current/short-circuit current / Mot I_mag_rtd act		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: SESM, REL Min - [Arms]	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max - [Arms]	Access level: 3 Func. diagram: 5722, 6722, 6724 Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Induction motor: Displays the rated magnetizing current from p0320. For p0320 = 0, the internally calculated magnetizing current is displayed. Synchronous motor: Displays the rated short-circuit current from p0320.		
Dependency:	If p0320 was not entered, then the parameter is calculated from the rating plate parameters.		
Note:	In the case of multi-motor operation r0331 is increased by the factor p0306 compared to p0320.		
r0332[0...n]	Rated motor power factor / Mot cos phi rated		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: PMSM, REL Min -	Calculated: - Dyn. index: MDS, p0130 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the rated power factor for induction motors. For IEC motors, the following applies (p0100 = 0): For p0308 = 0, the internally calculated power factor is displayed. For p0308 > 0, this value is displayed. For NEMA motors, the following applies (p0100 = 1, 2): For p0309 = 0, the internally calculated power factor is displayed. For p0309 > 0, this value is converted into the power factor and displayed.		
Dependency:	If p0308 is not entered, the parameter is calculated from the rating plate parameters.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
r0333[0...n]	Rated motor torque / Mot M_rated		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min - [Nm]	Calculated: - Dyn. index: MDS, p0130 Unit group: 7_4 Scaling: - Max - [Nm]	Access level: 3 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting - [Nm]
Description:	Displays the rated motor torque.		
Dependency:	IEC drives (p0100 = 0): unit Nm NEMA drives (p0100 = 1): unit lbf ft		
Note:	For induction and reluctance motors, r0333 is calculated from p0307 and p0311. For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. If p0316 = 0, then r0333 = p0312 is displayed. In the case of multi-motor operation r0333 is increased by the factor p0306 compared to the rated torque of an individual motor.		

r0334[0...n]	Actual motor-torque constant / Mot kT act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 28_1	Unit selection: p0100
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nm/A]	- [Nm/A]	- [Nm/A]
Description:	Displays the torque constant of the synchronous motor used.		
Dependency:	IEC drives (p0100 = 0): unit Nm / A NEMA drives (p0100 = 1): unit lbf ft / A Refer to: p0316		
Note:	This parameter is not used for induction motors (p0300 = 1xx). For synchronous motors, parameter r0334 = p0316 is displayed. For p0316 = 0, r0334 is calculated from p0305 and p0312 or p0305, p0307, and p0311.		
r0335[0...n]	Motor cooling type / Mot cool type		
VECTOR_G	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	128	0
Description:	Sets the motor cooling system used.		
Value:	0: Natural ventilation 1: Forced cooling 2: Liquid cooling 4: Natural ventilation and internal fan 5: Forced cooling and internal fan 6: Liquid cooling and internal fan 128: No fan		
Dependency:	For 1LA5 and 1LA7 motors (p0300), the parameter is pre-set as a function of p0307 and p0311.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter influences the thermal 3-mass motor model. 1LA1 and 1LA8 motors are characterized by the fact that they have an internal rotor fan. This "internal cooling" lies within the motor frame and is not visible. Air is not directly exchanged with the motor ambient air. For 1PQ8 motors, p0335 should be set to 5 as these motors are force-ventilated motors. The setting p0335 = 128 applies for 1LA7 motors, frame size 56 (these are operated without a fan).		
r0336[0...n]	Actual rated motor frequency / Mot f_{rated} act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the rated frequency of the motor. For p0310 > 0, this value is displayed.		
Dependency:	Refer to: p0311, p0314		
Note:	For p0310 = 0 or for synchronous motors, the rated motor frequency r0336 is calculated from the rated speed and the pole pair number. For p0310 > 0, this value is displayed (not for synchronous motors).		

r0337[0...n]	Rated motor EMF / Mot EMF_{rated}		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the rated EMF of the motor.		
Note:	EMF: Electromotive force		

r0339[0...n]	Rated motor voltage / Mot U_{rated}		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the rated motor voltage.		
Note:	For induction motors (p0300 = 1xx) the parameter is set to p0304. For synchronous motors, parameter r0339 = p0304 is displayed. If p0304 = 0, then r0339 is calculated from p0305 and p0316.		

p0340[0...n]	Automatic calculation motor/control parameters / Calc auto par		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	5	0
Description:	Setting to automatically calculate motor parameters and U/f open-loop and closed-loop control parameters from the rating plate data.		
Value:	0: No calculation 1: Complete calculation 2: Calculation of equivalent circuit diagram parameters 3: Calculation of closed-loop control parameters 4: Calculation of controller parameters 5: Calculation of technological limits and threshold values		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0. The following parameters are influenced using p0340: The parameters designated with (*) are not overwritten for catalog motors (p0300 > 100). SERVO: p0340 = 1: --> All of the parameters influenced for p0340 = 2, 3, 4, 5 --> p0341 (*) --> p0344, p0600, p0640, p1082, p2000, p2001, p2002, p2003, p2005, p2007 p0340 = 2: --> p0350 (*), p0354 (*), p0356 (*), p0358 (*), p0360 (*) --> p0625 (matching p0350), p0626 ... p0628 p0340 = 3: --> All of the parameters influenced for p0340 = 4, 5 --> p0325 (is only calculated for p0325 = 0) --> p0348 (*) (is only calculated for p0348 = 0)

p0340 = 4:
--> p1290, p1292, p1293, p1299, p1338, p1339, p1340, p1341, p1345, p1346, p1460, p1461, p1462, p1463, p1464, p1465, p1470, p1472, p1590, p1592, p1600, p1628, p1629, p1630, p1643, p1703, p1715, p1717, p1740, p1756, p1757, p1760, p1761, p1764, p1767, p1780, p1781, p1783, p1785, p1786, p1795, p7036, p7037, p7038
p0340 = 5:
--> p0260 ... p0264, p1037, p1038, p1520, p1521, p1530, p1531, p1574, p1750, p1802, p1803, p2140, p2141, p2142, p2148, p2150, p2155, p2161 ... p2164, p2175, p2177, p2194, p3207, p3208, p3236, p3237, p3806, p3815, p3820 ... p3829

Note:

The calculation is not performed, if the power unit is deactivated.
p0340 = 1 contains the calculations of p0340 = 2, 3, 4, 5 without overwriting the motor parameters from the Siemens motor lists (p0301 > 0).
p0340 = 2 calculates the motor parameters (p0350 ... p0360), but only if it does not involve a Siemens catalog motor (p0301 = 0).
p0340 = 3 contains the calculations of p0340 = 4, 5.
p0340 = 4 only calculates the controller parameters.
p0340 = 5 only calculates the controller limits.
When quick commissioning is exited using p3900 > 0, p0340 is automatically set to 1.
At the end of the calculations, p0340 is automatically set to 0.
If the STARTER commissioning tool writes a 3 into p0340 when "Downloading to target device", then this corresponds to a "Complete calculation of the motor/control parameters without equivalent circuit diagram data". The same calculations are carried out as for p0340 = 1, however, without the equivalent circuit diagram parameters of the motor (p0340 = 2), the motor moment of inertia (p0341) and the motor mass (p0344).
For third-party linear synchronous motors (p0300 = 4) equivalent circuit diagram data are not calculated (p0340 = 2).

p0341[0...n]	Motor moment of inertia / Mot M_inert		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130	Access level: 3 Func. diagram: 5042, 5210, 6020, 6030, 6031

2 Parameters

2.2 List of parameters

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3 mass model of the induction motor.
The parameter is not used for synchronous motors (p0300 = 2xx).

r0345[0...n]	Nominal motor starting time / Mot t_start Rated		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [s]	- [s]	- [s]

Description: Displays the rated motor starting time.
This time corresponds to the time from standstill up to reaching the motor rated speed and the acceleration with motor rated torque (r0333).

Dependency: Refer to: r0313, r0333, r0336, p0341, p0342

p0346[0...n]	Motor excitation build-up time / Mot t_excitation		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation build-up time of the motor.
This involves the delay time between enabling the pulses and enabling the ramp-function generator. The induction motor is magnetized during this time.

Caution:  If there is insufficient magnetization under load or if the acceleration rate is too high, then an induction motor can stall (refer to the note). This is especially true for sensorless vector control or U/f control.

Notice: If the parameter is set to 0 s for separately excited synchronous motors (p0300 = 5), then an excitation current setpoint is generated even if the drive is switched off. In the base speed range, this is the no-load excitation current (p0389). In the field-weakening range, the value is reduced with the inverse value of the actual speed. An excitation current setpoint is not generated during de-magnetizing (p0347) and if an encoder fault is detected.

When starting or executing a flying restart for a separately excited synchronous motor without encoder or with incremental encoder, then the voltage induced in the stator by the excitation current pulse is used to determine the rotor position.

The length of the ramp is pre-assigned from the motor data for p0346 = 0 s. If it crystallizes out that this time is too short, then it can be extended by entering a negative value in p0346, whereby otherwise, the excitation behavior corresponds with that for p0346 = 0 s.

For all other motor types, p0346 is internally limited downwards to 0 s.

Note: The parameter is calculated using p0340 = 1, 3.
For induction motors, the result depends on the rotor time constant (r0384). If this time is excessively reduced, this can result in an inadequate magnetizing of the induction motor. This is the case if the current limit is reached while building up magnetizing. For induction motors, the parameter cannot be set to 0 s (internal limit: 0.1 * r0384).
For permanent-magnet synchronous motors and vector control, the value depends on the stator time constant (r0386). Here, it defines the time to establish the current for encoderless operation immediately after the pulses have been enabled.

The current to excite the induction motor can be limited in p0644.

p0347[0...n]	Motor de-excitation time / Mot t_de-excitat		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	20.000 [s]	0.000 [s]
Description:	Sets the de-magnetizing time (for induction motors) after the inverter pulses have been canceled. The inverter pulses cannot be switched in (enabled) within this delay time.		
Note:	The parameter is calculated using $p0340 = 1, 3$. For induction motors, the result depends on the rotor time constant (r0384). if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).		
p0349	System of units motor equivalent circuit diagram data / Unit_sys mot ESB

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	2	1
Description:	Sets the actual system of units for motor equivalent circuit diagram data.		
Value:	1: System of units, physical 2: System of units, referred		
Dependency:	The parameter can only be changed in an offline project using the commissioning tool. Refer to: p0304, p0305, p0310		
Note:	The reference parameter for resistances of the rated motor impedance $Z = p0304 / (1.732 * p0305)$ is in the % units system. Inductances are converted into a resistance using the factor $2 * \text{Pi} * p0310$. If a reference parameter (p0304, p305, p0310) is zero, then it is not possible to make a changeover to "referred" values (per unit values).		
p0350[0...n]	Motor stator resistance cold / Mot R_stator cold		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]
Description:	Sets the stator resistance of the motor at ambient temperature p0625 (phase value).		
Dependency:	Refer to: p0625, r1912		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The motor identification routine determines the stator resistance from the total stator resistance minus the cable resistance (p0352).		

p0352[0...n]	Cable resistance / R_cable		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	120.00000 [ohm]	0.00000 [ohm]
Description:	Resistance of the power cable between the Motor Module and motor.		
Dependency:	Refer to: p7003		
Caution:	The cable resistance should be entered prior to motor data identification. If it is used subsequently, the difference by which p0352 was changed must be subtracted from the stator resistance p0350 or motor data identification must be repeated.		
			
Notice:	Parallel circuits with one winding system (p7003 = 0): p0352 includes the feeder cable resistance of an individual Motor Module. The total feeder cable resistance is obtained from p0352 divided by the number of activated Motor Modules (refer to r0395). Parallel circuits with multi-winding system (p7003 = 1): p0352 includes the complete feeder cable resistance and is directly added to the stator resistance (refer to r0395).		
Note:	The parameter influences the temperature adaptation of the stator resistance. The motor identification sets the cable resistance to 20% of the measured total resistance if p0352 is zero at the time that the measurement is made. If p0352 is not zero, then the value is subtracted from the measured total stator resistance to calculate stator resistance p0350. In this case, p0350 is a minimum of 10% of the measured value. Exception: For parallel circuit configurations with one winding system (p7003 = 0), the cable resistance is directly measured. It is important to note that only the component of an individual Motor Module is entered into p0352. The cable resistance is reset when quick commissioning is exited with p3900 > 0.		
p0353[0...n]	Motor series inductance / Mot L_series		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349

	Min	Max	Factory setting
	0.000 [mH]	1000000.000 [mH]	0.000 [mH]
Description:	Sets the series inductance.		
Note:	For the automatic calculation with p0340 = 1, 3 or 4, the calculation of p1715 is influenced by p0353. The series inductance is reset when quick commissioning is exited with p3900 > 0.		
p0354[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]
Description:	Sets the rotor/secondary section resistance of the motor at the ambient temperature p0625. For separately excited synchronous motors: Sets the damping resistance in the rotor direction (d-axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor data identification routine (p1910) (not for separately excited synchronous motors).		
Dependency:	Refer to: p0625		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		

p0355[0...n]	Motor damping resistance q axis / Mot R_damp q		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]
Description:	Sets the damping resistance of the separately excited synchronous motor quadrature to the rotor direction (q axis). This parameter value is automatically calculated using the motor model (p0340 = 1, 2).		
p0356[0...n]	Motor stator leakage inductance / Mot L_stator leak.		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349

	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910). Induction motor, separately excited synchronous motor: Sets the rotor leakage inductance of the motor. Synchronous motor: Sets the stator quadrature axis inductance of the motor.		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	If the stator leakage inductance (p0356) for induction motors is changed outside the commissioning phase (p0010 > 0), the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960). For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is, therefore, ideal for a low current.		
p0357[0...n]	Motor stator inductance d axis / Mot L_stator d		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the stator direct-axis inductance of the synchronous motor. This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).		
Note:	The parameter is not used for separately excited synchronous motors (p0300 = 5). For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is ideal for a low current.		
p0358[0...n]	Motor rotor leakage inductance / damping inductance d axis / Mot L_r leak / LDd		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]
Description:	Sets the rotor/secondary section leakage inductance of the motor. For separately excited synchronous motors: Sets the damping inductance in the rotor direction (d-axis). This value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).		

2 Parameters

2.2 List of parameters

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

VECTOR:

If the rotor leakage inductance (p0358) for induction motors is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).

p0359[0...n]	Motor damping inductance q axis / Mot L_damp q		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727

- Notice:** For permanent magnet synchronous motors (PMSM), the following applies:
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.
- Note:** When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0369[0...n] Motor saturation characteristic I_mag 4 / Mot sat. I_mag 4

VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6723, 6726
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	5.0 [%]	800.0 [%]	210.0 [%]

- Description:** The saturation characteristic (flux as mapping of current) is defined using 4 points.
This parameter specifies the x coordinate for the 4th value pair of the characteristic.
Induction motors (ASM) and separately excited synchronous motors (SESM):
The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.
The parameter sets the fourth magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).
Permanent magnet synchronous motors (PMSM):
The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.
The parameter sets the fourth stator quadrature axis current as a [%] referred to the rated motor current (p0305).

- Dependency:** The following applies for the magnetizing currents:
p0366 < p0367 < p0368 < p0369
The following applies for the stator quadrature axis current values (PMSM):
20 % < p0366 < p0367 < p0368 < p0369
Refer to: p0365
- Notice:** For permanent magnet synchronous motors (PMSM), the following applies:
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.
- Note:** When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0370[0...n] Motor stator resistance cold / Mot R_stator cold

VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]

- Description:** Displays the motor stator resistance at an ambient temperature (p0625).
The value does not include the cable resistance.

- Dependency:** Refer to: p0625

r0372[0...n]	Total power unit cable resistance / PU cable R tot		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the total cable resistance between Motor Module and motor, as well as the internal converter resistance.		
Dependency:	Refer to: r0238, p0352		
r0373[0...n]	Motor rated stator resistance / Mot R_stator rated		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the rated motor stator resistance at rated temperature (total of p0625 and p0627).		
Dependency:	Refer to: p0627		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
r0374[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4

	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the stator longitudinal inductance of the synchronous motor including the series inductance (p0353) and the motor reactor (p0233).		
Note:	The parameter is not used for separately excited synchronous motors (p0300 = 5).		
r0380[0...n]	Motor damping inductance d axis / Mot L_damp d		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the damping inductance of the separately excited synchronous motor in the rotor direction (d-axis).		

r0381[0...n]	Motor damping inductance q axis / Mot L_damp q		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the damping inductance of a separately excited synchronous motor quadrature to the rotor direction (q axis).		
r0382[0...n]	Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the magnetizing inductance of the motor. For separately excited synchronous motors: Displays the saturated magnetizing inductance in the rotor direction (d-axis).		
Note:	The parameter is not used for synchronous motors (p0300 = 2xx).		
r0383[0...n]	Motor magnetizing inductance q axis saturated / Mot L_magn q sat		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 15_1	Unit selection: p0349
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the saturated magnetizing inductance of a separately excited synchronous motor quadrature to the rotor direction (q axis).		
r0384[0...n]	Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6722
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the rotor time constant. For separately excited synchronous motors: Displays the damping time constant to the rotor direction (d axis).		
Note:	The parameter is not used for synchronous motors. The value is calculated from the total of the inductances on the rotor side (p0358, p0360) divided by the rotor/damping resistance (p0354). The temperature adaptation of the rotor resistance for induction motors is not taken into account.		

r0385[0...n]	Motor damping time constant q axis / Mot L_damping q		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the damping time constant of a separately excited synchronous motor quadrature to the rotor direction (q axis).		
Note:	The value is calculated from the total of the inductances on the damping side (p0359, p0361) divided by the damping resistance (p0355).		
r0386[0...n]	Motor stator leakage time constant / Mot T_stator leak		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the stator leakage time constant.		
Note:	The value is calculated from the total of all leakage inductances (p0233*, p0353, p0356, p0358) divided by the total of all motor resistances (p0350, p0352, p0354). The temperature adaptation of the resistances is not taken into account. * only applies for VECTOR (r0107).		
r0387[0...n]	Motor stator leakage time constant q axis / Mot T_Sleak / T_Sq		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the stator leakage time constant quadrature to the rotor direction (q axis).		
Note:	The value is calculated from the total of all leakage inductances (p0233, p0356, p0359) divided by the total of all motor resistances (p0350, p0352, p0355). The temperature adaptation of the resistances is not taken into account.		
p0389[0...n]	Excitation rated no-load current / Exc I_noload_rated		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [A]	10000.00 [A]	0.00 [A]
Description:	Sets the rated no-load current (I_F0) for the excitation.		

2 Parameters

2.2 List of parameters

p0390[0...n]	Rated excitation current / Exc I_{rated}		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [A]	10000.00 [A]	0.00 [A]
Description:	Setting the rated current (I _F) of the controlled excitation rectifier (DC master).		
p0391[0...n]	Current controller adaptation starting point Kp / I_{adapt} pt Kp		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.		
Dependency:	Refer to: p0392, p0393, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		
p0392[0...n]	Current controller adaptation starting point Kp adapted / I_{adapt} pt Kp adap		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 x p0393 is effective.		
Dependency:	Refer to: p0391, p0393, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		
p0393[0...n]	Current controller adaptation P gain scaling / I_{adapt} Kp scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6714
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the factor for the current controller P gain in the adaptation range (e.g. r0078 > p0392, if p0392 > p0391). The value is referred to p1715.		
Dependency:	Refer to: p0391, p0392, p1402, p1715		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		

Note: For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.
When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0395[0...n]	Actual stator resistance / R_stator act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6301, 6730, 6731, 6732
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the actual stator resistance (phase value). The parameter value also contains the temperature-independent cable resistance.		
Dependency:	In the case of induction motors the parameter is also affected by the motor temperature model. Refer to: p0350, p0352, p0620		
Note:	In each case, only the stator resistance of the active Motor Data Set is included with the stator temperature of the thermal motor model.		

r0396[0...n]	Actual rotor resistance / R_rotor act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6730
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the actual rotor/secondary section resistance (phase value). The parameter is affected by the motor temperature model.		
Dependency:	Refer to: p0354, p0620		
Note:	In each case, only the rotor resistance of the active Motor Data Set is included with the rotor temperature of the thermal motor model. This parameter is not used for synchronous motors (p0300 = 2xx).		

p0397[0...n]	Angle magnetic decoupling maximum angle / Magn decpl max_ang		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-90.0 [°]	90.0 [°]	90.0 [°]
Description:	Maximum angle when calculating the polynomial function to decouple the magnetic flux axes for permanent-magnet synchronous motors (see p0398, p0399).		

p0398[0...n]	Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000000	10.000000	0.000000
Description:	The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities. The angle offset can be described as a 3rd order polynomial function of the load current consumed: $\text{phiOffset} = f(C1 \cdot i_q + C3 \cdot i_q^3)$ This parameter is the coefficient C1; it describes the linear load impact effect.		
p0399[0...n]	Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.000000	10.000000	0.000000
Description:	The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities. The angle offset can be described as a 3rd order polynomial function of the load current consumed: $\text{phiOffset} = f(C1 \cdot i_q + C3 \cdot i_q^3)$ This parameter is the coefficient C3; it describes the cubic load impact effect.		
p0400[0...n]	Encoder type selection / Enc_typ sel		
VECTOR_G	Can be changed: C2(1, 4)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: 4700, 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10000	0
Description:	Selects the encoder from the list of encoder types supported.		
Value:	0: No encoder 3001: 1024 HTL A/B R 3002: 1024 TTL A/B R 3003: 2048 HTL A/B R 3005: 1024 HTL A/B 3006: 1024 TTL A/B 3007: 2048 HTL A/B 3008: 2048 TTL A/B 3009: 1024 HTL A/B unipolar 3011: 2048 HTL A/B unipolar 3020: 2048 TTL A/B R, with sense 9999: User-defined 10000: Identify encoder		
Notice:	An encoder type with p0400 < 9999 defines an encoder for which there is an encoder parameter list. When selecting a catalog encoder (p0400 < 9999) the parameters from the encoder parameter list cannot be changed (write protection). To remove write protection, the encoder type should be set to a third-party encoder (p0400 = 9999).		

Note: The connected encoder can be identified by setting p0400 to 10000 or 10100. This means that the encoder must support this, and is possible in the following cases:

- motor with DRIVE-CLiQ
- encoder with EnDat interface
- DRIVE-CLiQ encoder
- encoder with SSI interface (only 10100)

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

When using an encoder with track A/B and zero pulse, as standard, fine synchronization is not set using a zero mark. If, for a synchronous motor, fine synchronization is to be realized using a zero mark, then the following must be executed:

- set p0400 to 9999
- set p0404.15 to 1

Prerequisite:

Coarse synchronization must be selected (e.g. pole position identification) and the zero pulse of the encoder must be either mechanically or electronically (p0431) adjusted to the pole position.

For p0400 = 10000 the following applies:

The connected encoder is identified. If an identification is not possible, then p0400 is set to 0.

For p0400 = 10100 the following applies:

The connected encoder is identified. If identification is not possible, then p0400 remains set = 10100, and the system waits until identification is possible.

p0400[0...n]	Encoder type selection / Enc_typ sel		
ENC	Can be changed: C2(1, 4) Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 10100	Access level: 1 Func. diagram: 4700, 4704 Unit selection: - Expert list: 1 Factory setting 0
Description:	Selects the encoder from the list of encoder types supported.

3109: 2000 nm, TTL, A/B R distance-coded
9999: User-defined
10000: Identify encoder
10050: Encoder with EnDat2.x interface identified
10051: DRIVE-CLiQ encoder identified
10058: Digital encoder (absolute) identified
10059: Digital encoder (incremental) identified
10100: Identify encoder (waiting)

Notice:

An encoder type with p0400 < 9999 defines an encoder for which there is an encoder parameter list. When selecting a catalog encoder (p0400 < 9999) the parameters from the encoder parameter list cannot be changed (write protection). To remove write protection, the encoder type should be set to a third-party encoder (p0400 = 9999).

Note:

The connected encoder can be identified by setting p0400 to 10000 or 10100. This means that the encoder must support this, and is possible in the following cases:

- motor with DRIVE-CLiQ
- encoder with EnDat interface
- DRIVE-CLiQ encoder
- encoder with SSI interface (only 10100)

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

When using an encoder with track A/B and zero pulse, as standard, fine synchronization is not set using a zero mark. If, for a synchronous motor, fine synchronization is to be realized using a zero mark, then the following must be executed:

- set p0400 to 9999
- set p0404.15 to 1

Prerequisite:

Coarse synchronization must be selected (e.g. pole position identification) and the zero pulse of the encoder must be either mechanically or electronically (p0431) adjusted to the pole position.

For p0400 = 10000 the following applies:

The connected encoder is identified. If an identification is not possible, then p0400 is set to 0.

For p0400 = 10100 the following applies:

The connected encoder is identified. If identification is not possible, then p0400 remains set = 10100, and the system waits until identification is possible.

p0402[0...n]	Gearbox type selection / Gearbox type sel		
VECTOR_G, ENC	Can be changed: C2(1, 4)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	10100	9999
Description:	Selects the gearbox type to pre-set the inversion and the gearbox factor. Measuring gear factor = motor or load revolutions / encoder revolutions.		
Value:	1: Gearbox 1:1 not inverted 2: Gearbox 2:7 inverted 3: Gearbox 4:17 inverted 4: Gearbox 2:10 inverted 9999: Gearbox user-defined 10000: Identify gearbox 10100: Identify gearbox		
Dependency:	Refer to: p0410, p0432, p0433		
Note:	For p0402 = 1: Automatic setting of p0410 = 0000 bin, p0432 = 1, p0433 = 1. For p0402 = 2: Automatic setting of p0410 = 0011 bin, p0432 = 7, p0433 = 2. For p0402 = 3: Automatic setting of p0410 = 0011 bin, p0432 = 17, p0433 = 4. For p0402 = 4: Automatic setting of p0410 = 0011 bin, p0432 = 10, p0433 = 2. For p0402 = 9999: No automatic setting of p0410, p0432, p0433. The parameters should be manually set. For p0402 = 10000: It is only possible to identify the gearbox type for a motor with DRIVE-CLiQ. Parameters p0410, p0432 and p0433 are set corresponding to the identified gearbox. If an identification is not possible, then p0402 is set to 9999.		

p0404[0...n]	Encoder configuration effective / Enc_config eff				
VECTOR_G	Can be changed: C2(4)	Calculated: -	Access level: 3

	14	Distance-coded zero mark	Yes	No	-
	15	Commutation with zero mark (not ASM)	Yes	No	-
	16	Acceleration	Yes	No	-

2 Parameters

2.2 List of parameters

17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excitation	Yes	No	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

If an SSI encoder (bit 9 = 1) is used as motor encoder for permanent-magnet synchronous motors, then this is only permissible in conjunction with an additional A/B track (bit 3 = 1 or bit 4 = 1).

Note: ZM: Zero mark

SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

For bit 01, 02 (absolute encoder, multiturn encoder):

These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

For bit 10 (DRIVE-CLiQ encoder):

This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

For bit 12 (equidistant zero mark):

The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).

The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.

For bit 13 (irregular zero mark):

The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.

For bit 14 (distance-coded zero mark):

The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

For bit 15 (commutation with zero mark):

Only applicable for synchronous motors.

The function can be deselected by priority via p0430.23.

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: ZM: Zero mark
SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

For bit 01, 02 (absolute encoder, multiturn encoder):
These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

For bit 10 (DRIVE-CLiQ encoder):
This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

For bit 12 (equidistant zero mark):
The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).
The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.

For bit 13 (irregular zero mark):
The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.

For bit 14 (distance-coded zero mark):
The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

For bit 15 (commutation with zero mark):
Only applicable for synchronous motors.
The function can be deselected by priority via p0430.23.
For distance-coded zero marks, the following applies:
The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).
The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.
The fine synchronization is only started after two zero marks have been passed.

2 Parameters

2.2 List of parameters

p0405[0...n]	Square-wave encoder track A/B / Sq-wave enc A/B			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 1111 bin	
Description:	Settings for the track A/B in a square-wave encoder. For square-wave encoders, p0404.3 must also be 1.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Signal	Bipolar	Unipolar
	01	Level	TTL	HTL
	02	Track monitoring	A/B <> -A/B	None
	03	Zero pulse	Same as A/B track	24 V unipolar
	04	Switching threshold	High	Low
	05	Pulse/direction	Active	Inactive
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.			
Note:	For bit 02: When the function is activated, track monitoring can be deactivated by setting p0437.26. For bit 05: When the function is activated, a frequency setpoint and a direction for traveling can be entered via an encoder interface.			
p0407[0...n]	Linear encoder grid division / Enc grid div			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [nm]	250000000 [nm]	16000 [nm]	
Description:	Sets the grid division for a linear encoder. In conjunction with the values in p0418/p0419, the grid division defines the transfer format for position actual values Gn_XIST1 (r0482) and Gn_XIST2 (r0483).			
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.			
Note:	The lowest permissible value is 250 nm. This value does not always correspond to the grid division of the measuring device. For a DRIVE-CLiQ encoder, a value is entered here that facilitates optimum transfer of the resolution (p0422).			
p0408[0...n]	Rotary encoder pulse number / Rot enc pulse No.			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	16777215	2048	
Description:	Sets the number of pulses for a rotary encoder. In conjunction with the values in p0418/p0419, the pulse number defines the transfer format for position actual values Gn_XIST1 (r0482) and Gn_XIST2 (r0483).			

- Notice:** This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.
- Note:** The smallest permissible value is 1 pulse.
The number of pole pairs for a resolver is entered here.
This value does not always correspond to the pulse number of the measuring device. For a DRIVE-CLiQ encoder, a value is entered here that facilitates optimum transfer of the resolution (p0423).

p0410[0...n]		Encoder inversion actual value / Enc inv act value		
VECTOR_G, ENC	Can be changed: C2(4) Data type: Unsigned16	Calculated: - Dyn. index: EDS, p0140	Access level: 3 Func. diagram: 4704, 4710, 4711, 4715	
	P-Group: Encoder Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1	
	Min -	Max -	Factory setting 0000 bin	
Description:	Setting to invert actual values.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Invert speed actual value	Yes	No
	01	Invert position actual value	Yes	No
Note:	The inversion influences the following parameters: Bit 00: r0061, r0063 (exception: encoderless control), r0094 Bit 01: r0482, r0483			

p0410[0...n]		Encoder inversion actual value / Enc inv act value		
ENC (Lin_enc)	Can be changed: C2(4) Data type: Unsigned16	Calculated: - Dyn. index: EDS, p0140	Access level: 3 Func. diagram: 4704, 4710, 4711, 4715	
	P-Group: Encoder Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1	
	Min -	Max -	Factory setting 0000 bin	
Description:	Setting to invert actual values.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Invert velocity actual value	Yes	No
	01	Invert position actual value	Yes	No
Note:	The inversion influences the following parameters: Bit 00: r0061, r0063 (exception: encoderless control), r0094 Bit 01: r0482, r0483			

p0411[0...n]		Measuring gear configuration / Meas gear config		
VECTOR_G, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: 4704 Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Sets the configuration for position tracking of a measuring gear.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Measuring gear activate position tracking	Yes	No
	01	Axis type	Linear axis	Rotary axis
	02	Measuring gear reset position	Yes	No
	03	Meas. gearbox, activate pos. tracking for incremental encoders	Yes	No
Notice:	For p0411.3 = 1 the following applies: If position tracking is activated for incremental encoders, only the position actual value is stored. Axis or encoder motion is not detected when deactivated! Any tolerance window entered in p0413 has no effect.			
Note:	For the following events, the non-volatile, saved position values are automatically reset: - when an encoder replacement has been identified. - when changing the configuration of the Encoder Data Set (EDS).			

p0412[0...n]		Measuring gear absolute encoder rotary revolutions virtual / Abs rot rev		
VECTOR_G, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 4194303	Access level: 1 Func. diagram: 4704 Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the number of rotations that can be resolved for a rotary encoder with activated position tracking of the measuring gear.			
Dependency:	This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking (p0411.0 = 1) and for an incremental encoder with activated position tracking (p0411.3 = 1).			
Note:	The resolution that is set must be able to be represented using r0483. For rotary axes/modulo axes, the following applies: p0411.0 = 1: This parameter is pre-set with p0421 and can be changed. p0411.3 = 1: The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419). For linear axes, the following applies: p0411.0 = 1: This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed. p0411.3 = 1: The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).			

p0413[0...n]	Measuring gear position tracking tolerance window / Pos track window		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	4294967300.00	0.00
Description:	Sets a tolerance window for position tracking. After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated: Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value. Difference outside the tolerance window --> An appropriate message is output.		
Dependency:	Refer to: F31501, F32501, F33501		
Caution:	Rotation, for example through a complete encoder range is not detected.		
			
Note:	The value is entered in integer (complete) encoder pulses. For p0411.0 = 1, the value is automatically pre-assigned quarter of the encoder range. Example: Quarter of the encoder range = (p0408 * p0421) / 4 It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).		
p0414[0...n]	Redundant coarse position value relevant bits (identified) / Relevant bits		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	16
Description:	Sets the number of relevant bits for the redundant coarse position value.		
p0415[0...n]	Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	31	14
Description:	Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.		
Note:	MSB: Most Significant Bit		
p0416[0...n]	Non safety-relevant meas. steps position value POS1 (detected) / nsrPos1		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4294967295	22000
Description:	Sets the non safety-relevant measuring steps of POS1.		
Dependency:	Refer to: r0473, p9513		

p0417[0...n]	Encoder safety comparison algorithm (detected) / Safety comp_algo		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	255	255
Description:	Sets the comparison algorithm for the encoder position monitoring functions.		
Value:	0: Reserved 10: Reserved 11: DQL linear non-binary safety algorithm 12: SMC30 safety algorithm 255: Safety algorithm unknown		
Dependency:	Refer to: p9541		
p0418[0...n]	Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4010, 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	18	11
Description:	Sets the fine resolution in bits of the incremental position actual values.		
Note:	The parameter applies for the following process data: - Gx_XIST1 - Gx_XIST2 for reference mark or flying measurement The fine resolution specifies the fraction between encoder pulses. Depending on the physical measurement principle, an encoder pulse can be broken down into a different number of fractions (e.g. squarewave encoder: 2 bit = resolution 4, sin/cos encoder: Typical 11 bit = resolution 2048). For a squarewave encoder, with the factory setting, the least significant bits have the value zero, i.e. they do not supply any useful information. For especially high quality measuring systems, the fine resolution must be increased corresponding to the available accuracy.		
p0419[0...n]	Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: EDS, p0140	Func. diagram: 4704, 4710
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	18	9
Description:	Sets the fine resolution in bits of the absolute position actual values.		
Dependency:	Refer to: p0418		
Note:	This parameter applies to process data Gx_XIST2 when reading the absolute value.		

p0420[0...n]	Encoder connection / Enc_connection				
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4		
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Selecting the encoder connection.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	SUB-D	Yes	No	-
	01	Terminal	Yes	No	-

p0421[0...n]	Absolute encoder rotary multiturn resolution / Enc abs multiturn			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	4294967295	4096	
Description:	Sets the number of rotations that can be resolved for a rotary absolute encoder.			
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.			

p0422[0...n]	Absolute encoder linear measuring step resolution / Enc abs meas step			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [nm]	4294967295 [nm]	100 [nm]	
Description:	Sets the resolution of the absolute position for a linear absolute encoder.			
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.			
Note:	The serial protocol of an absolute encoder provides the position with a certain resolution (e.g. 100 nm). This value must be entered here.			

p0423[0...n]	Absolute encoder rotary singleturn resolution / Enc abs singleturn			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: 4704	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1073741823	8192	
Description:	Sets the number of measuring steps per revolution for a rotary absolute encoder. The resolution refers to the absolute position.			
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.			

2 Parameters

2.2 List of parameters

p0424[0...n]	Encoder linear zero mark distance / Enc lin ZM_dist		
VECTOR_G, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0 [mm]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20 [mm]
Description:	Sets the distance between two zero marks for a linear encoder. This information is used for zero mark monitoring.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For distance-coded zero marks this parameter signifies the basic distance.		
<hr/>			
p0425[0...n]	Encoder rotary zero mark distance / Enc rot dist ZM		
VECTOR_G, ENC	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 16777215	Access level: 3 Func. diagram: 4704, 8570 Unit selection: - Expert list: 1 Factory setting 2048
Description:	Sets the distance in pulses between two zero marks for a rotary encoder. This information is used for zero mark monitoring.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For distance-coded zero marks this parameter signifies the basic distance.		
<hr/>			
p0426[0...n]	Encoder zero mark differential distance / Enc ZM Dif_dist		
VECTOR_G, ENC	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 1	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the differential pitch for distance-coded zero marks (signal periods). The value corresponds to jump displacement of "zero mark with interference".		
Dependency:	This function can only be used when a Sensor Module property is available (r0459.9 = 1).		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
<hr/>			
p0427[0...n]	Encoder SSI baud rate / Enc SSI baud rate		
VECTOR_G, ENC	Can be changed: C2(4) Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0 [kHz]	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 65535 [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100 [kHz]
Description:	Sets the baud rate for an SSI encoder.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		

Note: SSI: Synchronous Serial Interface

p0428[0...n]	Encoder SSI monoflop time / Enc SSI t_monoflop		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [µs]	65535 [µs]	30 [µs]
Description:	Sets the minimum delay time between two data transfers of the absolute value for an SSI encoder.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		

p0429[0...n]	Encoder SSI configuration / Enc SSI config				
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 bin		
Description:	Sets the configuration for an SSI encoder.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Transfer code	Binary code	Gray code	-
	02	Transfer absolute value twice	Yes	No	-
	06	Data line during the monoflop time	High level	Low level	-
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.				
Note:	For bit 06: The quiescent signal level of the data line corresponds to the inverted, set level.				

p0430[0...n]	Sensor Module configuration / SM config				
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	1110 0000 0000 1000 0000 0000 0000 0000 bin		
Description:	Sets the configuration of the Sensor Module.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	17	Burst oversampling	Yes	No	-
	18	Continuous oversampling (reserved)	Yes	No	-
	19	Safety position actual value sensing	Yes	No	-
	20	Speed calculation mode (only SMC30)	Incremental diff	Flank time meas	-
	21	Zero mark tolerance	Yes	No	-
	22	Rotor position adaptation	Yes	No	-
	23	Deselect commutation with zero mark	Yes	No	-
	24	Commutation with selected zero mark	Yes	No	-
	25	Switch off encoder voltage supply during parking	Yes	No	-
	27	Extrapolate position values	Yes	No	-
	28	Cubic correction	Yes	No	-
	29	Phase correction	Yes	No	-
	30	Amplitude correction	Yes	No	-
	31	Offset correction	Yes	No	-

2 Parameters

2.2 List of parameters

- Notice:** A bit-wise configuration is only possible if the corresponding property is also present in r0458.
- Note:**
- For bit 17 (burst oversampling):
 - if bit = 1, burst oversampling is switched on.
 - For bit 18 (continuous oversampling):
 - if bit = 1, continuous oversampling is switched on.
 - For bit 19 (Safety position actual value sensing):
 - if bit = 1, the Safety position actual value is transferred in the cyclic telegram.
 - For bit 20 (speed calculation mode):
 - if bit = 1, the speed is calculated via incremental difference without extrapolation.
 - if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode.
 - For bit 21 (zero mark tolerance):
 - if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.
 - For bit 22 (rotor position adaptation):
 - if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.
 - For bit 23 (deselect commutation with zero mark):
 - the bit should only be set for encoders that have not been adjusted.
 - For bit 24 (commutation with selected zero mark):
 - if bit = 1, the commutation position is corrected via a selected zero mark.
 - For bit 25 (disconnect the encoder power supply on parking):
 - if bit = 1, the encoder power supply is switched off on parking (0 V).
 - if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.
 - For bit 27 (extrapolate position values):
 - if bit = 1, the extrapolation of the position values is activated.
 - For bit 28 (cubic correction):
 - if bit = 1, the cubic correction for track A/B sine is activated.
 - For bit 29 (phase correction):
 - if bit = 1, the phase correction for track A/B sine is activated.
 - For bit 30 (amplitude correction):
 - if bit = 1, the amplitude correction for track A/B sine is activated.
 - For bit 31 (offset correction):
 - if bit = 1, the offset correction for track A/B sine is activated.

p0430[0...n]

Sensor Module configuration / SM config

ENC (Lin_enc)	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1110 0000 0000 1000 0000 0000 0000 0000 bin

Description: Sets the configuration of the Sensor Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	17	Burst oversampling	Yes	No	-
	18	Continuous oversampling (reserved)	Yes	No	-

	24	Commutation with selected zero mark	Yes	No	-
	25	Switch off encoder voltage supply during parking	Yes	No	-

27	Extrapolate position values	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Notice: A bit-wise configuration is only possible if the corresponding property is also present in r0458.

Note: For bit 17 (burst oversampling):

- if bit = 1, burst oversampling is switched on.

For bit 18 (continuous oversampling):

- if bit = 1, continuous oversampling is switched on.

For bit 19 (Safety position actual value sensing):

- if bit = 1, the Safety position actual value is transferred in the cyclic telegram.

For bit 20 (speed calculation mode):

- if bit = 1, the speed is calculated via incremental difference without extrapolation.

- if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode.

For bit 21 (zero mark tolerance):

- if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.

For bit 22 (rotor position adaptation):

- if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.

For bit 23 (deselect commutation with zero mark):

- the bit should only be set for encoders that have not been adjusted.

For bit 24 (commutation with selected zero mark):

- if bit = 1, the commutation position is corrected via a selected zero mark.

For bit 25 (disconnect the encoder power supply on parking):

- if bit = 1, the encoder power supply is switched off on parking (0 V).

- if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.

For bit 27 (extrapolate position values):

- if bit = 1, the extrapolation of the position values is activated.

For bit 28 (cubic correction):

- if bit = 1, the cubic correction for track A/B sine is activated.

For bit 29 (phase correction):

- if bit = 1, the phase correction for track A/B sine is activated.

For bit 30 (amplitude correction):

- if bit = 1, the amplitude correction for track A/B sine is activated.

For bit 31 (offset correction):

- if bit = 1, the offset correction for track A/B sine is activated.

p0431[0...n]

Angular commutation offset / Ang_com offset

VECTOR_G

Can be changed: C2(4)

Calculated: -

Access level: 3

Data type: FloatingPoint32

Dyn. index: EDS, p0140

Func. diagram: -

P-Group: Encoder

Unit group: -

Unit selection: -

Not for motor type: ASM, REL

Scaling: -

Expert list: 1

Min

Max

Factory setting

-180.00 [°]

180.00 [°]

0.00 [°]

Description:

Sets the angular commutation offset.

Dependency:

The value is taken into account in r0094.

Refer to: r0094, r1778

Notice:

When the firmware is upgraded from V2.3 to V2.4 or higher, the value must be reduced by 60° if all the following conditions are fulfilled:

- the motor is a synchronous motor (p0300 = 2, 2xx, 4, 4xx).

- the encoder is a resolver (p0404.23 = 1).

- the actual speed value is inverted (p0410.0 = 1).

2 Parameters

2.2 List of parameters

The angular commutation offset cannot be generally taken from other drive systems. As a minimum - the sign of the offset determined for SIMODRIVE 611 digital and SIMODRIVE 611 universal must be reversed for SINAMICS (p0431 (SINAMICS) = -p1016 (SIMODRIVE)).

Note: Angular commutation offset, angular difference between electrical position of encoder and flux position.

For p0404.5 = 1 (track C/D) the following applies:

The angular offset in p0431 acts on track A/B, the zero mark on track C/D.

For p0404.6 = 1 (Hall sensor) the following applies:

The angular offset in p0431 acts on track A/B and the zero mark.

p0432[0...n]	Gearbox factor encoder revolutions / Grbx_fact enc_rev		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	1048576	1
Description:	Sets the encoder revolutions for the gearbox factor of the encoder evaluation. The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.		
Dependency:	This parameter can only be set for p0402 = 9999. Refer to: p0402, p0410, p0433		
Note:	Negative gearbox factors should be implemented with p0410. For synchronous motors, the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: $(p0314 * p0433) / p0432$		

p0433[0...n]	Gearbox factor motor/load revolutions / Gbx_fact mot/load		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	1048576	1
Description:	Sets the motor and load revolutions for the gearbox factor of the encoder evaluation. The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.		
Dependency:	This parameter can only be set for p0402 = 9999. Refer to: p0402, p0410, p0432		
Note:	Negative gearbox factors should be implemented with p0410. For synchronous motors, the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: $(p0314 * p0433) / p0432$		

p0434[0...n]	Encoder SSI error bit / Enc SSI error bit		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Sets the position and level of the error bit in the SSI protocol.		
Notice:	The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.		

Note: Value = dcba
 ba: Position of the error bit in the protocol (0 ... 63).
 c: Level (0: Low level, 1: High level).
 d: Status of the evaluation (0: Off, 1: On with 1 error bit, 2: On with 2 error bits ... 9: On with 9 error bits).
 For several error error bits, the following applies:
 - the position specified under ba and the additional bits are assigned increasing consecutively.
 - the level set under c applies to all error bits.
 Example:
 p0434 = 1013
 --> The evaluation is switched in and the error bit is at position 13 with a low level.
 p0434 = 1113
 --> The evaluation is switched in and the error bit is at position 13 with a high level.

p0435[0...n]	Encoder SSI alarm bit / Enc SSI alarm bit		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0

Description: Sets the position and level of the alarm bit in the SSI protocol.
Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.
Note: Value = dcba
 ba: Position of the alarm bit in protocol (0 ... 63).
 c: Level (0: Low level, 1: High level).
 d: Status of the evaluation (0: Off, 1: On with 1 alarm bit, 2: On with 2 alarm bits ... 9: On with 9 alarm bits).
 The following applies for several alarm bits:
 - the position specified under ba and the additional bits are assigned increasing consecutively.
 - the level set under c applies to all error bits.
 Example:
 p0435 = 1014
 --> The evaluation is switched in and the alarm bit is at position 14 with a low level.
 p0435 = 1114
 --> The evaluation is switched in and the alarm bit is at position 14 with a high level.

p0436[0...n]	Encoder SSI parity bit / Enc SSI parity bit		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0

Description: Sets the position and parity of the parity bit in the SSI protocol.
Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.
Note: Value = dcba
 ba: Position of the parity bit in the protocol (0 ... 63).
 c: Parity (0: even, 1: uneven).
 d: State of the evaluation (0: Off, 1: On).
 Example:
 p0436 = 1015
 --> The evaluation is switched in and the parity bit is at position 15 with even parity.
 p0436 = 1115
 --> The evaluation is switched in and the parity bit is at position 15 with uneven parity.

p0437[0...n]		Sensor Module configuration extended / SM config ext			
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0011 0000 0000 0000 0000 1000 0000 0000 bin		
Description:	Sets the extended configuration of the Sensor Module.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Data logger	Yes	No	-
	01	Zero mark edge detection	Yes	No	-
	02	Correction position actual value XIST1	Yes	No	-
	04	Edge evaluation bit 0	Yes	No	-
	05	Edge evaluation bit 1	Yes	No	-
	06	Freeze the speed actual value for dn/dt errors	Yes	No	-
	07	Do not accumulate the number of incorrect pulses	Yes	No	-
	11	Fault handling after PROFIdrive	Yes	No	-
	12	Activate additional messages	Yes	No	-
	13	Support absolute position for incremental encoder	Yes	No	4750
	22	Resolution absolute position as factor	Yes	No	-
	25	Deselect monitoring multiturn representation in Gx_XIST2	Yes	No	-
	26	Deselect track monitoring	Yes	No	-
	28	EnDat linear encoder monitoring incremental/absolute	Yes	No	-
	29	EnDat encoder initialization with high accuracy	Yes	No	-
	31	Analog unipolar track monitoring	Yes	No	-
Dependency:	Refer to: p0430, r0459				
Note:	A value of zero is displayed if an encoder is not present.				
	For bit 00: When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.				
	For bit 01: If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark. For bit = 1, the zero mark is evaluated depending on the direction of rotation detected. For a positive direction of rotation, the positive edge of the zero mark is considered and for a negative direction of rotation, the negative edge of the zero mark.				
	For bit 02: When the bit is set, for a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulse number is corrected. If the bit is not set, encoder fault F3x131 is triggered.				
	For bits 05, 04: The actual hardware only supports 1x or 4x signal evaluation. Bit 5/4 = 0/0: Signal evaluation per period, 4x. Bit 5/4 = 1/0: signal evaluation per period, 4x with speed calculation over the complete pulse. Bit 5/4 = 0/1: Signal evaluation per period, 1x. Bit 5/4 = 1/1: Illegal setting.				
	For bit 06: If the function is active, when dn/dt monitoring responds, the speed actual value is internally frozen for a time equivalent to two current controller sampling times. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.				
	For bit 07: When the bit is not set, the incorrect pulses that have occurred up until now are accumulated in p4688. When the bit is not set, p4688 indicates the incorrect pulses that have still not been corrected.				

For bit 11:

If the bit is set, the Sensor Module checks within a certain time grid whether the fault cause is still present. This enables the Sensor Module to switch from the fault state to the operating state and provide valid actual values automatically. The faults are displayed until the user acknowledges them.

For bit 12:

Additional fault messages can be activated for extended fault diagnostics.

For bit 13:

When the bit is set, for an incremental encoder with zero mark, the absolute value in Gn_XIST2 can be requested via Gn_STW.13. The absolute value is only valid after passing the zero mark.

For bit 22:

When the bit is set, the resolution of the absolute position in the serial protocol is set using distribution factor in p4630. The resolution for the absolute position is then calculated using p0407/p4630.

For bit 26:

Track monitoring is deactivated for the square-wave encoders when the bit is set, even if the monitoring function is selected in p0405.2.

For bit 28:

Monitoring of the difference between incremental and absolute position in the case of linear encoders.

For bit 29:

When the bit is set, the EnDat encoder is initialized under a certain speed and, therefore, with high accuracy. If initialization at a higher speed is requested, fault F31151, F32151, or F33151 is output.

For bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

2 Parameters

2.2 List of parameters

Note: A value of zero is displayed if an encoder is not present.

For bit 00:
When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.

For bit 01:
If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark.
For bit = 1, the zero mark is evaluated depending on the direction detected. For a positive direction, the positive edge of the zero mark is considered and for a negative direction, the negative edge of the zero mark.

For bit 02:
When the bit is set, for a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulse number is corrected. If the bit is not set, encoder fault F3x131 is triggered.

For bits 05, 04:
Bit 5/4 = 0/0: Signal evaluation per period, 4x.
Bit 5/4 = 1/0: Signal evaluation per period, 4x.
Bit 5/4 = 0/1: Signal evaluation per period, 1x.
Bit 5/4 = 1/1: Illegal setting.

For bit 06:
If the function is active, when dn/dt monitoring responds, the velocity actual value is internally frozen for a time equivalent to two current controller sampling times. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.

For bit 07:
When the bit is not set, the incorrect pulses that have occurred up until now are accumulated in p4688.
When the bit is set, p4688 indicates the incorrect pulses that have still not been corrected.

For bit 29:
When the bit is set, the EnDat encoder is initialized under a certain velocity and, therefore, with high accuracy. If initialization at a higher velocity is requested, fault F31151, F32151, or F33151 is output.

For bit 31:
When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0438[0...n]	Squarewave encoder filter time / Enc t_filt		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	100.00 [µs]	0.64 [µs]

Description: Sets the filter time for a squarewave encoder.
The hardware of the squarewave encoder only supports the following values:
0: No filtering
0.04 µs
0.64 µs
2.56 µs
10.24 µs
20.48 µs

Dependency: Refer to: r0452

Notice: If the filter time is too long, the track signals A/B/R may be suppressed and the appropriate messages output.

Note: The most suitable filter time depends on the number of pulses and maximum speed of the square-wave encoder.
The filter time is automatically corrected to the next value when entering a non-specified value. In this case, no message is output.
The effective filter time is displayed in r0452.

p0439[0...n]	Encoder ramp-up time / Enc ramp-up time		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	65535 [ms]	0 [ms]
Description:	Sets the ramp-up time for the encoder. The encoder supplies stable track signals once this time has elapsed.		
Dependency:	This function can only be used when a Sensor Module property is available (r0459.9 = 1).		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).		
p0440[0...n]	Copy encoder serial number / Copy enc ser_no		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Copies the actual serial number of the encoder belonging to this Encoder Data Set (EDS) to p0441 ... p0445. Example: For p0440[0] = 1, the serial number of the encoder belonging EDS0 is copied to p0441[0] ... p0445[0].		
Value:	0: No action 1: Transfer serial number		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464, p1990		
Note:	For encoders with serial number, encoder replacement is monitored in order to request angular commutation calibration (adjustment) for motor encoders and absolute calibration for direct measuring systems with absolute value data. The serial number, which from then onwards is used for monitoring purposes, can be transferred using p0440. Copying is automatically started in the following cases: 1.) When commissioning 1FT6, 1FK6, 1FK7 motors. 2.) When writing into p0431. 3.) For p1990 = 1. p0440 is automatically set to 0 when the copying has been completed. In order to permanently accept the copied values, it is necessary to save in a non-volatile fashion (p0977).		
p0441[0...n]	Encoder commissioning serial number part 1 / Enc comm ser_no 1		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex
Description:	Serial number part 1 of the encoder for the commissioning.		
Dependency:	Refer to: p0440, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464		
Note:	A value of zero is displayed if an encoder is not present.		

p0442[0...n]	Encoder commissioning serial number part 2 / Enc comm ser_no 2		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex
Description:	Serial number part 2 of the encoder for the commissioning.		
Dependency:	Refer to: p0440, p0441, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464		
Note:	A value of zero is displayed if an encoder is not present.		
p0443[0...n]	Encoder commissioning serial number part 3 / Enc comm ser_no 3		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex
Description:	Serial number part 3 of the encoder for the commissioning.		
Dependency:	Refer to: p0440, p0441, p0442, p0444, p0445, r0460, r0461, r0462, r0463, r0464		
Note:	A value of zero is displayed if an encoder is not present.		
p0444[0...n]	Encoder commissioning serial number part 4 / Enc comm ser_no 4		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex
Description:	Serial number part 4 of the encoder for the commissioning.		
Dependency:	Refer to: p0440, p0441, p0442, p0443, p0445, r0460, r0461, r0462, r0463, r0464		
Note:	A value of zero is displayed if an encoder is not present.		
p0445[0...n]	Encoder commissioning serial number part 5 / Enc comm ser_no 5		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex
Description:	Serial number part 5 of the encoder for the commissioning.		
Dependency:	Refer to: p0440, p0441, p0442, p0443, p0444, r0460, r0461, r0462, r0463, r0464		
Note:	A value of zero is displayed if an encoder is not present.		

p0446[0...n]	Encoder SSI number of bits before the absolute value / Enc SSI bit before		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Sets the number of bits before the absolute value in the SSI protocol.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For example, error bit, alarm bit or parity bit can be positioned at these bits.		
p0447[0...n]	Encoder SSI number of bits absolute value / Enc SSI bit val		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	25
Description:	Sets the number of bits for the absolute value in the SSI protocol.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
p0448[0...n]	Encoder SSI number of bits after the absolute value / Enc SSI bit after		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Sets the number of bits after the absolute value in the SSI protocol.		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	For example, error bit, alarm bit or parity bit can be positioned at these bits.		
p0449[0...n]	Encoder SSI number of bits filler bits / Enc SSI fill bits		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	1
Description:	Sets the number of filler bits for double absolute value transfer in the SSI protocol.		
Dependency:	Refer to: p0429		
Notice:	This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400). When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.		
Note:	This parameter is only of significance for p0429.2 = 1.		

2 Parameters

2.2 List of parameters

r0451[0...2]	Commutation angle factor / Enc commut_factor		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 4710
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the relationship between the electrical and mechanical pole positions.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Note:	A value of zero is displayed if an encoder is not present.		
r0452[0...2]	Squarewave encoder filter time display / Enc t_filt displ		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [µs]	- [µs]	- [µs]
Description:	Displays the effective filter time for a squarewave encoder. The filter time is set using p0438.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0438		
Note:	A value of zero is displayed if an encoder is not present.		
r0452	Squarewave encoder filter time display / Enc t_filt displ		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [µs]	- [µs]	- [µs]
Description:	Displays the effective filter time for a squarewave encoder. The filter time is set using p0438.		
Dependency:	Refer to: p0438		
Note:	A value of zero is displayed if an encoder is not present.		
p0453[0...n]	Pulse encoder evaluation zero speed measuring time / Enc_ev n_0 t_meas		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [ms]	10000.00 [ms]	1000.00 [ms]
Description:	Sets the measuring time for evaluating zero speed. If no pulses are detected from track A/B during this time, a speed actual value of zero is output.		
Dependency:	Refer to: r0452		
Note:	This function is required for slow-running motors so that actual speeds close to zero can be output correctly.		

p0454[0...n]	Sensor Module configuration extended Part 2 / SM config ext 2		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin
Description:	Sets the extended configuration Part 2 of the Sensor Module.		
Dependency:	Refer to: r0457		

r0455[0...2]	Encoder configuration recognized / Enc_config recog				
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the detected encoder configuration.				
	In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).				
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Linear encoder	Yes	No	-
	01	Absolute encoder	Yes	No	-
	02	Multiturn encoder	Yes	No	-
	03	Track A/B square-wave	Yes	No	-
	04	Track A/B sine	Yes	No	-
	05	Track C/D	Yes	No	-
	06	Hall sensor	Yes	No	-
	08	EnDat encoder	Yes	No	-
	09	SSI encoder	Yes	No	-
	10	DRIVE-CLiQ encoder	Yes	No	-
	11	Digital encoder	Yes	No	-
	12	Equidistant zero mark	Yes	No	-
	13	Irregular zero mark	Yes	No	-
	14	Distance-coded zero mark	Yes	No	-
	15	Commutation with zero mark (not ASM)	Yes	No	-
	16	Acceleration	Yes	No	-
	17	Track A/B analog	Yes	No	-
	20	Voltage level 5 V	Yes	No	-
	21	Voltage level 24 V	Yes	No	-
	22	Remote sense (only SMC30)	Yes	No	-
	23	Resolver excitation	Yes	No	-
Dependency:	Refer to: p0404				
Note:	ZM: Zero mark				
	This parameter is only used for diagnostics.				
	A value of zero is displayed if an encoder is not present.				
	For bit 20, 21 (voltage level 5 V, voltage level 24 V):				
	The voltage level cannot be detected. Therefore, these bits are always set to 0.				

r0455		Encoder configuration recognized / Enc_config recog																																																																																																																
ENC	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Dependency:

Refer to: p0437, p0600, p0601

Note:

A value of zero is displayed if an encoder is not present.

For bit 11:

When the property is set, the following parameters can be changed without the actual value in the encoder interface becoming invalid (state r0481.14 = 1 "parking encoder active"):

p0314, p0315, p0430, p0431, p0441, p0442, p0443, p0444, p0445

For bit 12:

The extended functions can be configured using p0437.

For bit 13:

Encoder faults can be acknowledged via Gn_STW.15.

For bit 14:

Only for internal Siemens use.

For bit 23:

When the property is set, commutation with zero mark can be deselected using p0430.23.

For bit 24:

If the property is set, commutation to the selected zero mark can be carried out.

	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the actual serial number part 3 of the appropriate encoder.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0463, r0464		

2 Parameters

2.2 List of parameters

r0462	Encoder serial number part 3 / Enc ser_no 3		
ENC	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual serial number part 3 of the appropriate encoder.		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0463, r0464		
<hr/>			
r0463[0...2]	Encoder serial number part 4 / Enc ser_no 4		
VECTOR_G	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual serial number part 4 of the appropriate encoder.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0464		
<hr/>			
r0463	Encoder serial number part 4 / Enc ser_no 4		
ENC	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual serial number part 4 of the appropriate encoder.		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0464		
<hr/>			
r0464[0...2]	Encoder serial number part 5 / Enc ser_no 5		
VECTOR_G	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual serial number part 5 of the appropriate encoder.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463		

r0464	Encoder serial number part 5 / Enc ser_no 5		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the actual serial number part 5 of the appropriate encoder.		
Dependency:	Refer to: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463		
r0465[0...27]	Encoder 1 identification number/serial number / Enc1 ID_no/Ser_no		
VECTOR_G, ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the identification/serial number of encoder 1. Index 0 = first character of the identification number ... Index x = 20 hex (blank) --> separation between the identification number of serial number Index x + 1 = 2F hex (slash) --> separation between the identification number of serial number Index x + 2 = 20 hex (blank) --> separation between the identification number of serial number Index x + 3 = first character of the serial number ... Index y with contents = last character of the serial number		
Dependency:	Refer to: r0460, r0461, r0462, r0463, r0464		
Notice:	An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.		
Note:	The individual characters of the identification number/serial number are available coded as ASCII characters.		
r0466[0...27]	Encoder 2 identification number/serial number / Enc2 ID_no/Ser_no		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the identification/serial number of encoder 2. Index 0 = first character of the identification number ... Index x = 20 hex (blank) --> separation between the identification number of serial number Index x + 1 = 2F hex (slash) --> separation between the identification number of serial number Index x + 2 = 20 hex (blank) --> separation between the identification number of serial number Index x + 3 = first character of the serial number ... Index y with contents = last character of the serial number		
Dependency:	Refer to: r0460, r0461, r0462, r0463, r0464		
Notice:	An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.		
Note:	The individual characters of the identification number/serial number are available coded as ASCII characters.		

r0467[0...27]	Encoder 3 identification number/serial number / Enc3 ID_no/Ser_no		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	<p>Displays the identification/serial number of encoder 3. Index 0 = first character of the identification number ... Index x = 20 hex (blank) --> separation between the identification number of serial number Index x + 1 = 2F hex (slash) --> separation between the identification number of serial number Index x + 2 = 20 hex (blank) --> separation between the identification number of serial number Index x + 3 = first character of the serial number ... Index y with contents = last character of the serial number</p>		
Dependency:	Refer to: r0460, r0461, r0462, r0463, r0464		
Notice:	An ASCII table (excerpt) can be found, for example, in the appendix to the List Manual.		
Note:	The individual characters of the identification number/serial number are available coded as ASCII characters.		
r0469[0...2]	Absolute encoder linear measuring step / Enc lin meas step		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [nm]	- [nm]	- [nm]
Description:	Displays the resolution of the absolute position for a linear absolute encoder.		
Index:	<p>[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3</p>		
Dependency:	Refer to: p0422, p9514		
r0469	Absolute encoder linear measuring step / Enc lin meas step		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [nm]	- [nm]	- [nm]
Description:	Displays the resolution of the absolute position for a linear absolute encoder.		
Dependency:	Refer to: p0422, p9514		

r0470[0...2]		Redundant coarse position value valid bits / Valid bits	
VECTOR_G	Can be changed: - Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the valid bits of the redundant coarse position value.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p9323, p9523		
r0470		Redundant coarse position value valid bits / Valid bits	
ENC	Can be changed: - Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the valid bits of the redundant coarse position value.		
Dependency:	Refer to: p9323, p9523		
r0471[0...2]		Redundant coarse position value fine resolution bits / Fine bit	
VECTOR_G	Can be changed: - Data type: Integer16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of valid bits for the fine resolution of the redundant coarse position value.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p9324, p9524		
r0471		Redundant coarse position value fine resolution bits / Fine bit	
ENC	Can be changed: - Data type: Integer16 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of valid bits for the fine resolution of the redundant coarse position value.		
Dependency:	Refer to: p9324, p9524		

r0472[0...2]	Redundant coarse position value relevant bits / Relevant bits		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of relevant bits for the redundant coarse position value.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		

r0472	Redundant coarse position value relevant bits / Relevant bits		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of relevant bits for the redundant coarse position value.		

r0473[0...2]	Non safety-relevant measuring steps position value pos1 / nsrPos1		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the non safety-relevant measuring steps of POS1.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0416, p9513		

r0473	Non safety-relevant measuring steps position value pos1 / nsrPos1		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the non safety-relevant measuring steps of POS1.		
Dependency:	Refer to: p0416, p9513		

r0474[0...2]		Redundant coarse position value configuration / Red pos config			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the encoder configuration for the redundant coarse position value.				
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Incrementer	Yes	No	-
	01	Encoder CRC least significant byte first	Yes	No	-
	02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
	04	Binary comparison not possible	Yes	No	-
	05	Single-channel encoder	Yes	No	-
Dependency:	Refer to: p9315, p9515				

r0474		Redundant coarse position value configuration / Red pos config			
ENC	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the encoder configuration for the redundant coarse position value.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Incrementer	Yes	No	-
	01	Encoder CRC least significant byte first	Yes	No	-
	02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
	04	Binary comparison not possible	Yes	No	-
	05	Single-channel encoder	Yes	No	-
Dependency:	Refer to: p9315, p9515				

r0475[0...2]		Gx_XIST1 coarse position safety most significant bit / Gx_XIST1 safe MSB		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Encoder	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.			
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3			
Note:	MSB: Most Significant Bit			

2 Parameters

2.2 List of parameters

r0475	Gx_XIST1 coarse position safety most significant bit / Gx_XIST1 safe MSB		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.		
Note:	MSB: Most Significant Bit		
r0477[0...2]	CO: Measuring gear position difference / Meas gear pos diff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position difference before the measuring gear between switching off and switching on.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: F31501, F32501, F33501		
Note:	The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.		
r0477	CO: Measuring gear position difference / Meas gear pos diff		
ENC	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position difference before the measuring gear between switching off and switching on.		
Dependency:	Refer to: F31501, F32501, F33501		
Note:	The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.		
r0479[0...2]	CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics. In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		

Caution:

Following ramping-up or after a data set changeover, the new value is present at connector inputs which are interconnected to connector output r0479 and under certain circumstances take 100 ms to become available.

Reason:

These interconnections are updated in the background, unlike interconnections involving other connector outputs (e.g. CO: r0482).

The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).

Description:

Sets the signal source for the encoder control word Gn_STW according to PROFIdrive.

Note:

When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established:

CI: p0480[0] = r2520[0], CI: p0480[1] = r2520[1] and CI: p0480[2] = r2520[2]

r0481[0...2]	CO: Encoder status word Gn_ZSW / Enc Gn_ZSW				
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 4010, 4704, 4730, 4750		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the encoder status word Gn_ZSW according to PROFIdrive.				
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Function 1 active	Yes	No	-
	01	Function 2 active	Yes	No	-
	02	Function 3 active	Yes	No	-
	03	Function 4 active	Yes	No	-
	04	Value 1	Displayed in r0483	Not present	-
	05	Value 2	Displayed in r0483	Not present	-
	06	Value 3	Displayed in r0483	Not present	-
	07	Value 4	Displayed in r0483	Not present	-
	08	Measuring probe 1 deflected	Yes	No	-
	09	Measuring probe 2 deflected	Yes	No	-
	11	Encoder fault acknowledge active	Yes	No	9676
	13	Absolute value cyclically	Displayed in r0483	No	-
	14	Parking encoder active	Yes	No	-
	15	Encoder fault	Displayed in r0483	None	-
Notice:	Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature: SINAMICS S120 Function Manual Drive Functions				
Note:	For bit 14: Displays the acknowledgment for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid. For bit 14, 15: r0481.14 = 1 and r0481.15 = 0 can have one of the following causes: - the encoder is parked. - the encoder is deactivated. - the encoder is being commissioned. - no parameterized encoder available. - encoder data set is being changed over. r0481.14 = 1 and r0481.15 = 1 has the following significance: An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.				

r0481	CO: Encoder status word Gn_ZSW / Enc Gn_ZSW				
ENC	Can be changed: -	Calculated: -	Access level: 3

15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: For bit 14:
Displays the acknowledgment for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid.
For bit 14, 15:
r0481.14 = 1 and r0481.15 = 0 can have one of the following causes:
- the encoder is parked.
- the encoder is deactivated.
- the encoder is being commissioned.
- no parameterized encoder available.
- encoder data set is being changed over.
r0481.14 = 1 and r0481.15 = 1 has the following significance:
An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

r0482[0...2]**CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1**

VECTOR_G

Can be changed: -	Calculated: -	Access level: 3
Data type: Unsigned32	Dyn. index: -	Func. diagram: 4700, 4702, 4704, 4735, 4740, 4750
P-Group: Encoder	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	-

Description: Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note:

- this value is reset if necessary when the "parking encoder" (r0481.14) function is deselected.
- in this value, the measuring gear (p0432, p0433) is only taken into account when the position tracking is activated (p0411.0 = 1).
- the update time for the position control (EPOS) corresponds to the position controller clock cycle (p0115[4]).
- the update time in isochronous operation corresponds to the bus cycle time r2064[1].
- the update time in isochronous operation and with position control (EPOS) corresponds to the position controller sampling time (p0115[4]).
- the update time in non-isochronous operation or without position control (EPOS) must be determined from the default bus cycle time and the minimum cycle time:
The default bus cycle time is the lowest common multiple (LCM) of all current controller sampling times (p0115[0]) in the drive group (infeed + drives).
The minimum cycle time is four times the maximum of all current controller sampling times (p0115[0]) in the drive group (infeed + drives).
If the minimum cycle time is greater than the default bus cycle time, then the update time corresponds to the minimum cycle time; otherwise, the update time corresponds to the default bus cycle time.
The minimum update time is 1 ms.
Example 1: infeed, servo
Default bus cycle time = $\text{KGV}(250 \mu\text{s}, 125 \mu\text{s}) = 250 \mu\text{s}$
Minimum cycle time = $4 * \text{MAX}(250 \mu\text{s}, 125 \mu\text{s}) = 4 * 250 \mu\text{s} = 1 \text{ ms}$
-> update time = 1 ms

2 Parameters

2.2 List of parameters

Example 2: infeed, servo, vector

Default bus cycle time = $\text{KGV}(250 \mu\text{s}, 125 \mu\text{s}, 400 \mu\text{s}) = 2 \text{ ms}$

Minimum cycle time = $4 * \text{MAX}(250 \mu\text{s}, 125 \mu\text{s}, 400 \mu\text{s}) = 4 * 400 \mu\text{s} = 1.6 \text{ ms}$

-> update time = 2 ms

	14	Request parking encoder	Yes	No	-
	15	Request acknowledge encoder fault	Yes	No	-

Notice: Information on Gn_STW/Gn_ZSW should be taken from the corresponding product documentation.

Note: The signal source for the encoder control word is set with p0480.

p0488[0...2] Measuring probe 1 input terminal / Meas probe 1 inp

VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4740
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0

Description: Sets the input terminal to connect probe 1.

Value:

0:	No measuring probe
1:	DI/DO 9 (X122.10/X121.8)
2:	DI/DO 10 (X122.12/X121.10)
3:	DI/DO 11 (X122.13/X121.11)
4:	DI/DO 13 (X132.10/X131.2)
5:	DI/DO 14 (X132.12/X131.4)
6:	DI/DO 15 (X132.13/X131.5)
7:	DI/DO 8 (X122.9/X121.7)
8:	DI/DO 12 (X132.9/X131.1)

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p0489, p0728

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: Regarding the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

Dependency:	Refer to: p0488, p0728		
Caution:	In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.		
			

2 Parameters

2.2 List of parameters

- Notice:** Regarding the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
- Note:** DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0489

Measuring probe 2 input terminal / Meas probe 2 inp

ENC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4740
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0

Description: Sets the input terminal to connect probe 2.

- Value:**
- 0: No measuring probe
 - 1: DI/DO 9 (X122.10/X121.8)
 - 2: DI/DO 10 (X122.12/X121.10)
 - 3: DI/DO 11 (X122.13/X121.11)
 - 4: DI/DO 13 (X132.10/X131.2)
 - 5: DI/DO 14 (X132.12/X131.4)
 - 6: DI/DO 15 (X132.13/X131.5)
 - 7: DI/DO 8 (X122.9/X121.7)
 - 8: DI/DO 12 (X132.9/X131.1)

Dependency: Refer to: p0488, p0728

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

- Notice:** Regarding the terminal designation:
The first designation is valid for CU320, the second for CU310.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
- Note:** DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0491

Motor encoder fault response ENCODER / Fault resp ENCODER

VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).

This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

- Value:**
- 0: Encoder fault results in OFF2
 - 1: Enc fault results in encoderless oper. and oper. continues
 - 2: Encoder fault results in encoderless operation and OFF1
 - 3: Encoder fault results in encoderless operation and OFF3
 - 4: Encoder fault results in an armature short-cct int/DC braking
 - 5: Enc fault results in encoderless op, operation continues, alarm
 - 6: An encoder fault results in encoderless operation, alarm

- Dependency:** The following parameters are relevant for encoderless operation.
Refer to: p0341, p0342, p1470, p1472, p1517, p1612, p1755
Refer to: F07575
- Caution:**  For a value = 1, 2, 3, 5, 6 the following applies:
- encoderless operation must have been started.
For a value = 1, 5, 6 the following applies:
- the motor continues to operate in spite of the incorrect motor encoder function.
- Note:** For a value = 1, 2, 3, 5, 6 the following applies:
- Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).
- if, with r1407.13 = 1, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop or closed-loop control type p1300 of this data set must match that of the original data set (e.g. p1300 = 21). Encoderless closed-loop controlled operation is kept when changing over.
- For a value = 4, the following applies:
- the value can only be set for all motor data sets when p1231 = 3, 4.
- for permanent magnet synchronous motors, an armature short circuit is initiated when an encoder fault occurs.
- For induction motors, DC braking is initiated on an encoder fault. DC braking must be commissioned (p1232, p1233, p1234).
For a value = 5, the following applies:
Same function as for value = 1.
However, in operation, encoder malfunctions that occur are only output as alarm and the message bit "Fault active" (r2139.3) is not set. Fault F7575 is set after the drive axis has been shut down.
The active malfunction of the encoder must be acknowledged via the encoder interface before the system can be switched on again.
For a value = 6, the following applies:
Same function as for value = 1.
Encoder malfunctions that occur are only output as alarm and the message bit "Fault active" (r2139.3) is not set. After shutting down the drive axis, in spite of an active encoder malfunction, the drive can restart without switching over to encoderless operation - except if a topology alarm is involved. The active encoder malfunction must be acknowledged via the encoder interface before operation with encoder can be switched on again.

p0492	Maximum speed difference per sampling cycle / n_dif max/samp_cyc		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the maximum permissible speed difference within the current controller sampling time.

Dependency: Refer to: r1408
Refer to: F07902, F31118, A31418, F32118, A32418, F33118, A33418

Note: For a value of 0.0, the speed change monitoring is disabled.
The following applies for square-wave encoders:
If the speed difference exceeds the threshold value p0492, depending on p0491, either encoderless closed-loop speed/torque control is selected or the drive is switched off with fault F3x118.
The following applies for other speed encoders:
If the speed difference exceeds threshold value p0492, in order to avoid subsequent faults, the old speed actual value is kept and after time p2178 shut down with fault F07902 (motor stalled).

p0492 Square-wave encoder maximum speed difference per sampling cycle / n_dif max/samp_cyc			
ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_REG Dyn. index: - Unit group: - Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the maximum permissible speed difference within the current controller sampling time for squarewave encoders.		
Dependency:	Refer to: F31118, A31418		
Note:	For a value of 0.0, the speed change monitoring is disabled. if the set maximum speed difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.		

p0492 Square-wave encoder max. velocity difference per sampling cycle / v_dif max/samp_cyc			
ENC (Lin_enc)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [m/min]	Calculated: CALC_MOD_REG Dyn. index: - Unit group: - Scaling: - Max 1000.00 [m/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [m/min]
Description:	Sets the maximum permissible velocity difference within the current controller sampling time for square-wave encoders.		
Dependency:	Refer to: F31118, A31418		
Note:	For a value of 0.0, velocity change monitoring is disabled. if the set maximum velocity difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.		

p0493[0...n] Zero mark selection input terminal / ZM_sel inp_term			
VECTOR_G	Can be changed: U, T Data type: Integer16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: EDS, p0140 Unit group: - Scaling: - Max 8	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the input terminal for selecting the reference mark via BERO/switching signal when performing referencing with several zero marks. The encoder interface supplies the position of the reference mark, which was detected immediately after the positive edge of the BERO signal.		
Value:	0: No selection via BERO 1: DI/DO 9 (X122.10/X121.8) 2: DI/DO 10 (X122.12/X121.10) 3: DI/DO 11 (X122.13/X121.11) 4: DI/DO 13 (X132.10/X131.2) 5: DI/DO 14 (X132.12/X131.4) 6: DI/DO 15 (X132.13/X131.5) 7: DI/DO 8 (X122.9/X121.7) 8: DI/DO 12 (X132.9/X131.1)		

Caution:

In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
Regarding the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input (p0728).

For p0493 = 0 (factory setting) the following applies:

- there is no logic operation between the reference mark search and an input signal.

For p0493 > 0, the following applies:

- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.

- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

p0493 Zero mark selection input terminal / ZM_sel inp_term

ENC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	211	0

Description: Sets the input terminal for selecting the reference mark via BERO/switching signal when performing referencing with several zero marks.

The encoder interface supplies the position of the reference mark, which was detected immediately after the positive edge of the BERO signal.

Value:

- 0: No selection via BERO
- 1: DI/DO 9 (X122.10/X121.8)
- 2: DI/DO 10 (X122.12/X121.10)
- 3: DI/DO 11 (X122.13/X121.11)
- 4: DI/DO 13 (X132.10/X131.2)
- 5: DI/DO 14 (X132.12/X131.4)
- 6: DI/DO 15 (X132.13/X131.5)
- 7: DI/DO 8 (X122.9/X121.7)
- 8: DI/DO 12 (X132.9/X131.1)
- 210: DI 0 (X130 / 1.2)
- 211: DI 1 (X130 / 1.5)

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
Regarding the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input (p0728).

For p0493 = 0 (factory setting) the following applies:

- there is no logic operation between the reference mark search and an input signal.

For p0493 > 0, the following applies:

- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.

- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

p0494[0...n]	Equivalent zero mark input terminal / ZM_equiv inp_term		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:

- 0: No equivalent zero mark (evaluation of the encoder zero mark)
- 1: DI/DO 9 (X122.10/X121.8)
- 2: DI/DO 10 (X122.12/X121.10)
- 3: DI/DO 11 (X122.13/X121.11)
- 4: DI/DO 13 (X132.10/X131.2)
- 5: DI/DO 14 (X132.12/X131.4)
- 6: DI/DO 15 (X132.13/X131.5)
- 7: DI/DO 8 (X122.9/X121.7)
- 8: DI/DO 12 (X132.9/X131.1)

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual). For p0494 = 0 (factory setting), the setting in p0495 is effective.

Regarding the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input.

p0495[0...2]	Equivalent zero mark input terminal / ZM_equiv input		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4735
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:

- 0: No equivalent zero mark (evaluation of the encoder zero mark)
- 1: DI/DO 9 (X122.10/X121.8)
- 2: DI/DO 10 (X122.12/X121.10)
- 3: DI/DO 11 (X122.13/X121.11)
- 4: DI/DO 13 (X132.10/X131.2)
- 5: DI/DO 14 (X132.12/X131.4)
- 6: DI/DO 15 (X132.13/X131.5)
- 7: DI/DO 8 (X122.9/X121.7)
- 8: DI/DO 12 (X132.9/X131.1)

Index:

- [0] = Encoder 1
- [1] = Encoder 2
- [2] = Encoder 3

Dependency: Refer to: p0494

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual). For p0494 > 0, the setting in p0494 is effective and p0495 is invalid.

Regarding the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.
 The terminal must be set as input.
 For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.
 For p0495 > 0, the following applies:
 Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.
 - increasing position actual values (r0482) --> the 0/1 edge is evaluated.
 - decreasing position actual values (r0482) --> the 1/0 edge is evaluated.
 Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in a fault message in Gn_ZSW.
 The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.
 An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark.
 Exception:
 Simultaneous use as measuring probe and equivalent zero mark is possible for the same encoder, as both functions cannot be simultaneously requested.

p0495	Equivalent zero mark input terminal / ZM_equiv input		
ENC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4735
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:

- 0: No equivalent zero mark (evaluation of the encoder zero mark)
- 1: DI/DO 9 (X122.10/X121.8)
- 2: DI/DO 10 (X122.12/X121.10)
- 3: DI/DO 11 (X122.13/X121.11)
- 4: DI/DO 13 (X132.10/X131.2)
- 5: DI/DO 14 (X132.12/X131.4)
- 6: DI/DO 15 (X132.13/X131.5)
- 7: DI/DO 8 (X122.9/X121.7)
- 8: DI/DO 12 (X132.9/X131.1)

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
 For p0494 > 0, the setting in p0494 is effective and p0495 is invalid.
 Regarding the terminal designation:

The first designation is valid for CU320, the second for CU310.

Note: Refer to the encoder interface for PROFIdrive.
 The terminal must be set as input.
 For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.
 For p0495 > 0, the following applies:
 Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.
 - increasing position actual values (r0482) --> the 0/1 edge is evaluated.
 - decreasing position actual values (r0482) --> the 1/0 edge is evaluated.
 Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in a fault message in Gn_ZSW.
 The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.
 An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark.
 Exception:
 Simultaneous use as measuring probe and equivalent zero mark is possible for the same encoder, as both functions cannot be simultaneously requested.

p0500	Technology application / Tec application		
VECTOR_G	Can be changed: C2(1), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	1
Description:	Sets the technology application. The parameter influences the calculation of open-loop and closed-loop control parameters that is initiated using p0578, for example.		
Value:	0: Standard drive (VECTOR) 1: Pumps and fans 2: Sensorless closed-loop control down to f = 0 (passive loads) 4: Dynamic in the field weakening range 5: Starting with a high break loose torque 6: High load moment of inertia		
Dependency:	Refer to: p2175, p2177		

Note:

The calculation of parameters dependent on the technology application can be called up as follows:

- when exiting quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5 (for p0500 = 6: p0340 = 1, 3, 4)
- when writing p0578 = 1

For p0500 = 0 and when the calculation is initiated, the following parameters are set:

- p1574 = 10 V (separately excited synchronous motor: 20 V)
- p1750.2 = 0
- p1802 = 4 (SVM/FLB without overcontrol)
- p1803 = 106 %
- p1610 = 50 %
- p1611 = 30 %
- p1310 = 50 %
- p1311 = 0 %
- p1381 = 0 %

For p0500 = 1 and when the calculation is initiated, the following parameters are set:

- p1574 = 2 V (separately excited synchronous motor: 4 V)
- p1750.2 = 0
- p1802 = 9 (edge modulation), if r0192.0 = 1
- p1802 = 4, if r0192.0 = 0
- p1803 = 106 %

- p1310, p1311, p1381, p1611, p1610 the same as for p0500 = 0

For p0500 = 2 and when the calculation is initiated, the following parameters are set:

- p1574 = 2 V (separately excited synchronous motor: 4 V)
- p1750.2 = 1: Encoderless control of the induction motor is effective down to zero frequency.

This operating mode is possible for passive loads. These include applications where the load does not generate regenerative torque when breaking away and the motor comes to a standstill (zero speed) itself when the pulses are inhibited.

- p1802, p1803, p1310, p1311, p1381, p1610, p1611 the same as for p0500 = 0

The setting of p1750 is only relevant for induction motors.

p1802 and p1803 are only changed, in all cases, if a sine-wave output filter (p0230 = 3, 4) has not been selected.

For p0500 = 4: (presetting for VECTOR with PM250 power unit)

- p1574 = 30 V
- p1750.2 = 0
- p1802 = 2 (SVM with overcontrol)
- p1803 = 106 %
- p1381 = 6 % (to avoid overcontrol)
- p1654 = p0115[1]
- p1402.11 = 1
- p1310, p1311, p1610, p1611 the same as for p0500 = 0

For p0500 = 5: (for speed-controlled starting for vector control without encoder)

- p1574, p1750.2, p1802, p1803, p1381 the same as for p0500 = 0
- p1610 = 80 % (separately excited synchronous motor: 50 %)
- p1611 = 80 % (separately excited synchronous motor: 50 %)
- p1310 minimum 80%
- p1311 at least 30 %

For p0500 = 6: (for high moments of inertia with/without gearbox coupling)

- p1574, p1750.2, p1802, p1803, p1610, p1611, p1310, p1311 the same as for p0500 = 0

The following settings change the speed control for p0340 = 1, 3, 4

They are only reset using p0340 = 1 or p3900 > 0.

- p0342 = 10 (motor moment of inertia factor, if previously p0342 = 1)

The real factor can be entered in the commissioning tool.

- p1400.20 = 1 (acceleration model)
- p1441, p1442, p1452 calculated
- p1496 = 100 %

2 Parameters

2.2 List of parameters

- p1959.14 = 1 (speed actual value smoothing is calculated)

- p1967 = 80 %

The following settings are only reset again using p3900 = 1.

- p1115 = 1

- p1130, p1131 ramp-function generator rounding calculated from p1120, p1121 and r0345.

The moment of inertia estimator (p1400.18, p5310) can be activated, depending on the specific application, to adaptively determine the load moment of inertia in operation.

p0505		Selecting the system of units / Unit sys select		
VECTOR_G, B_INF, ENC	Can be changed: C2(5)	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Applications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	1	4	1	
Description:	Sets the actual system of units.			
Value:	1: SI system of units 2: System of units referred/SI 3: US system of units 4: System of units referred/US			
Dependency:	The parameter can only be changed in an offline project using the commissioning tool.			
Caution:	If a per unit representation is selected and if the reference parameters (e.g. p2000) are subsequently changed, then the physical significance of several control parameters is also adapted at the same time. As a consequence, the control behavior can change (see p1576, p1621, p1744, p1752, p1755 and p1609, p1612, p1619, p1620).			
				
Note:	Reference parameter for the unit system % are, for example, p2000 ... p2004. Depending on what has been selected, these are displayed using either SI or US units.			

p0514[0...9]		Scaling-specific reference values / Scal spec ref val		
VECTOR_G, B_INF	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000001	10000000.000000	1.000000	
Description:	Sets the reference values for the specific scaling of BICO parameters. The specific scaling is active when interconnecting with other BICO parameters, and can be used in the following cases: 1. Parameter with the marking "Scaling: p0514". 2. Changing the standard scaling for parameters with the marking "Scaling: p2000" ... "Scaling: p2007". Relative values refer to the corresponding reference value. The reference value corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). To specifically scale BICO parameters, proceed as follows: - set the reference value (p0514[0...9]). - set the numbers of the parameters, which should be active for the scaling, corresponding to the index of p0514 (p0515[0...19] ... p0524[0...19]). For parameters with the marking "Scaling: p0514", which are not entered in p0515[0...19] to p0524[0...19], the reference value 1.0 (factory setting) applies.			
Index:	[0] = Parameters in p0515[0...19] [1] = Parameters in p0516[0...19] [2] = Parameters in p0517[0...19] [3] = Parameters in p0518[0...19] [4] = Parameters in p0519[0...19] [5] = Parameters in p0520[0...19] [6] = Parameters in p0521[0...19] [7] = Parameters in p0522[0...19] [8] = Parameters in p0523[0...19] [9] = Parameters in p0524[0...19]			

Dependency: Refer to: p0515, p0516, p0517, p0518, p0519, p0520, p0521, p0522, p0523, p0524
Notice: This parameter is only changed if a warm restart or save with subsequent power off/on is carried out.

	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the system of units for the controller gains.		
Value:	0: Representation physical/% (p0505) 1: Representation no dimensions (referred)		
Note:	The parameter is pre-assigned a value of 0 and cannot be changed.		

p0530[0...n]	Bearing version selection / Bearing vers sel		
VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: SESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	104	0
Description:	Sets the bearing version. Corresponding to the bearing version entered, its code number (p0531) is automatically set. 0 = No data 1 = Manual entry 101 = STANDARD		

102 = PERFORMANCE
 103 = HIGH PERFORMANCE
 104 = ADVANCED LIFETIME

Dependency: Refer to: p0301, p0531, p0532, p1082

Notice: For p0530 = 101, 102, 103, 104, the maximum bearing speed (p0532) is write protected. Write protection is withdrawn with p0530 = 1.

If p0530 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.

Note: For a motor with DRIVE-CLiQ, p0530 can only be set to 1.

p0531[0...n] Bearing code number selection / Bearing codeNo sel

VECTOR_G	Can be changed: C2(3)	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0

Description: Display and setting the code number of the bearing.

When setting p0301 and p0530 the code number is automatically pre-assigned and is write protected. The information in p0530 should be observed when removing write protection.

Dependency: Refer to: p0301, p0530, p0532, p1082

Notice: If p0531 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.

Note: p0531 cannot be changed on a motor with DRIVE-CLiQ.

p0532[0...n] Bearing maximum speed / Bearing n_max

VECTOR_G	Can be changed: C2(1, 3)	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum speed of the bearing.

The following applies when calculating the maximum speed (p1082):

- for p0324 = 0 or p0532 = 0, p0322 is used.

- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.

Dependency: Refer to: p0301, p0322, p0324, p0530, p1082

Notice: This parameter is pre-assigned in the case of motors from the motor list (p0301) if a bearing version (p0530) is selected.

When selecting a catalog motor, this parameter cannot be changed (write protection). The information in p0530 should be observed when removing write protection.

If p0532 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).

r0565[0...15]	CO: Probe time stamp / Probe t_stamp		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the time stamp MT_ZS_1 up to MT_ZS_16. Displays the measuring time for an edge at the digital input for the "central measuring probe evaluation stage 3" function. The measuring time is specified as 16-bit value with a resolution of 0.25 µs. Priority: MT1 ... MT8, oldest ... newest time stamp		
r0566[0...3]	CO: Probe time stamp reference / Probe t_stamp name		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the time stamp reference MT_ZSB1 up to MT_ZSB4.		
r0567	CO: Probe diagnostics word / Probe diag_word		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for diagnostics word MT_DIAG.		
p0570	Inhibit list values effective number / Inhib list no		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	50	0
Description:	Sets the number of parameters in the inhibit list p0571. This number of parameters can be automatically excluded from the calculation of the motor and control parameters (see p0340, p0578), starting from index 0.		
Note:	Defines the number of entries in p0571 that should be taken into account. The inhibit list is deactivated for a value of 0.		

p0571[0...49]	Inhibit list motor/closed-loop control parameter calculation / Inhib list calc		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2142	0
Description:	The inhibit list contains parameters that should be withdrawn from the automatic motor and closed-loop control parameter calculation (p0340, p0578).		
Value:	0: No parameter 600: Motor temperature sensor 640: Current limit 1082: Maximum speed 1460: Speed controller P gain 1462: Speed controller integral time 1470: Speed controller P gain encoderless 1472: Speed controller integral time encoderless 1520: Torque limit upper/motoring 1521: Torque limit lower/regenerative 1530: Power limit motoring 1531: Power limit regenerative 1590: Flux controller P gain 1592: Flux controller integral time 2141: Speed threshold 1 2142: Hysteresis speed 1		
Note:	Parameter p0570 defines the number of entries (starting at index 0) in the inhibit list. p0572 can be used to define for which drive data sets the inhibit list should apply. If a motor data set is entered into a parameter number, then this is not overwritten as soon as only one drive data set refers to the motor data set (p0186).		
p0572[0...n]	Activate/deactivate inhibit list / Inh_list act/deact		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting for activating/deactivating the inhibit list. Depending on the setting, the parameters of the inhibit list (p0571) should be overwritten when calculating the motor and closed-loop control parameters for the particular drive data set (DDS).		
Value:	0: No 1: Yes		
Note:	If value = 0: The automatic calculation (p0340, p0578) also overwrites the parameters of the inhibit list (p0571). If value = 1: The automatic calculation (p0340, p0578) does not overwrite the parameters of the inhibit list (p0571).		
p0573	Inhibit automatic reference value calculation / Inhibit calc		
VECTOR_G, B_INF	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to inhibit the calculation of reference parameters (e.g. p2000) when automatically calculating the motor and closed-loop control parameters (p0340, p3900).		

2 Parameters

2.2 List of parameters

Value:	0: No 1: Yes
Notice:	The inhibit for the reference value calculation is canceled when new motor parameters (e.g. p0305) are entered and only one drive data set exists (p0180 = 1). This is the case during initial commissioning. Once the motor and control parameters have been calculated (p0340, p3900), the inhibit for the reference value calculation is automatically re-activated.
Note:	If value = 0: The automatic calculation (p0340, p3900) overwrites the reference parameters. If value = 1: The automatic calculation (p0340, p3900) does not overwrite the reference parameters.

p0578[0...n]

Calculate technology-dependent parameters / Calc tec par

VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: This parameter is used to calculate all parameters that depend on the technology of the application (p0500). All of the parameters are calculated that can also be determined using p0340 = 5.

Value: 0: No calculation
1: Complete calculation

Note: At the end of the calculations, p0578 is automatically set to 0.

p0595

Technological unit selection / Tech unit select

VECTOR_G (Tech_ctrl)	Can be changed: C2(5)	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Applications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	32	1

Description: Selects the units for the parameters of the technology controller.
For p0595 = 1, 2, the reference variable set in p0596 is not active.

Value:

- 1: %
- 2: 1 referred no dimensions
- 3: bar
- 4: °C
- 5: Pa
- 6: ltr/s
- 7: m³/s
- 8: ltr/min
- 9: m³/min
- 10: ltr/h
- 11: m³/h
- 12: kg/s
- 13: kg/min
- 14: kg/h
- 15: t/min
- 16: t/h
- 17: N
- 18: kN
- 19: Nm
- 20: psi
- 21: °F
- 22: gallon/s
- 23: inch³/s
- 24: gallon/min
- 25: inch³/min
- 26: gallon/h

27: inch³/h
 28: lb/s
 29: lb/min
 30: lb/h
 31: lbf
 32: lbf ft

Dependency: Only the unit of the technology controller parameters are switched over (unit group 9_1).

Refer to: p0596

Note: When switching over from % into another unit, the following sequence applies:

- set p0596
 - set p0595 to the required unit

p0596

Technological unit reference quantity / Tech unit ref qty

VECTOR_G

P-Group: Motor

Unit group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

0

21

0

Description: Sets the sensor to monitor the motor temperature.

The sensor type used is set in p0601.

Value:

0: No sensor
 1: Temperature sensor via encoder 1
 2: Temperature sensor via encoder 2
 3: Temperature sensor via encoder 3
 10: Temperature sensor via a BICO interconnection
 11: Temperature sensor via Motor Module / CU terminals
 20: Temperature sensor via a BICO interconnection p0608
 21: Temperature sensor via a BICO interconnection p0609

Dependency: Refer to: r0458, p0601, p0603

Caution:

If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another sensor, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.

Notice:

The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0.

For operation with a braking resistor (p1300 = 15), p0600 = 11 is automatically set when commissioning.

Note:

For p0600 = 0:

With induction motors, the motor temperature is calculated using the motor temperature model (see also p0612.1).

For p0600 = 1, 2, 3:

Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported.

For p0600 = 10:

The BICO interconnection should be executed via connector input p0603.

For p0600 = 11:

For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210).

For p0600 = 20, 21:

The BICO interconnection should be executed via connector input p0608 or p0609.

Associated parameters: p0601, p4600 ... p4603, p4610 ... p4613

p0601[0...n]	Motor temperature sensor type / Mot_temp_sens type		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	11	2
Description:	Sets the sensor type for the motor temperature monitoring.		
Value:	0: No sensor 1: PTC alarm & timer 2: KTY84 3: KTY84 and PTC (only for motors with DRIVE-CLiQ): 4: Bimetallic NC contact alarm & timer (only for temp_eval via MM) 5: PT100 6: PT1000 7: PT1000 and PTC (only for motors with DRIVE-CLiQ): 10: Evaluation via several temperature channels SME12x 11: Evaluation via several temperature channels BICO		
Dependency:	A thermal motor model is calculated corresponding to p0612.		
	Refer to: r0458, p0600, p0612		
Note:	The temperature sensor for the temperature evaluation is set in p0600. For p0600 = 10 (temperature sensor via a BICO interconnection), the setting in p0601 has no significance. Information on using temperature sensors is provided in the following literature: - hardware description of the appropriate components - SINAMICS S120 Commissioning Manual For p0601 = 1: Tripping resistance = 1650 Ohm. After the tripping resistance has been exceeded, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output. For p0601 = 3, 7: For motors with DRIVE-CLiQ and two temperature sensors, the value is automatically set. For p0601 = 4: Tripping resistance = 100 Ohm. After tripping, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output. For p0601 = 5: It is only possible to evaluate a PT100 for p0600 = 11 and r0192.15 = 1. For p0601 = 10: Not permitted for p0600 = 0, 10, 11. Associated parameters: p4600 ... p4603 (can be switched via EDS) For r0458.8 = 1, a temperature evaluation is supported through several temperature channels. Examples: When evaluating using SME120 or SME125, 4 temperature channels are available (parameterized using p4600, p4601, p4602, p4603). When evaluating using CU310 and CUA32, 2 temperature channels are available (encoder interface: parameterization via p4600, terminal block: parameterization via p4601). For p0601 = 11: Not permitted for p0600 = 0, 10, 11. Associated parameters: p4610 ... p4613 (can be switched via MDS)		

p0601	Temperature sensor, sensor type / Temp_sens type		
B_INF	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the sensor type for the temperature measurement at input X21 (booksize) or X41 (chassis). The measured value is displayed in r0035.		
Value:	0: No sensor 1: PTC alarm & timer 2: KTY84 4: Bimetallic NC contact alarm & timer 6: PT1000		
Dependency:	Refer to: r0035		
Note:	The measured value display depends on the selected sensor type. For p0601 = 0: --> r0035 = -200 °C For p0601 = 1: Tripping resistance = 1650 Ohm (lower resistance --> r0035 = -50 °C, higher resistance --> r0035 = 250 °C). For p0601 = 2, 6: Displays the temperature in °C. For p0601 = 4: r0035 = -50 °C --> The tripping resistance is less than 100 Ohm (bimetallic NC contact is closed or has a short-circuit). r0035 = 250 °C --> The tripping resistance is greater than 100 Ohm (bimetallic NC contact is open, not connected or has a wire breakage). When using the following components, a value of 4 is set as the factory setting and can no longer be changed: - Basic Line Module (BLM) with internal Braking Module. - Active Line Module (ALM) with line filter Active Interface Module (AIM, p0220[0] = 41 ... 45). In these cases, in addition to the temperature display, the temperature is also monitored.		
p0602	Par_connection power unit number, temperature sensor / PU_no temp_sensor		
VECTOR_G (Parallel)	Can be changed: U, T	Calculated: -	Access level: 2

	Min	Max	Factory setting
	0	10	0
Description:	Sets the power unit number to which the temperature sensor is connected. The value corresponds to the Power unit Data Set number (PDS) of the power unit. The number of power unit data sets is defined in p0120.		
p0603	CI: Motor temperature signal source / Mot temp S_src		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to evaluate the motor temperature via a BICO interconnection.		
Dependency:	Refer to: p0600		

2 Parameters

2.2 List of parameters

Note: Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C.
PTC temperature sensor:
For a value = -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC.
For a value = 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC.
Note:
When using a Terminal Module 31 (TM31), the following applies:
- the sensor type used is set using p4100.
- the temperature signal is interconnected using CO: r4105.

p0604[0...n]	Mot_temp_mod 2: sensor alarm threshold / Mod 2: sens A_thr		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°C]	200.0 [°C]	130.0 [°C]
Description:	Sets the alarm threshold for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000. After the alarm threshold is exceeded, alarm A07910 is output and timer (p0606) is started. If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.		
Dependency:	Refer to: p0606, p0612 Refer to: F07011, A07910		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	The hysteresis is 2 K. When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		

p0605[0...n]	Mot_temp_mod 1/2 sensor threshold and temperature value / Mod 1/2 sens thr_T		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016, 8017
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°C]	240.0 [°C]	145.0 [°C]
Description:	Sets the threshold and temperature value to monitor the motor temperature. Temperature model 1 (I2t, p0612.0 = 1): The following applies for firmware version < 4.7 SP6 or p0612.8 = 0: - sets the alarm threshold. If the model temperature (r0034) exceeds the alarm threshold, then alarm A07012 is output. - this value is simultaneously used as rated winding temperature. The following applies from firmware version 4.7 SP6 and p0612.8 = 1: - p5390: when commissioning a catalog motor for the first time, p0605 is copied to p5390. - p5390: p5390 is of significance when evaluating the alarm threshold. - p5390: the stator winding temperature (r0632) is used to initiate the signal. - p0627: when a catalog motor is commissioned for the first time, p0605 - 40 °C is copied to p0627. - p0627: p0627 is of significance for the rated temperature. Motor temperature model 2 (p0612.1 = 1) or measurement: - sets the fault threshold. If the temperature (r0035) exceeds the fault threshold, then fault F07011 is output.		
Dependency:	Refer to: r0034, p0606, p0611, p0612 Refer to: F07011, A07012		

- Notice:** When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
Motor temperature model 1 (I2t):
The following applies for firmware version < 4.7 SP6 or p0612.8 = 0:
p0605 also defines the final temperature of the model for r0034 = 100 %. Therefore, p0605 has no influence on the time up to alarm A07012 being issued. The time is only determined by time constant p0611, the actual current and the reference value p0318. For p0318 = 0, the rated motor current is used as reference value.
- Note:** The hysteresis is 2 K.
When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0606[0...n]	Mot_temp_mod 2: sensor timer / Mod 2:sens timer

	Min	Max	Factory setting
	0.000 [s]	600.000 [s]	0.000 [s]
Description:	Sets the timer for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000. This timer is started when the temperature alarm threshold (p0604) is exceeded. If the timer has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output. If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.		
Dependency:	Refer to: p0604, p0605 Refer to: F07011, A07910		
Note:	With p0606 = 0 s, the timer is deactivated and only the fault threshold is effective. KTY/PT1000: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded. PTC, bimetallic NC contact: The timer minimum value has no special significance.		

p0607[0...n]	Temperature sensor fault timer / Sensor fault time		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	600.000 [s]	0.100 [s]
Description:	Sets the timer between the output of alarm and fault for a temperature sensor fault. If there is a sensor fault, this timer is started. If the sensor fault is still present after the timer has expired, a corresponding fault is output.		
Notice:	The parameterized time is internally rounded-off to an integer multiple of 48 ms.		
Note:	If the motor is an induction motor, the timer is switched off when setting the minimum value and no alarm is output. Temperature monitoring is then based on the thermal model.		

p0608[0...3]	CI: Motor temperature signal source 2 / Mot_temp S_src 2		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets signal source 2 to evaluate the motor temperature via a BICO interconnection.		
Index:	[0] = Motor temperature channel 1 [1] = Motor temperature channel 2 [2] = Motor temperature channel 3 [3] = Motor temperature channel 4		
Dependency:	Refer to: p0600		
Note:	Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C. Temperature sensor PTC/bimetal: For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC (bimetal contact closed). For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC (bimetal contact open). Note: When using a Terminal Module 120 (TM120), the following applies: - the sensor type used is set using p4100. - the temperature signal is interconnected using connector output r4105.		

p0609[0...3]	CI: Motor temperature signal source 3 / Mot_temp S_src 3		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 8016
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets signal source 3 to evaluate the motor temperature via a BICO interconnection.		
Index:	[0] = Motor temperature channel 1 [1] = Motor temperature channel 2 [2] = Motor temperature channel 3 [3] = Motor temperature channel 4		
Dependency:	Refer to: p0600		
Note:	Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C. Temperature sensor PTC/bimetal: For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC (bimetal contact closed). For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC (bimetal contact open). Note: When using a Terminal Module 120 (TM120), the following applies: - the sensor type used is set using p4100. - the temperature signal is interconnected using connector output r4105.		

p0610[0...n]	Motor overtemperature response / Mot temp response		
VECTOR_G	Can be changed: T Data type: Integer16	Calculated: - Dyn. index: MDS, p0130	Access level: 2 Func. diagram: 8016, 8017, 8018, 8019
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0	Max 12	Factory setting 12
Description:	Sets the system response when the motor temperature reaches the alarm threshold.		
Value:	0: No response only alarm no reduction of I_max 1: Messages, reduction of I_max 2: Messages, no reduction of I_max 12: Messages, no reduction of I_max, temperature storage		
Dependency:	Refer to: p0601, p0604, p0605, p0614, p0615, p5390 Refer to: F07011, A07012, A07910		
Note:	The relevant alarm threshold (p0604, p0605, p5390) depends on the setting in p0600, p0601 and p0612. If the temperature measurement and temperature model are simultaneously active, then the temperature provided by the temperature model is used. If value = 0: An alarm is output and I_max is not reduced. If value = 1: An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired. The I_max reduction can result in a lower output frequency. - for KTY/PT1000/PT100, the following applies: reduction of I_max. - for PTC (p0601 = 1) or bimetallic NC contact (p0601 = 4) the following applies: I_max is not reduced. If value = 2: An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired. If value = 12: Behavior is always the same as for value 2. For motor temperature monitoring without temperature sensor, when switching off, the model temperature is saved in a non-volatile fashion. When switching on, the same value (reduced by p0614) is taken into account in the model calculation. As a consequence, the UL508C specification is fulfilled.		
p0611[0...n]	I2t motor model thermal time constant / I2t mot_mod T		
VECTOR_G	Can be changed: C2(1), U, T Data type: FloatingPoint32	Calculated: - Dyn. index: MDS, p0130	Access level: 3 Func. diagram: 8017
	P-Group: Motor Not for motor type: ASM, SESM, REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0 [s]	Max 20000 [s]	Factory setting 0 [s]
Description:	Sets the winding time constant. The time constant specifies the warm-up time of the cold stator winding when loaded with the motor standstill current (rated motor current, if the motor standstill current is not parameterized) up until a temperature rise of 63 % of the continuously permissible winding temperature has been reached.		
Dependency:	The parameter is only used for synchronous motors (p0300 = 2xx, 4) and synchronous reluctance motors (p0300 = 6xx). Refer to: r0034, p0612, p0615 Refer to: F07011, A07012, A07910		
Notice:	This parameter is automatically pre-set from the motor database for motors from the motor list (p0301). When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection. When exiting commissioning, p0612 is checked, and where relevant, is pre-assigned to a value that matches the motor power, if a temperature sensor was not parameterized (see p0601).		

2 Parameters

2.2 List of parameters

Note: When parameter p0611 is reset to 0, then this switches out the thermal I2t motor model (refer to p0612).
If no temperature sensor is parameterized, then the ambient temperature for the thermal motor model is referred to p0625.

p0612[0...n]	Mot_temp_mod activation / Mot_temp_mod act		
VECTOR_G	Can be changed: U, T Data type: Unsigned16	Calculated: CALC_MOD_ALL Dyn. index: MDS, p0130	Access level: 2 Func. diagram: 8017, 8018, 8019
	P-Group: - Not for motor type: SESM, REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0010 0000 0010 bin

Description: Setting to activate the motor temperature model.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activate mot_temp_mod 1 (I2t)	Yes	No	-
	01	Activate mot_temp_mod 2	Yes	No	-
	02	Activate mot_temp_mod 3	Yes	No	-
	08	Activate mot_temp_mod 1 (I2t) extensions	Yes	No	-
	09	Activate mot_temp_mod 2 extensions	Yes	No	-
	12	Mot_temp_mod 1 (I2t) ambient temperature can be adjusted	Yes (via p0613)	No (fixed 20 °C)	-

Dependency: For synchronous motors and synchronous reluctance motors, when exiting commissioning, temperature model 1 is automatically activated if a time constant has been entered in p0611.

Refer to: r0034, p0604, p0605, p0606, p0611, p0613, p0615, p0625, p0626, p0627, p0628, r0630, r0631, r0632, r0633, p5350, r5389, p5390, p5391

Refer to: F07011, A07012, A07014, A07910

Notice: For bit 00:

This bit is only automatically activated for permanent-magnet 1FT7 synchronous motors and synchronous reluctance motors. For other permanent-magnet synchronous motors, the user himself must activate motor temperature model 1 (I2t).

It is only possible to activate this motor temperature model (I2t) for a time constant greater than zero (p0611 > 0).

Note: Mot_temp_mod: motor temperature model

For bit 00 (see also bit 8):

This bit is used to activate/deactivate the motor temperature model for permanent-magnet synchronous motors and synchronous reluctance motors.

For bit 01 (see also bit 9):

This bit is used to activate/deactivate the motor temperature model for induction motors.

For bit 02:

This bit is used to activate/deactivate the motor temperature model for 1FK7/1FG1 motors without encoder, 1FK2 and 1FL6.

Motor temperature model 3 cannot be simultaneously activated with another motor temperature model.

For bit 08:

This bit is used to extend the motor temperature model 1 (I2t).

The following applies for firmware version < 4.7 SP6 (only bit 0):

- this bit has no function. Temperature model 1 operates in the standard mode.

Overtemperature at rated load: p0605 - 40 °C

Alarm threshold: p0605

Fault threshold: p0615

The following applies from firmware version 4.7 SP6 (bits 0 and 8):

- temperature model 1 operates in the extended mode.

Overtemperature at rated load: p0627

Alarm threshold: p5390

Fault threshold: p5391

For bit 09:

This bit is used to extend the motor temperature model 2.

For firmware version < 4.7 following applies (only bit 1):

- this bit has no function. Temperature model 2 operates in the standard mode.

From firmware version 4.7 the following applies (bits 1 and 9):

- this bit should be set. Temperature model 2 then operates in the extended mode and the result of the model is more precise.

For bit 12 (only effective if a temperature sensor has not been parameterized):

This bit is used to set the ambient temperature for the motor temperature model 1 (I2t).

The following applies for firmware version < 4.7 SP6 (only bit 0):

- this bit has no function. Temperature model 1 operates with an ambient temperature of 20 °C.

The following applies from firmware version 4.7 SP6 (bits 0 and 12):

- the ambient temperature can be adapted to the conditions using p0613.

p0613[0...n]	Mot_temp_mod 1/3 ambient temperature / Mod 1/3 amb_temp		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-40 [°C]	100 [°C]	20 [°C]
Description:	Sets the ambient temperature for motor temperature model 1 or 3. - temperature model 1 (I2t, p0612.0 = 1): For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies: The parameter is not relevant. From firmware version 4.7 SP6 and p0612.12 = 1, the following applies: The parameter defines the current ambient temperature. - temperature model 3 (p0612.2 = 1): The parameter defines the current ambient temperature.		
Dependency:	Refer to: p0612 Refer to: F07011, A07012		

p0614[0...n]	Thermal resistance adaptation reduction factor / Therm R_adapt red		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	100 [%]	30 [%]
Description:	Sets the reduction factor for the overtemperature of the thermal adaptation of the stator/rotor resistance. The value is a starting value when switching on. Internally, after switch-on, the reduction factor has no effect corresponding to the thermal time constant.		
Dependency:	Refer to: p0610		
Note:	The reduction factor is only effective for p0610 = 12, and refers to the overtemperature.		

p0615[0...n]	Mot_temp_mod 1 (I2t) fault threshold / I2t F thresh		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°C]	220.0 [°C]	180.0 [°C]
Description:	Sets the fault threshold for monitoring the motor temperature for motor temperature model 1 (I2t). The following applies for firmware version < 4.7 SP6: - fault F07011 is output after the fault threshold is exceeded. - fault threshold for r0034 = 100 % * (p0615 - 40 °C) / (p0605 - 40 °C).		

2 Parameters

2.2 List of parameters

The following applies from firmware version 4.7 SP6 and p0612.8 = 1:

- the fault threshold in p0615 is preset when commissioning.
- when a catalog motor with motor temperature model 1 (I2t) is being commissioned for the first time, the threshold value is copied from p0615 to p5391.
- p5391 is of significance for evaluating the fault threshold.

Dependency: The parameter is only used for motor temperature model 1 (I2t).

Refer to: r0034, p0611, p0612

Refer to: F07011, A07012

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

p0616[0...n] Motor overtemperature alarm threshold 1 / Mot temp alarm 1

VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold 1 for monitoring the motor temperature.

Note: The alarm threshold is not, as for p0604, coupled to the timer p0606. The hysteresis for canceling the fault is 2 K.

p0620[0...n] Thermal adaptation, stator and rotor resistance / Mot therm_adapt R

VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	1

Description: Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.

Value:

- 0: No thermal adaptation of stator and rotor resistances
- 1: Resistances adapted to the temperatures of the thermal model
- 2: Resistances adapted to the measured stator winding temperature

Note: For p0620 = 1, the following applies:

The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633.

For p0620 = 2, the following applies:

The stator resistance is adapted using the temperature in r0035. If applicable, the rotor temperature for adapting the rotor resistance is calculated from the stator temperature (r0035) as follows:

$$\theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035$$

For separately excited synchronous motors and p0620 = 1, p0620 = 2 is internally and automatically used for calculating. There is no thermal model to adapt the damping resistances.

p0621[0...n]	Identification stator resistance after restart / Ident rst restart		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	0
Description:	<p>Selects the identification of the stator resistance after booting the Control Unit (only for vector control). The identification is used to measure the actual stator resistance and from the ratio of the result of motor data identification (p0350) to the matching ambient temperature (p0625) the actual mean temperature of the stator winding is calculated. The result is used to initialize the thermal motor model.</p> <p>p0621 = 1: Identification of the stator resistance only when switching on the drive for the first time (pulse enable) after the Control Unit powers up.</p> <p>p0621 = 2: Identification of the stator resistance every time the drive is switched on (pulse enable).</p> <p>p0621 = 3: One-time identification of the cable resistance p0352 without making a change in the thermal motor model (also suitable for synchronous motors).</p>		
Value:	<p>0: No Rs identification 1: Rs identification after switching-on again 2: Rs identification after switching-on each time</p>		
Dependency:	<p>- perform motor data identification (see p1910) with cold motor. - enter ambient temperature at time of motor data identification in p0625. Refer to: p0622, r0623</p>		
Notice:	<p>The calculated stator temperature can only be compared with the measured value of a temperature sensor (KTY/PT1000) to a certain extent, as the sensor is usually the warmest point of the stator winding, whereas the measured value of identification reflects the mean value of the stator winding.</p> <p>Furthermore this is a short-time measurement with limited accuracy that is performed during the magnetizing phase of the induction motor.</p>		
Note:	<p>The measurement is performed in the following cases:</p> <ul style="list-style-type: none"> - an induction motor is being used. - vector control is active (see p1300). - temperature sensor (KTY/PT1000) is not connected. - when switching on, the motor remains at standstill. <p>When a flying restart is performed on a rotating motor, the temperatures of the thermal motor model are set to a third of the overtemperatures. However, this occurs only once when the Control Unit has powered up (e.g. after a power failure).</p> <p>If identification is activated, the magnetizing time is determined via p0622 and not via p0346. Quick magnetizing (p1401.6) is internally deactivated and alarm A07416 is output. The speed is enabled after completion of the measurement.</p>		

p0622[0...n]	Motor excitation time for Rs_ident after switching on again / t_excit Rs_id		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	20.000 [s]	0.000 [s]
Description:	Sets the excitation time of the motor for the stator resistance identification after switching on again (restart).		
Dependency:	Refer to: p0621, r0623		

2 Parameters

2.2 List of parameters

Note: For p0622 < p0346 the following applies:
 If identification is activated, the magnetizing time is influenced by p0622. The speed is enabled after measurement is complete, but not before the time in p0346 has elapsed (see r0056 bit 4). The time taken for measurement also depends on the settling time of the measured current.
 For p0622 >= p0346 the following applies:
 Parameter p0622 is internally limited to the magnetizing time p0346, so that p0346 represents the maximum possible magnetizing time during identification. The entire measurement period (magnetizing plus measurement settling time plus measuring time) will always be greater than p0346.

r0623	Rs identification stator resistance after switch on again / Rs-id Rs aft sw-on		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the stator resistance determined using the Rs identification after switching on again.		
Dependency:	Refer to: p0621, p0622		

p0624[0...n]	Motor temperature offset PT100 / Mot T_offset PT100		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8016
	P-Group: Motor	Unit group: 21_2	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.0 [K]	100.0 [K]	0.0 [K]
Description:	Sets the temperature offset for the PT100 measured value. If there is a difference between the motor temperature displayed in r0035 and the actual motor temperature, then this offset can be entered into this parameter. thereby compensating for the difference.		
Dependency:	Refer to: p0600, p0601, p0602		
Note:	The parameter only has an influence with the following settings: - Temperature sensor of the power unit detected (p0600 = 11). - Sensor type PT100 selected (p0601 = 5). If the resistance in series with the PT100 (e.g. the cable resistance of the feeder cable) is known, the following conversion formula must be used: Offset in p0624 = Measured resistance in ohms x 2.5 K/Ohm Example: Measured cable resistance = 2 Ohm --> 2 Ohm x 2.5 K / Ohm = 5.0 K		

p0625[0...n]	Motor ambient temperature during commissioning / Mot amb_temp comm		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017, 8018
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-40 [°C]	80 [°C]	20 [°C]
Description:	Defines the ambient temperature of the motor for calculating the motor temperature model.		
Dependency:	Refer to: p0350, p0354		
Note:	The parameters for stator and rotor resistance (p0350, p0354) refer to this temperature. If the thermal I2t motor model is activated for permanent-magnet synchronous motors (refer to p0611), p0625 is included in the model calculation if a temperature sensor is not being used (see p0601).		

p0626[0...n]	Motor overtemperature, stator core / Mot T_{over} core		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018
	P-Group: Motor	Unit group: 21_2	Unit selection: p0505
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [K]	200 [K]	50 [K]
Description:	Defines the rated overtemperature of the stator iron referred to ambient temperature in the motor temperature model 2 (p0612.1 = 1).		
Dependency:	For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311. Refer to: p0625		
Notice:	When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).		
p0627[0...n]	Motor overtemperature, stator winding / Mot T_{over} stator		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017, 8018
	P-Group: Motor	Unit group: 21_2	Unit selection: p0505
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	15 [K]	200 [K]	80 [K]
Description:	Defines the rated overtemperature of the stator winding referred to the ambient temperature. - motor temperature model 1 (I2t, p0612.0 = 1): The following applies for firmware version < 4.7 SP6 or p0612.8 = 0: p0605 is of significance for the rated temperature. The following applies from firmware version 4.7 SP6 and p0612.8 = 1: Overtemperature at the rated operating point. - motor temperature model 2 (p0612.1 = 1): Overtemperature at the rated operating point.		
Dependency:	For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311. Refer to: p0625		
Notice:	When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300). The signal is not suitable as a process quantity and may only be used as a display quantity.		
p0628[0...n]	Motor overtemperature rotor / Mot T_{over} rotor		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018
	P-Group: Motor	Unit group: 21_2	Unit selection: p0505
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	20 [K]	200 [K]	100 [K]
Description:	Defines the rated overtemperature of the squirrel cage rotor referred to ambient temperature in the motor temperature model 2 (p0612.1 = 1).		
Dependency:	For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311. Refer to: p0625		

2 Parameters

2.2 List of parameters

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0629[0...n]	Stator resistance reference / R_stator ref		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: 16_1	Unit selection: p0349
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]
Description:	Reference value for the identification of the stator resistance every time the drive is switched on.		
Dependency:	The measurement of the reference value is activated by the automatic calculation (p0340 = 1, 2), if the following conditions apply: - the motor temperature is at this instant in time less than 30 °C (r0035). - a temperature sensor is not being used (p0601). Refer to: p0621, r0623		
Note:	The reference value to identify the stator resistance should be manually entered after the first identification (p0629 = r0623). The identification must be realized when the motor is in a cold state, as the value refers to the ambient temperature p0625. The feeder cable resistance should be entered into p0352 before the measurement. The result must be saved after the first measurement so that the reference is available after the CU has powered up. When changing p0350 or p0352, the reference value p0629 should be re-determined.		

r0630[0...n]	Mot_temp_mod ambient temperature / Mod T_ambient		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: SESM, REL	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Displays the ambient temperature of the motor temperature model (models 2 and 3).		

r0631[0...n]	Mot_temp_mod stator iron temperature / Mod T_stator		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018, 8019
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: SESM, REL	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Displays the stator iron temperature of the motor temperature model (models 2 and 3).		
Note:	For motor temperature model 1 (p0612.0 = 1), this parameter is not valid:		

r0632[0...n]	Mot_temp_mod stator winding temperature / Mod T_winding		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017, 8018, 8019
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: SESM, REL	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Displays the stator winding temperature of the motor temperature model.		
Dependency:	Refer to: F07011, A07012, A07910		

r0633[0...n]	Mot_temp_mod rotor temperature / Mod rotor temp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8018, 8019
	P-Group: Motor	Unit group: 21_1	Unit selection: p0505
	Not for motor type: SESM, REL	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Displays the rotor temperature of the motor temperature model (models 2 and 3).		
Note:	For motor temperature model 1 (p0612.0 = 1), this parameter is not valid:		

p0634[0...n]	Q flux flux constant unsaturated / PSIQ KPSI UNSAT		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [Vs rms]	100.000 [Vs rms]	0.000 [Vs rms]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. The parameter weights the unsaturated component of the quadrature axis flux function.		

p0635[0...n]	Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. This parameter describes the interdependency of the unsaturated component of the quadrature axis current.		
Dependency:	Refer to: p0634		

p0636[0...n]	Q flux direct axis current constant unsaturated / PSIQ KID UNSAT		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. This parameter describes the interdependency of the unsaturated component of the direct axis current.		
Dependency:	Refer to: p0634		

p0637[0...n]	Q flux flux gradient saturated / PSIQ Grad SAT		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [mH]	10000.00 [mH]	0.00 [mH]
Description:	The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients. This parameter describes the gradients of the saturated component over the quadrature axis current.		
Dependency:	Refer to: p0634, p0635, p0636		

p0640[0...n]	Current limit / Current limit		
VECTOR_G	Can be changed: C2(1), U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5722, 6640
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the current limit.		
Dependency:	Refer to: r0209, p0323		
Note:	<p>The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0305, p0323 and p0338.</p> <p>The current limit p0640 is limited to r0209 and p0323. The limit to p0323 is not realized if a value of zero is entered there.</p> <p>The resulting current limit is displayed in r0067 and if required, r0067 is reduced by the thermal model of the Motor Module.</p> <p>The torque and power limits (p1520, p1521, p1530, p1531) matching the current limit are automatically calculated when exiting the quick commissioning using p3900 > 0 or using the automatic parameterization with p0340 = 3, 5. For VECTOR the following applies (p0107):</p> <p>p0640 is limited to 4.0 x p0305.</p> <p>p0640 is pre-assigned for the automatic self commissioning routine (e.g. to 1.5 x p0305, with p0305 = r0207[1]). p0640 must be entered when commissioning the system. This is the reason that p0640 is not calculated by the automatic parameterization when exiting the quick commissioning (p3900 > 0).</p> <p>For SERVO the following applies (p0107):</p> <p>p0640 is pre-assigned as follows using the automatic parameterization (p0340 = 1, p3900 > 0) taking into account the limits r0209 and r0323:</p> <ul style="list-style-type: none"> - for induction motors: p0640 = 1.5 x p0305 - for synchronous motors: p0640 = p0338 		

p0641[0...n]	CI: Current limit scaling signal source / I_lim scal s_src		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6300, 6640
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for scaling the current limit (p0640).		

p0643[0...n] Overvoltage protection for synchronous motors / Overvolt_protect			
VECTOR_G (n/M)	Can be changed: C2(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the overvoltage protection for synchronous motors in the field-weakening range.		
Value:	0: No measure 1: Voltage Protection Module (VPM)		
Dependency:	Refer to: p0316, p1082, p1231, p9601, p9801 Refer to: F07906, F07907		
Notice:	When the speed limiting is removed, the user is responsible for implementing a suitable overvoltage protection.		
Note:	In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage: - limit the maximum speed (p1082) without any additional protection. The maximum speed without protection is calculated as follows: $p1082 \text{ [rpm]} \leq 11.695 * r0297 / p0316 \text{ (or } r0334) \text{ [Nm/A]}$ - use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801). When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM. - activating the internal voltage protection (IVP) with p1231 = 3.		
p0644[0...n] Current limit excitation induction motor / Imax excit ASM			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	300.0 [%]	300.0 [%]
Description:	Maximum excitation current of the induction motor referred to the permissible rated current of the power unit (r0207[0]).		
Dependency:	Only effective for vector control. Refer to: p1401, p1573		
Note:	The parameter is pre-assigned in the automatic calculation for chassis power units.		
p0650[0...n] Actual motor operating hours / Mot t_oper act			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [h]	4294967295 [h]	0 [h]
Description:	Displays the operating hours for the corresponding motor. The motor operating time counter continues to run when the pulses are enabled. When the pulse enable is withdrawn, the counter is held and the value saved.		
Dependency:	The following prerequisites must be fulfilled in order to be able to save the operating hours counter in a non-volatile fashion: - firmware with V2.2 or higher. - Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM). Refer to: p0651 Refer to: A01590		

2 Parameters

2.2 List of parameters

Note: For p0651 = 0, the operating hours counter is disabled.
The operating hours counter in p0650 can only be reset to 0.
The operating hours counter only runs with motor data set 0 and 1 (MDS).

p0651[0...n]	Motor operating hours maintenance interval / Mot t_op maint		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [h]	150000 [h]	0 [h]
Description:	Sets the service/maintenance intervals in hours for the appropriate motor. An appropriate message is output when the operating hours set here are reached.		
Dependency:	Refer to: p0650 Refer to: A01590		
Note:	For p0651 = 0, the operating hours counter is disabled. When setting p0651 to 0, then p0650 is automatically set to 0. The operating hours counter only runs with motor data set 0 and 1 (MDS).		

p0652[0...n]	Motor stator resistance scaling / Mot R_stator scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Sets the factor to evaluate the stator resistance.		
Dependency:	Refer to: p0350, r0370		

p0653[0...n]	Motor stator leakage inductance scaling / Mot L_S_leak scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Sets the factor to evaluate the stator leakage induction.		
Dependency:	Refer to: p0356, r0377		

p0655[0...n]	Motor magnetizing inductance d axis saturated scaling / Mot L_m d sat scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the magnetizing inductance in the direction of the rotor axis (d axis).		
Dependency:	Refer to: p0360, r0382		

p0656[0...n]	Motor magnetizing inductance q axis saturated scaling / Mot L_m q sat scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the magnetizing inductance quadrature to the rotor axis (q axis).		
Dependency:	Refer to: p0361, r0383		

p0657[0...n]	Motor damping inductance d axis scaling / Mot L_damp d scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the damping inductance in the direction of the rotor axis (d axis).		
Dependency:	Refer to: p0358, r0380		

p0658[0...n]	Motor damping inductance q axis scaling / Mot L_damp q scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the damping inductance quadrature to the rotor axis (q axis).		
Dependency:	Refer to: p0359, r0381		

p0659[0...n]	Motor damping resistance d axis scaling / Mot R_damp d scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the damping resistance in the direction of the rotor axis (d axis).		
Dependency:	Refer to: p0354, r0374		

p0660[0...n]	Motor damping resistance q axis scaling / Mot R_damp q scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_EQU	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	300.0 [%]	100.0 [%]
Description:	Factor to evaluate the damping resistance quadrature to the rotor axis (q axis).		
Dependency:	Refer to: p0355, r0375		

p0680[0...7]	Central measuring probe input terminal / Cen meas inp		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	8	0
Description:	Sets the digital input used for the function "central measuring probe evaluation". p0680[0]: Digital input, measuring probe 1 p0680[1]: Digital input, measuring probe 2 ... p0680[7]: Digital input, measuring probe 8		
Value:	0: No measuring probe 1: DI/DO 9 (X122.10/X121.8) 2: DI/DO 10 (X122.12/X121.10) 3: DI/DO 11 (X122.13/X121.11) 4: DI/DO 13 (X132.10/X131.2) 5: DI/DO 14 (X132.12/X131.4) 6: DI/DO 15 (X132.13/X131.5) 7: DI/DO 8 (X122.9/X121.7) 8: DI/DO 12 (X132.9/X131.1)		
Dependency:	Refer to: p0728		
Caution:	In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.		
			
Notice:	Regarding the terminal designation: The first designation is valid for CU320, the second for CU310. To select the values: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).		
Note:	DI/DO: Bidirectional Digital Input/Output Prerequisite: The DI/DO must be set as input (p0728.x = 0). If a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0488, p0489, p0493, p0494, p0495, p0580, p2517 or p2518.		

p0681	BI: Central measuring probe synchronizing signal signal source / Cen meas sync_sig		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the synchronizing signal (SYN) of the function "central measuring probe evaluation". The signal is used to synchronize the common system time between the master and slave.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0682	CI: Central measuring probe control word signal source / Cen meas STW S_src		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the control word of the function "central measuring probe evaluation".		

p0684	Central measuring probe evaluation technique / Cen meas eval_tech		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	0
Description:	Sets the evaluation technique for the "central measuring probe evaluation" function.		
Value:	0: Measurement with handshake 1: Measurement without handshake 2 edges 16: Measurement without handshake more than 2 edges		
Notice:	For p0684 = 16: This evaluation procedure is only activated after parameter save and POWER ON.		
Note:	During measurement without a handshake, the probe may have a higher evaluation frequency. The setting "Measurement without handshake" must be supported by the higher-level control. This setting cannot be used for SIMOTION D with integrated SINAMICS or with CX32. For p0684 = 0: Changing this evaluation procedure to p0684 = 1 is possible in the RUN state. Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON. Permissible combinations in p0922 are: p0922 = 391, 392, 393, 394 For p0684 = 1: Changing this evaluation procedure to p0684 = 0 is possible in the RUN state. Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON. Permissible combinations in p0922 are: p0922 = 391, 392, 393, 394 For p0684 = 16: Changing this evaluation procedure to p0684 = 0 or to p0684 = 1 is only activated after parameter save and POWER ON. Permissible combinations in p0922 are: p0922 = 395

Description:	Sets the leakage inductance of the reverse field exciter in mH for reverse field excitation.		
	A negative value can also be entered as part of optimizing coefficients.		
p0696[0...n]	Brushless excitation ratio / BLE ratio		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	1000.000	0.000
Description:	Sets the ratio between the stator and rotor of the exciter for brushless excitation.		
	For excitation using a rotating-armature synchronous machine, the ratio of the rated excitation current of the main machine to the associated excitation current of the exciter at the rated point of the machine is entered.		
	For excitation using a reverse field induction machine, the physical ratio at standstill is specified.		
Dependency:	Refer to: p0311, p0390		

Notice: For a value = 0, brushless excitation is not activated.

Note: BLE: brushless excitation

p0697[0...n]	Brushless excitation number of pole pairs / BLE PolePairNo		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	20	0
Description:	Sets the pole pair number of the exciter for brushless excitation using a rotating- armature synchronous machine or using a reverse field induction machine.		
Notice:	For a value = 0, brushless excitation is not activated.		
Note:	BLE: brushless excitation		

p0698[0...n]	Brushless excitation, excitation resistance / BLE exc_resist		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 6727
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100.00000 [ohm]	100.00000 [ohm]	0.00000 [ohm]
Description:	Sets the ohmic excitation resistance of the main machine for brushless excitation for a rotating-armature synchronous machine or reverse field induction machine.		
Notice:	For a value = 0, brushless excitation is not activated.		
Note:	When the rotor resistance is known, this value can be added to the excitation resistance. For excitation using a reverse field induction machine, it should be noted that the rotor resistance specified in the data sheet is referred to the stator; however, the excitation resistance of the main machine is referred to the rotor.		
	BLE: brushless excitation		

p0699[0...n]	Excitation configuration / Exc config		
VECTOR_G (n/M)	Can be changed: C2(1, 3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	20	0
Description:	Configuration of the excitation. 0: Excitation via sliprings, default setting. 10: Brushless excitation for rotating-armature synchronous motor with excitation current setpoint input (FCR). 11: Brushless excitation for rotating-armature synchronous motor with independently controlled stator voltage (AVR). 20: Brushless excitation using a reverse field induction machine where the exciter is fed from a SIMOTRAS three-phase AC power controller.		
Value:	0: Excitation via sliprings 10: Brushless excitation via rotating-armature synchr. machine (FCR) 11: Brushless excitation via rotating-armature synchr. machine (AVR) 20: Brushless excit. via reverse field induction machine (SIMOTRAS)		

2 Parameters

2.2 List of parameters

Warning:

For values = 10, 11:

For excitation using a rotating-armature synchronous machine, it is not permissible that a standing measurement is used for motor data identification, as this can damage the excitation winding of the main machine.

Notice:

The following parameters must be assigned values that are not equal to zero in order that the speed-dependent transmission ratio for brushless excitation ($p0699 > 0$) can be calculated:

$p0699 = 10$:

$p0690, p0693, p0696, p0697, p0698$

$p0699 = 11$:

No excitation current setpoint input

$p0699 = 20$:

$p0690, p0692, p0693, p0696, p0697, p0698$

Otherwise, the speed-dependent transmission ratio for brushless excitation as well as for slipping excitation is assumed to be 1.

Note:

FCR: field current control

AVR: autonomous voltage control

SIMOTRAS: Siemens three-phase AC power controller

U/f MM: SINAMICS Motor Module in U/f control as excitation controller

Description:

Displays the access authority at the digital outputs.

Bit = 1:

The control has access authority to the digital output via PROFIBUS or direct access.

Bit = 0:

The drive has access authority to the digital output or the digital input/output is not set as digital output or is not available.

Bit field:

	0	1	0
Description:	Sets the limit for a signal to be output via test sockets.		
Value:	0: Limiting off 1: Limiting on		

2 Parameters

2.2 List of parameters

Index:	[0] = T0 [1] = T1 [2] = T2
Note:	Limiting on: If signals are output outside the permissible measuring range, the signal is limited to 4.98 V or to 0 V. Limiting off: If signals are output outside the permissible measuring range, this causes signal overflow. In the case of signal overflow, the signal jumps from 0 V to 4.98 V or from 4.98 V to 0 V.

r0786[0...2]	Test socket scaling per volt / TestSktScale/Volt		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8134
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the scaling of the signal to be output. A change in the output voltage by 1 volt corresponds to the value in this parameter. The units are determined by the interconnected test signal.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Refer to: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784		
Note:	Example: r0786[0] = 1500.0 and the measuring signal is r0063 (CO: Actual speed smoothed [rpm]). A change of 1 V at the output of test socket T0 corresponds to 1500.0 [rpm].		

p0788[0...2]	Test sockets physical address / Test skt PhyAddr		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin
Description:	Sets the physical address to output signals via the test sockets.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Changes only become effective if p0776 does not equal 99. Refer to: p0789, r0790		

p0789[0...2]	Test sockets physical address gain / TestSktPhyAddrGain		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36	340.28235E36	1.00000
Description:	Sets the gain of a signal output of a physical address via test sockets.		
Index:	[0] = T0 [1] = T1 [2] = T2		
Dependency:	Changes only become effective if p0776 does not equal 99. Refer to: p0788		

r0790[0...2]		Test sockets physical address signal value / TestSocketsPhyAddrVal																																																																																																											
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Terminals Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -																																																																																																										
Description:	Displays the actual value of a signal determined via a physical address.																																																																																																												
Index:	[0] = T0 [1] = T1 [2] = T2																																																																																																												
Dependency:	Only effective when p0776 = 97 or p0776 = 96. Refer to: p0788																																																																																																												
p0795		CU digital inputs simulation mode / CU DI simulation																																																																																																											
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Commands Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133 Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0000 0000 0000 0000 0000 bin																																																																																																										
Description:	Sets the simulation mode for digital inputs.

Dependency:	The setpoint for the input signals is specified using p0796. Refer to: p0796, p9620																																																																																																												
Notice:	If a digital input is used as signal source for the function "STO" (BI: p9620) then it is not permissible to select the simulation mode and this is rejected. Regarding the terminal designation: The first designation stands for CU320, the second for CU310.																																																																																																												
Note:	This parameter is not saved when data is backed-up (p0971, p0977). DI: Digital Input DI/DO: Bidirectional Digital Input/Output																																																																																																												

p0796	CU digital inputs simulation mode setpoint / CU DI simul setp		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32	Calculated: - Dyn. index: -	Access level: 2 Func. diagram: 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133

	21	DI 21 (X132.6/X120.10)	High	Low	-

Dependency: The simulation of a digital input is selected using p0795.
Refer to: p0795

Notice: Regarding the terminal designation:
The first designation is valid for CU320, the second for CU310.

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input
DI/DO: Bidirectional Digital Input/Output

p0799[0...2]	CU inputs/outputs sampling time / CU I/O t_sampl		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(3) Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 2020, 2030, 2031
	P-Group: Commands Not for motor type: - Min	Unit group: - Scaling: - Max	Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]
	0.00 [µs]	5000.00 [µs]	

Description: Sets the sampling time for the inputs and outputs of the Control Unit.

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Not available - analog inputs (AI)
[2] = Not available - analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.
Refer to: p0009

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

p0806	BI: Inhibit master control / PcCtrl inhibit		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to block the master control.		
Dependency:	Refer to: r0807		
Note:	The commissioning tool (drive control panel) uses the master control, for example.		

r0807.0	BO: Master control active / PcCtrl active			
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays what has the master control. The drive can be controlled via the BICO interconnection or from external (e.g. the commissioning tool).			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Master control active	Yes	No
				FP
				5030, 6031
Dependency:	Refer to: p0806			
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.			
Note:	Bit 0 = 0: BICO interconnection active Bit 0 = 1: Master control for PC/AOP The commissioning tool (drive control panel) uses the master control, for example.			

p0809[0...2]	Copy Command Data Set CDS / Copy CDS		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8560
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	15	0
Description:	Copies one Command Data Set (CDS) into another.		
Index:	[0] = Source Command Data Set [1] = Target Command Data Set [2] = Start copying procedure		
Note:	When copying a command data set (CDS), the values in p0700, p1000 and p1500 are not accepted. As a consequence, the associated macros are not executed and inconsistencies are avoided. Procedure: 1. In Index 0, enter which command data set should be copied. 2. In index 1, enter the command data set that is to be copied into. 3. Start copying: set index 2 from 0 to 1. p0809[2] is automatically set to 0 when copying is completed.		

p0810	BI: Command data set selection CDS bit 0 / CDS select., bit 0		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8560
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Command Data Set bit 0 (CDS bit 0).		
Dependency:	Refer to: r0050, p0811, r0836		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The Command Data Set selected using the binector inputs is displayed in r0836. The currently effective command data set is displayed in r0050. A Command Data Set can be copied using p0809.		

p0811	BI: Command data set selection CDS bit 1 / CDS select., bit 1		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8560
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Command Data Set bit 1 (CDS bit 1).		
Dependency:	Refer to: r0050, p0810, r0836		
Note:	The Command Data Set selected using the binector inputs is displayed in r0836. The currently effective command data set is displayed in r0050. A Command Data Set can be copied using p0809.		

p0819[0...2]	Copy Drive Data Set DDS / Copy DDS		
VECTOR_G	Can be changed: C2(15)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8565
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	31	0
Description:	Copies one Drive Data Set (DDS) into another.		
Index:	[0] = Source Drive Data Set [1] = Target Drive Data Set [2] = Start copying procedure		
Note:	Procedure: 1. In Index 0, enter which drive data set is to be copied. 2. In index 1, enter the drive data set data that is to be copied into. 3. Start copying: set index 2 from 0 to 1. p0819[2] is automatically set to 0 when copying is completed.		

p0820[0...n]	BI: Drive Data Set selection DDS bit 0 / DDS select., bit 0		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8565, 8575
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Drive Data Set, bit 0 (DDS, bit 0).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0821[0...n]	BI: Drive Data Set selection DDS bit 1 / DDS select., bit 1		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8565, 8570
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Drive Data Set, bit 1 (DDS, bit 1).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0822[0...n]	BI: Drive Data Set selection DDS bit 2 / DDS select., bit 2		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8565
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Drive Data Set, bit 2 (DDS, bit 2).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0823[0...n]	BI: Drive Data Set selection DDS bit 3 / DDS select., bit 3		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8565
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Drive Data Set, bit 3 (DDS, bit 3).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0824[0...n]	BI: Drive Data Set selection DDS bit 4 / DDS select., bit 4		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8565, 8575
	P-Group: Data sets	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select the Drive Data Set, bit 4 (DDS, bit 4).		
Dependency:	Refer to: r0051, r0837		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p0826[0...n]	Motor changeover motor number / Mot_chng mot No.		
VECTOR_G	Can be changed: C2(3)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: 8575
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	15	0
Description:	Sets the freely assignable motor number for the motor changeover.		
Dependency:	Refer to: p0827		
Notice:	When changing over motor data sets with the same motor number (e.g. star-delta changeover) and for a motor with brake, the motor brake remains open during the changeover.		
Note:	When the motor data sets are changed over, the following applies: The same motor number signifies the same thermal model. For the same motor number, the correction values of the Rs, Lh or kT adaptation are applied for the data set changeover (refer to r1782, r1787, r1797).		

p0827[0...n]	Motor changeover status word bit number / Mot_chg ZSW bitNo.		
VECTOR_G	Can be changed: C2(3)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: MDS, p0130	Func. diagram: 8575
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	15	0
Description:	Sets the bit number for every motor data set. Example: p0827[0] = 0: For MDS0, r0830.0 is switched. p0827[1] = 5: For MDS1, r0830.5 is switched.		
Dependency:	Refer to: p0826, r0830		
Note:	A motor is only changed over (a new motor selected) after the pulses have been suppressed. When the motor data sets are changed over, the following applies: Bit numbers that are not identical, signify that the motor must be changed over.		

p0828[0...n]	BI: Motor changeover feedback signal / Mot_chng fdbk sig				
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3		
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8575		
	P-Group: Motor	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0		
Description:	Sets the signal source for the feedback signal when changing over the motor. For p0833.0 = 1 the following applies: This feedback signal (0/1 edge) is required after a motor changeover to enable the pulses.				
Dependency:	Refer to: p0833				
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.				
r0830.0...15	CO/BO: Motor changeover status word / Mot_chngov ZSW

	15	Motor selection bit 15	High	Low	-
Dependency:	Refer to: p0827				
p0831[0...15]	BI: Motor changeover contactor feedback / Mot_chng cont fdbk				
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8575		
	P-Group: Motor	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0		
Description:	Sets the signal source for the feedback signal of the contactors when changing over motors. There is a fixed inter-relationship between energizing the contactor and the feedback signal. Example: A changeover is to be made between MDS0 (motor 0) and MDS1 (motor 1). The contactors should be switched using bit 4 (contactor 0) and 5 (contactor 1). The changeover should be made with an interconnection of the feedback signal.				

2 Parameters

2.2 List of parameters

Implementation:

MDS0: p0827[0] = 4, interconnect output to switch contactor 0 to r0830.4, p0831[4] = "input, feedback signal, contactor 0"

MDS1: p0827[1] = 5, interconnect output to switch contactor 1 to r0830.5, p0831[5] = "input, feedback signal, contactor 1"

The following sequence applies when changing over from MDS0 to MDS1:

1. Status bit r0830.4 is deleted. When the feedback signal (p0831[4]) is connected, the system waits until the feedback signal "contactor open" is displayed. If the feedback signal is not connected, then the system waits for the switch-off interlocking time of 320 ms.
2. Status bit r0830.5 is set. If the feedback signal (p0831[5]) is connected, the system waits until the feedback signal "contactor closed" is displayed. If the feedback signal is not connected, then the system waits for the switch-on interlocking time of 160 ms.

Index:

- [0] = Feedback signal contactor 0
- [1] = Feedback signal contactor 1
- [2] = Feedback signal contactor 2
- [3] = Feedback signal contactor 3
- [4] = Feedback signal contactor 4
- [5] = Feedback signal contactor 5
- [6] = Feedback signal contactor 6
- [7] = Feedback signal contactor 7
- [8] = Feedback signal contactor 8

p0833		Data set changeover configuration / DS_chng config			
VECTOR_G	Can be changed: C2(15)	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8575		
	P-Group: Data sets	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0010 bin		
Description:	Sets the configuration for the motor and encoder changeover.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Contactor changeover from the application/drive	Application	Drive	-
	01	Pulse suppression by application/drive	Application	Drive	-
	02	Suppress drive parking for EDS changeover	Yes	No	-
Note:	For bit 00: When the bit is set and the motor has to be changed over, then p0827 must be set differently in the appropriate motor data sets. For bit 02: The bit defines whether, for an EDS changeover, the status signal Gn_ZSW.14 is suppressed (parking encoder active). For motor changeover to running motor: The "flying restart" function should also be activated (p1200) when changing over to a motor that is already running.				

r0835.0...12		CO/BO: Data set changeover status word / Data set sw ZSW			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8575		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the status word of the data set switchover.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Motor changeover active	Yes	No	8575
	01	Encoder changeover active	Yes	No	-
	02	Internal parameter calculation active	Yes	No	-
	04	Armature short circuit active	Yes	No	-
	05	Identification running	Yes	No	-
	06	Friction characteristic plot running	Yes	No	-
	07	Rotating measurement running	Yes	No	-
	08	Motor data identification running	Yes	No	-
	10	Wait for pulse suppression	Yes	No	-
	11	Wait for motor changeover feedback signal	Yes	No	-
	12	Frequency response measurement running	Yes	No	-
Note:	This parameter is only supplied with up-to-date values if data set changeover has been selected or is running. For bit 00: The signal is only influenced when a motor changeover is set via p0827 (unequal bit numbers). For bit 01: The signal is only influenced when an encoder changeover is set via p0187, p0188, or p0189. For bit 02: A data set changeover is delayed by the time required for the internal parameter calculation. For bit 04: A data set changeover is only carried out when the armature short circuit is not activated. For bit 05: The following applies for SERVO: A data set changeover is only carried out when pole position identification, encoder adjustment, motor data identification, and rotating measurement are not running.				

The following applies for VECTOR:

A data set changeover is only carried out when pole position identification is not running.

For bit 06:

A data set switchover is only carried out when the friction characteristic is not being plotted.

For bit 07 (VECTOR only):

A data set changeover is only carried out when rotating measurement is not running.

For bit 08 (VECTOR only):

A data set changeover is only carried out when motor data identification is not running.

For bit 10:

A motor changeover is set with p0833.1 = 1. It can only be carried out when the application performs pulse suppression.

For bit 11:

A motor changeover is set with p0833.0 = 1. The pulses are only enabled when the "Motor changeover feedback" signal is detected.

For bit 12:

A data set switchover is only carried out when the moment of inertia determination (p5320 = 0) is not activated.

r0835.2	CO/BO: Data set changeover status word / Data set sw ZSW			
ENC	Can be changed: -	Calculated: -	Access level: 2

	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the drive data set (DDS) selected via the binector input.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DDS selection bit 0	ON	OFF	-
	01	DDS selection bit 1	ON	OFF	-
	02	DDS selection bit 2	ON	OFF	-
	03	DDS selection bit 3	ON	OFF	-
	04	DDS selection bit 4	ON	OFF	-
Dependency:	Refer to: r0051, p0820, p0821, p0822, p0823, p0824				
Note:	Drive data sets are selected via binector input p0820 and following. The currently effective drive data set is displayed in r0051. If there is only one data set, then a value of 0 is displayed in this parameter and not the selection via binector inputs.				

r0838[0...3]	Motor/Encoder Data Set selected / MDS/EDS selected			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8565	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the selected Motor Data Set (MDS) and the selected Encoder Data Sets (EDS).			
Index:	[0] = Motor Data Set MDS selected [1] = Encoder 1 Encoder Data Set EDS selected [2] = Encoder 2 Encoder Data Set EDS selected [3] = Encoder 3 Encoder Data Set EDS selected			
Dependency:	Refer to: r0049, p0186, p0187, p0188, p0189			
Note:	Value 99 means the following: No encoder assigned (not configured).			

p0839	Motor changeover contactor control delay time / Mot_chg ctrl t_del			
VECTOR_G	Can be changed: C2(3)	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	500 [ms]	0 [ms]	
Description:	Sets the delay time for the contactor control for the motor changeover.			
Note:	The delay time is taken into account in the following cases: - for feedback signal, previous contactor "Open". The new motor contactor is controlled (energized) after the delay time has expired. - for the feedback signal, new motor contactor "Closed". The pulses are enabled after the delay time has expired.			

p0840[0...n]	BI: ON / OFF (OFF1) / ON / OFF (OFF1)		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "ON/OFF (OFF1)". For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p1055, p1056		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	For binector input p0840 = 0 signal, the motor can be moved, jogging using binector input p1055 or p1056. The command "ON/OFF (OFF1)" can be issued using binector input p0840 or p1055/p1056. For binector input p0840 = 0 signal, the switching on inhibited is acknowledged. Only the signal source that originally switched on can also switch off again. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	For drives with closed-loop speed control (p1300 = 20, 21), the following applies: - BI: p0840 = 0 signal: OFF1 (braking with the ramp-function generator, then pulse suppression) For drives with closed-loop torque control (p1300 = 22, 23), the following applies: - BI: p0840 = 0 signal: immediate pulse suppression For drives with closed-loop torque control (activated using p1501), the following applies: - BI: p0840 = 0 signal: No dedicated braking response, but pulse cancelation when standstill is detected (p1226, p1227) For drives with closed-loop speed/torque control, the following applies: - BI: p0840 = 0/1 signal: ON (pulses can be enabled) r0863.1 of a drive can also be selected as signal source.		

p0840[0...n]	BI: ON / OFF (OFF1) / ON / OFF (OFF1)		
B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "ON/OFF (OFF1)". For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p1055, p1056		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	For binector input p0840 = 0 signal, the switching on inhibited is acknowledged. Only the signal source that originally switched on can also switch off again. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	For active infeeds (Active Line Module and Smart Line Module) the following applies: - BI: p0840 = 0 signal: OFF1 (reduce Vdc along the ramp, then pulse suppression and precharging contactor/line contactor open) - BI: p0840 = 0/1 signal: ON (precharging contactor/line contactor close, pulses can be enabled)		

For passive infeeds (Basic Line Module) the following applies:

- BI: p0840 = 0 signal: OFF1 (precharging contactor/line contactor open)
- BI: p0840 = 0/1 signal: ON (precharging contactor/line contactor close)

r0863.1 of a drive can also be selected as signal source.

Switching on can be delayed with a wait time (p0862).

Switching off can also be delayed with a wait time (p3490).

p0844[0...n]	BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 S_src 1		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description:

Sets the first signal source for the command "No coast down/coast down (OFF2)".

The following signals are AND'ed:

- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).

BI: p0844 = 0 signal or BI: p0845 = 0 signal

- OFF2 (immediate pulse suppression and switching on inhibited)

BI: p0844 = 1 signal and BI: p0845 = 1 signal

- no OFF2 (enable is possible)

Caution:

When "master control from PC" is activated, this binector input is ineffective.

Notice:

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0844[0...n]	BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 S_src 1		
B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description:

Sets the first signal source for the command to instantaneously switch off the drive.

This corresponds to command "No coast down/coast down (OFF2)" for drives.

The following signals are AND'ed:

- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).

BI: p0844 = 0 signal or BI: p0845 = 0 signal

- OFF2 (immediate pulse suppression and switching on inhibited)

BI: p0844 = 1 signal and BI: p0845 = 1 signal

- no OFF2 (enable is possible)

Caution:

When "master control from PC" is activated, this binector input is ineffective.

Notice:

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note:

For binector input p0844 = 0 signal or p0845 = 0 signal, the following applies:

- precharging contactor/line contactor is additionally opened.

p0845[0...n]	BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 S_src 2		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8720, 8820, 8920

Description: Sets the first signal source for the command "No quick stop/quick stop (OFF3)".
The following signals are AND'ed:

- BI: p0848 "No quick stop / quick stop (OFF3) signal source 1"
- BI: p0849 "No quick stop / quick stop (OFF3) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 2 (STW1.2).
BI: p0848 = 0 signal or BI: p0849 = 0 signal

- OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switching on inhibited)

BI: p0848 = 1 signal and BI: p0849 = 1 signal

- no OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For drives with closed-loop torque control (activated using p1501), the following applies:
BI: p0848 = 0 signal:

- no dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227).

p0849[0...n]	BI: No Quick Stop / Quick Stop (OFF3) signal source 2 / OFF3 S_src 2		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the second signal source for the command "No quick stop/quick stop (OFF3)".
The following signals are AND'ed:

- BI: p0848 "No quick stop / quick stop (OFF3) signal source 1"
- BI: p0849 "No quick stop / quick stop (OFF3) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 2 (STW1.2).
BI: p0848 = 0 signal or BI: p0849 = 0 signal

- OFF3 (braking along the OFF3 ramp (p1135), then pulse suppression and switching on inhibited)

BI: p0848 = 1 signal and BI: p0849 = 1 signal

- no OFF3 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is effective.

Note: For drives with closed-loop torque control (activated using p1501), the following applies:
BI: p0849 = 0 signal:

- no dedicated braking response, but pulse suppression when standstill is detected (p1226, p1227).

p0852[0...n]	BI: Enable operation/inhibit operation / Enable operation		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "enable operation/inhibit operation".
 For the PROFIdrive profile, this command corresponds to control word 1 bit 3 (STW1.3).
 BI: p0852 = 0 signal
 Inhibit operation (suppress pulses).
 BI: p0852 = 1 signal
 Enable operation (pulses can be enabled).

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0854[0...n]	BI: Control by PLC/no control by PLC / Master ctrl by PLC		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".
 For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
 BI: p0854 = 0 signal
 No control by PLC
 BI: p0854 = 1 signal
 Master control by PLC.

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.
 If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0854	BI: Control by PLC/no control by PLC / Master ctrl by PLC		
ENC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2501, 8720, 8820, 8920
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "control by PLC/no control by PLC". For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10). BI: p0854 = 0 signal No control by PLC BI: p0854 = 1 signal Master control by PLC.		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1. If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).		
p0855[0...n]	BI: Unconditionally release holding brake / Uncond open brake		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 2701, 2707
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "unconditionally open holding brake".		
Dependency:	Refer to: p0858		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The signal via binector input p0858 "Unconditionally close holding brake" has a higher priority than via binector input p0855 "Unconditionally open holding brake".		
p0856[0...n]	BI: Enable speed controller / n_ctrl enable		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 2701, 2707
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "enable speed controller" (r0898.12). 0 signal: Set the I component and speed controller output to zero. 1 signal: Enable speed controller.		
Dependency:	Refer to: r0898		
Note:	If "enable speed controller" is withdrawn, then an existing brake will be closed. If "enable speed controller" is withdrawn, the pulses are not suppressed.		

p0857	Power unit monitoring time / PU t_monit		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8760, 8864, 8964
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	100.0 [ms]	60000.0 [ms]	6000.0 [ms]
Description:	Sets the monitoring time for the power unit. The following applies for infeeds and drives: The monitoring time is started after an 0/1 edge of the ON/OFF1 command. If the power unit does not return a READY signal within the monitoring time, then fault F06000 (infeeds) or F07802 (drives) is output. For drives, the following also applies: After the pulse enable (operation enabled, p0852), the monitoring time is re-started. If the infeed does not signal ready to the drive within the monitoring time (using binector input p0864 of the drive), fault F07840 is initiated.		
Dependency:	Refer to: F06000, F07802, F07840, F30027		
Notice:	The maximum time to precharge the DC link is monitored in the power unit and cannot be changed. The maximum duration of the precharging depends on the power class and the power unit design. The monitoring time for the precharging is started after the ON command (BI: p0840 = 0/1 signal). Fault F30027 is output when the maximum precharging duration is exceeded.		
Note:	The factory setting for p0857 depends on the power class and the design of the power unit. The monitoring time for the ready signal of the power unit includes the time to precharge the DC link and, if relevant, the de-bounce time of the contactors. If an excessively low value is entered into p0857, then after enable, this results in the corresponding fault.		
p0858[0...n]	BI: Unconditionally close holding brake / Uncond close brake		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 2701, 2707
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the command "unconditionally close holding brake".		
Dependency:	Refer to: p0855		
Note:	The signal via binector input p0858 "Unconditionally close holding brake" has a higher priority than via binector input p0855 "Unconditionally open holding brake". For a 1 signal via binector input p0858, the command "unconditionally close the holding brake" is executed and internally a zero setpoint is entered.		
p0860	BI: Line contactor feedback signal / Line contact feedb		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2634, 8734, 8834, 8934
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	863.1
Description:	Sets the signal source for the feedback signal from the line contactor.		
Recommendation:	When the monitoring is activated (BI: p0860 not equal to r0863.1), then to control the line contactor, signal BO: r0863.1 of its own drive object should be used.		
Dependency:	Refer to: p0861, r0863 Refer to: F07300		

- Notice:** The line contactor monitoring is deactivated if the control signal of the particular drive object is set as the signal source for the feedback signal of the line contactor (BI: p0860 = r0863.1).
- Note:** The state of the line contactor is monitored depending on signal BO: r0863.1.
When the monitoring is activated (BI: p0860 not equal to r0863.1), fault F07300 is then also output if the contactor is closed before it is controlled using r0863.1.

p0861		Line contactor monitoring time / LineContact t_mon		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2634, 8734, 8834, 8934	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	5000 [ms]	100 [ms]	
Description:	Sets the monitoring time of the line contactor. This time starts each time that the line contactor switches (r0863.1). If a feedback signal is not received from the line contactor within the time, a message is output.			
Dependency:	Refer to: p0860, r0863 Refer to: F07300			
Note:	The monitoring function is disabled for the factory setting of p0860.			

p0862		Power unit ON delay / PU t_on		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2610, 8732, 8832, 8932	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	65000 [ms]	0 [ms]	
Description:	Sets the delay time for the control command of the power unit and a line contactor, if used.			
Note:	This means that it is possible to realize a shifted (delayed) precharging or switch-on using a single ON command. When the infeed units are active, before the line contactor is closed, an offset adjustment of the current measurement is carried out for a duration of 120 ms (p3491).			

r0863.0...2		CO/BO: Drive coupling status word/control word / CoupleZSW/STW			
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Commands	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the status word and control word of the drive coupling.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Closed-loop control operation	Yes	No	2610, 8710, 8810, 8910
	01	Energize contactor	Yes	No	2610, 2634, 7990, 8734, 8834, 8934
	02	Infeed line supply failure	Yes	No	-
Dependency:	Refer to: p0864				

2 Parameters

2.2 List of parameters

Note: For bit 00:
 Bit 0 signals that the infeed is ready.
 When the operating signal is transferred via binector output r0863.0 this allows several drives to start (run-up) staggered over time when they are simultaneously switched on.
 To realize this, the following connections/interconnections are required:
 Drive 1: Interconnect binector input p0864 with binector output r0863.0 of the infeed
 Drive 2: Interconnect binector input p0864 with binector output r0863.0 of drive 1
 Drive 3: Interconnect binector input p0864 with binector output r0863.0 of drive 2 etc.
 The first drive only transfers the operating signal to the next drive after it has reached its ready condition.
 For bit 01:
 Bit 1 is used to control an external line contactor.
 For bit 02:
 This bit only signals line supply failure for Active Infeed (A_INF) and Smart Infeed (S_INF).

p0864		BI: Infeed operation / INF operation		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2610, 8710, 8910	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the operating signal of the infeed (e.g. BO: r0863.0).			
Dependency:	Refer to: r0863			
Note:	The sequence control of a servo/vector drive requires this signal. The following applies for an infeed without DRIVE-CLiQ: For these infeeds, the "ready" message is available via an output terminal. This signal must be connected to a digital input. The drives supplied from this infeed must use this signal as ready signal (BI: p0864 = digital input).			

p0867		Power unit main contactor holding time after OFF1 / PU t_MC after OFF1		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [ms]	500.0 [ms]	50.0 [ms]	
Description:	Sets the main contactor holding time after OFF1 After withdrawing the OFF1 enable (signal source of p0840), the main contactor is only opened after the main contactor holding time has elapsed.			
Recommendation:	When operating a drive connected to SINUMERIK, which only closes the main contactor with the OFF1 command (blocksize, chassis), p0867 should be set as a minimum to 50 ms.			
Dependency:	Refer to: p0869			
Note:	For p0869 = 1 (keep main contactor closed for STO), after withdrawing STO, the switching on inhibited must be acknowledged via the signal source of p0840 = 0 (OFF1) – and before the main contactor holding time expires, should go back to 1, otherwise the main contactor will open.			

p0868		Power unit debounce time/wait time / PU t_debnc/t_wait		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	65000 [ms]	65000 [ms]	
Description:	Sets the debounce time or wait time for the power unit. The following applies for "Chassis" format Motor Modules: - sets the debounce time for the DC circuit breaker. The following applies for "Chassis" format AC/AC converters: - sets the wait time for the thyristor rectifier.			
Note:	The following applies if p0868 = 65000 ms: The debounce time defined internally in the power unit's EEPROM is implemented.			

p0869		Sequence control configuration / Seq_ctrl config			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Commands	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for the sequence control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Keep main contactor closed for STO	Yes	No	-
Dependency:	Refer to: p0867				
Note:	STO: Safe Torque Off For bit 00: After withdrawing the OFF1 enable (signal source of p0840), the main contactor is opened after the main contactor holding time has elapsed. For p0869.0 = 1, after withdrawing STO, the switching on inhibited must be acknowledged via the signal source of p0840 = 0 (OFF1) – and before the main contactor holding time expires (p0867), should go back to 1, otherwise the main contactor will open.				

p0869		Sequence control configuration / Seq_ctrl config			
B_INF	Can be changed: T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8732, 8832, 8932		
	P-Group: Commands	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for the sequence control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	Wait for the feedback signal from the external main contactor	Yes	No	8732, 8832, 8932
Notice:	For chassis units, the following applies: Setting p0869.1 = 1 is not permissible, if, using p0860 the internal circuit breaker is monitored (this is not controlled with r0863.1).				
Note:	For bit 01: For p0869.1 = 1, before starting to charge the DC link (r0899.8 = 1), the system waits for a feedback signal from the external main contactor (p0860 = 1 signal). The main contactor must be controlled using r0863.1. Waiting for the contactor feedback signal is especially necessary if the external main contactor has long switching times, which would lead to the precharging time being exceeded (F06000, F30027).				

2 Parameters

2.2 List of parameters

p0870	BI: Close main contactor / Close main cont			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source to close the main contactor.			
Note:	The main contactor is also closed when the converter is switched on after issuing the necessary enable signals. A binector input p0870 = 1 signal prevents the main contactor from being opened when enable signals are withdrawn.			
r0873	CO/BO: Infeed total operation / INF total oper			
B_INF	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8732, 8832	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the operational readiness of the infeeds when using Smart Line Module (SLM) and Basic Line Module (BLM) together (mixed operation). In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.			
Dependency:	Refer to: r0863, p0874			
Note:	Mixed operation is not possible with the Active Line Module (ALM)!			
p0874	BI: Smart/ Basic Line Module operation / SLM/BLM operation			
B_INF	Can be changed: T	Calculated: -	Access level: 2	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 8732, 8832	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Setting to interconnect the ready signal for mixed operation of Smart Line Module (SLM) and Basic Line Module (BLM). In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.			
Dependency:	Refer to: r0863, r0873			
Note:	Mixed operation is not possible with the Active Line Module (ALM)!			
p0894	Parking pre-setting / Parking pre-set			
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Pre-setting for the "Parking axis" and "Parking encoder" function.			
Bit field:	Bit	Signal name	1 signal	0 signal FP
	00	Default with interconnection	Park	Do not park -
Dependency:	Refer to: p0480, p0897			

Note: For bit 00:
If there is at least one BICO interconnection for "Parking axis" or "Parking encoder", this default setting is taken into consideration during power up.

p0895[0...n]	BI: Activate/deactivate power unit components / PU_comp act/deact		
VECTOR_G, B_INF	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dyn. index: PDS, p0120	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source to activate/deactivate a power unit component.

Dependency: BI: p0895 = 0 signal
Deactivate power unit components.
BI: p0895 = 1 signal
Activate power unit components
Refer to: p0125, r0126
Refer to: A05054

Caution: It is not permissible to deactivate drive objects with safety functions enabled.

Notice: For Active Line Modules in the "Chassis" format, the Voltage Sensing Module (VSM, p0145) belonging to the power unit is automatically activated/deactivated.

Note: The power unit is only deactivated when the pulses are suppressed.
For units connected in parallel, when one of the power units is deactivated, then the enable in p7001 is withdrawn.

r0896.0	BO: Parking axis, status word / Parking axis, ZSW		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word for the "parking axis" function.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Parking axis active	Yes	No	-

Dependency: Refer to: p0897

p0897	BI: Parking axis selection / Parking axis sel		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to select the "parking axis" function.

Dependency: BI: p0897 = 0 signal
The function "parking axis" is not selected.
BI: p0897 = 1 signal
The function "parking axis" is selected.
Refer to: r0896

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: After it has been selected the "parking axis" function only becomes active when the pulses are suppressed.

r0898.0...15	CO/BO: Control word drive object 1 / STW DO1		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 2

	15	Setpoint enable from the brake control	Yes	No	-

2 Parameters

2.2 List of parameters

Note: For bits 00, 01, 02, 04, 05, 06, 09:
For PROFIdrive, these signals are used for status word 1.
For bit 13:
When the "Safe Brake Control" (SBC) is activated and selected, the brake is no longer controlled using this signal.
For bit 14, 15:
These signals are only of significance when the "extended brake control" function module is activated (r0108.14 = 1).

r0899.0...12

CO/BO: Status word sequence control infeed / ZSW seq_ctrl INF

B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8726
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the status word of the sequence control of the infeed unit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ready for switching on	Yes	No	-
	01	Ready	Yes	No	-
	02	Operation enabled	Yes	No	-
	04	No OFF2 active	OFF2 inactive	OFF2 active	-
	06	Switching on inhibited	Yes	No	-
	08	Switching-on operation active	Yes	No	-
	09	Control request	Yes	No	-
	11	Precharging complete	Yes	No	-
	12	Line contactor closed	Yes	No	-

Note: For bits 00, 01, 02, 04, 06, 09:
For PROFIdrive, these signals are used for status word 1.

r0899.7...9

CO/BO: Status word sequence control encoder DO / ZSW seq_ctrl encDO

ENC	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word for sequence control on the encoder drive object.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	07	Drive ready	Yes	No	-
	09	Control request	Yes	No	-

Note: For PROFIdrive, this signal is used for status word ZSW2_ENC.

p0918

PROFIBUS address / PB address

CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2401, 2410
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	126	126

Description: Displays or sets the PROFIBUS address for PROFIBUS interface on the Control Unit.

The address can be set as follows:

1) Using the address switch on the Control Unit.

--> p0918 can then only be read and displays the selected address.

--> A change only becomes effective after a POWER ON.

2) Using p0918

--> Only if the address 00 hex, 7F hex, 80 hex, or FF hex has been set using the address switch.

--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".

--> A change only becomes effective after a POWER ON.

Note:

Permissible PROFIBUS addresses: 1 ... 126 (01 hex ... 7E hex)

Address 126 is used for commissioning.

Every PROFIBUS address change only becomes effective after a POWER ON.

The parameter is not influenced by setting the factory setting.

999

999

Description:

Sets the send and receive telegram.

Value:

1: Standard telegram 1, PZD-2/2
2: Standard telegram 2, PZD-4/4
20: Standard telegram 20, PZD-2/6
220: SIEMENS telegram 220, PZD-10/10
352: SIEMENS telegram 352, PZD-6/6
999: Free telegram configuration with BICO

Caution:

Telegrams 2, 3 and 4 are not suitable for sensorless vector control (p1300 = 20). For sensorless vector control, it is necessary that the setpoint speed is entered at the ramp-function generator input (e.g. p1070) and not after the ramp-function generator (p1155).

Note:

If a value is not equal to 999, a telegram is set and the automatically set interconnections in the telegram are inhibited.

The inhibited interconnections can only be changed again after setting value 999.

	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position of the "Pulses enabled" status signal in the PROFIdrive telegram.		
Index:	[0] = Signal number [1] = Bit position		

p0925	PROFIdrive clock synchronous sign-of-life tolerance / PD SoL_tol		
VECTOR_G (n/M), ENC	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2410
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	1
Description:	Sets the number of tolerated consecutive sign-of-life errors of the isochronous master. The sign-of-life signal is normally received in PZD4 (control word 2) from the master.		
Dependency:	Refer to: p2045, r2065 Refer to: F01912		
Note:	The sign-of-life monitoring is disabled for p0925 = 65535.		

r0930	PROFIdrive operating mode / PD operating mode		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the operating mode. 1: Closed-loop speed controlled operation with ramp-function generator 2: Closed-loop position controlled operation 3: Closed-loop speed controlled operation without ramp-function generator		

r0944	CO: Counter for fault buffer changes / Fault buff change		
All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the counter for changes of the fault buffer. This counter is incremented every time the fault buffer changes.		
Recommendation:	Used to check whether the fault buffer has been read out consistently.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109		

r0945[0...63]	Fault code / Fault code		
All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the numbers of faults that have occurred.		
Dependency:	Refer to: r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122		
Notice:	The properties of the fault buffer should be taken from the corresponding product documentation.		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). Fault buffer structure (general principle): r0945[0], r0949[0], r0948[0], r2109[0], r3115[0] --> actual fault case, fault 1 ... r0945[7], r0949[7], r0948[7], r2109[7], r3115[7] --> actual fault case, fault 8 r0945[8], r0949[8], r0948[8], r2109[8], r3115[8] --> 1st acknowledged fault case, fault 1 ... r0945[15], r0949[15], r0948[15], r2109[15], r3115[15] --> 1st acknowledged fault case, fault 8 ... r0945[56], r0949[56], r0948[56], r2109[56], r3115[56] --> 7th acknowledged fault case, fault 1 ... r0945[63], r0949[63], r0948[63], r2109[63], r3115[63] --> 7th acknowledged fault case, fault 8		

r0946[0...65534]	Fault code list / Fault code list		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Lists the fault codes stored in the drive unit. The indices can only be accessed with a valid fault code. Example: r0946[0...999] = 0 --> fault code 0 ... 999 is not available r0946[1000] = 1000 --> fault code 1000 is available r0946[1001] = 1001 --> fault code 1001 is available ... r0946[1008] = 0 --> fault code 1008 is not available ...		
Dependency:	The parameter assigned to the fault code is entered in r0951 under the same index.		

r0947[0...63]	Fault number / Fault number		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	This parameter is identical to r0945.		

r0948[0...63]	Fault time received in milliseconds / t_fault rcv ms		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the system runtime in milliseconds when the fault occurred.		
Dependency:	Refer to: r0945, r0947, r0949, r2109, r2114, r2130, r2133, r2136, r3115, r3120, r3122		
Notice:	The time comprises r2130 (days) and r0948 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the fault buffer and the assignment of the indices is shown in r0945. When the parameter is read via PROFIdrive, the TimeDifference data type applies.		
r0949[0...63]	Fault value / Fault value		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays additional information about the fault that occurred (as integer number).		
Dependency:	Refer to: r0945, r0947, r0948, r2109, r2130, r2133, r2136, r3115, r3120, r3122		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the fault buffer and the assignment of the indices is shown in r0945.		
p0952	Fault cases counter / Fault cases qty		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 6700, 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Number of fault situations that have occurred since the last reset.		
Dependency:	The fault buffer is deleted (cleared) by setting p0952 to 0. In order that faults with "POWER ON" acknowledgment can also be cleared from the fault buffer, POWER ON must first be carried out. Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136		
r0963	PROFIBUS baud rate / PB baud rate		
CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	255	-
Description:	Displays the corresponding value for the PROFIBUS baud rate.		
Value:	0: 9.6 kbit/s 1: 19.2 kbit/s 2: 93.75 kbit/s 3: 187.5 kbit/s 4: 500 kbit/s 6: 1.5 Mbit/s		

2 Parameters

2.2 List of parameters

7: 3 Mbit/s
 8: 6 Mbit/s
 9: 12 Mbit/s
 10: 31.25 kbit/s
 11: 45.45 kbit/s
 255: Unknown

r0964[0...6]	Device identification / Device ident		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the device identification.		
Index:	[0] = Company (Siemens = 42) [1] = Device type [2] = Firmware version [3] = Firmware date (year) [4] = Firmware date (day/month) [5] = Number of drive objects [6] = Firmware patch/hot fix		
Note:	Example: r0964[0] = 42 --> SIEMENS r0964[1] = device type, see below r0964[2] = 403 --> first part of the firmware version V04.03 (for second part, refer to index 6) r0964[3] = 2010 --> year 2010 r0964[4] = 1705 --> 17th of May r0964[5] = 2 --> 2 drive objects r0964[6] = 200 --> second part, firmware version (complete version: V04.03.02.00) Device type: r0964[1] = 5200 --> SINAMICS G150 CU320-2 DP r0964[1] = 5201 --> SINAMICS G150 CU320-2 PN r0964[1] = 5210 --> SINAMICS G130 CU320-2 DP r0964[1] = 5211 --> SINAMICS G130 CU320-2 PN		

r0965	PROFIdrive profile number profile version / PD profile nr vers		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the PROFIdrive profile number and profile version. Constant value = 032A hex. Byte 1: Profile number = 03 hex = PROFIdrive profile Byte 2: profile version = 2A hex = 42 dec = version 4.2		
Note:	When the parameter is read via PROFIdrive, the Octet String 2 data type applies.		

p0969	System runtime relative / t_System relative		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8060
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	4294967295 [ms]	0 [ms]
Description:	Displays the system runtime in ms since the last POWER ON.		
Note:	The value in p0969 can only be reset to 0. The value overflows after approx. 49 days. When the parameter is read via PROFIdrive, the TimeDifference data type applies.		
p0970	Reset drive parameters / Drive par reset		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate the reset of the parameters of an individual drive unit. Parameters p0100, p0205 (only for VECTOR) and the parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).		
Value:	0: Inactive 1: Start a parameter reset 5: Starts a safety parameter reset 6: Start reset non-safety/safety parameters 10: Start loading parameters saved with p0971 = 10 11: Start loading parameters saved with p0971 = 11 12: Start loading parameters saved with p0971 = 12 30: Start loading delivery condition saved with p0971 = 30 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0. For p0970 = 5 the following applies: The password for Safety Integrated must be set. When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed. Then save the parameters and carry out a POWER ON.		
p0970	Reset drive parameters / Drive par reset		
VECTOR_G	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate the reset of the parameters of an individual drive unit. Parameters p0100, p0205 (only for VECTOR) and the parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).		

2 Parameters

2.2 List of parameters

Value: 0: Inactive
1: Start a parameter reset
5: Starts a safety parameter reset
6: Start reset non-safety/safety parameters
100: Start a BICO interconnection reset

Dependency: Refer to: F01659

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.
For p0970 = 5 the following applies:
The password for Safety Integrated must be set.
When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed.
Then save the parameters and carry out a POWER ON.
For p0970 = 1 the following applies:
If a Safety Integrated Function is parameterized (p9601), then the safety parameters are not reset. In this case, a fault F01659 is output with fault value 2.

p0970	Reset infeed parameter / INF par reset		
B_INF	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters of an individual infeed unit. The parameters of the basic commissioning (refer to p0009) are in this case not reset (p0107, p0108, p0121, p0170). These can only be reset using the factory setting of the complete drive unit (p0976). The sampling times (p0111, p0112, p0115) are only not reset if this results in a conflict with the basic clock cycle (p0110).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0.		

p0970	TM120 reset parameters / TM120 par reset		
TM120	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 120 (TM120).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970	TM150 reset parameters / TM150 par reset		
TM150	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 150 (TM150).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.		

p0970	TM31 reset parameters / TM31 par reset		
TM31	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 31 (TM31). The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle. Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Dependency:	Refer to: p0010		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0.		

p0970	TB30 reset parameters / TB30 par reset		
TB30	Can be changed: C2(30)	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100	0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Board 30 (TB30). The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle. Parameter p0161 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		

2 Parameters

2.2 List of parameters

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0970	TM54F reset parameters / TM54F par reset		
TM54F_MA	Can be changed: C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to initiate a reset of the parameters on Terminal Module 54F (TM54F). Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 5: Starts a safety parameter reset 6: Start reset non-safety/safety parameters 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0. For p0970 = 5 the following applies: The password for Safety Integrated must be set. When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed. Then save the parameters and carry out a POWER ON.		

p0970	ENCODER reset parameters / ENC par reset		
ENC	Can be changed: C2(30) Data type: Unsigned16 P-Group: Factory settings Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The parameter is used to initiate the reset of the parameters on the ENCODER drive object. Parameter p0141 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).		
Value:	0: Inactive 1: Start a parameter reset 100: Start a BICO interconnection reset		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	A factory setting run can only be started if p0010 was first set to 30 (parameter reset). At the end of the calculations, p0970 is automatically set to 0. Parameter reset has been completed if p0970 and p0010 have been set to 0.		

p0971		Save drive object parameters / Drv_obj par save		
All objects	Can be changed: U, T	Calculated: -	Access level: 1	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Factory settings	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Setting to save the parameter of the particular drive object in the non-volatile memory. When saving, only the adjustable parameters intended to be saved are taken into account.			
Value:	0: Inactive 1: Save drive object			
Dependency:	Refer to: p0977, p1960, p3845, r3996			
Warning:	If the Control Unit power supply is switched off while data is being saved, then the backup of all adjustable parameters can be lost, and the Control Unit must be recommissioned.			
				
Notice:	The Control Unit power supply may only be switched off after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0). Writing to parameters is inhibited while saving. The progress while saving is displayed in r3996.			
Note:	Starting from the particular drive object, the following parameters are saved: CU3xx: Device-specific parameters and PROFIBUS device parameters. Other objects: Parameters of the actual object and PROFIBUS device parameters. Prerequisite: Before saving with p0971, all parameters (topology, all drive objects) must have been saved at least once using p0977 = 1.			

p0972		Drive unit reset / Drv_unit reset		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 1	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: All groups	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	3	0	
Description:	Sets the required procedure to execute a hardware reset for the drive unit.			
Value:	0: Inactive 1: Hardware-Reset immediate 2: Hardware reset preparation 3: Hardware reset after cyclic communication has failed			
Danger:	It must be absolutely ensured that the system is in a safe condition. The memory card/device memory of the Control Unit must not be accessed.			
				
Note:	If value = 1: Reset is immediately executed and communications interrupted. After communications have been established, check the reset operation (refer below). This value cannot be set in operation. If value = 2: Help to check the reset operation. Firstly, set p0972 = 2 and then read back. Secondly, set p0972 = 1 (it is possible that this request is possibly no longer acknowledged). The communication is then interrupted. After communications have been established, check the reset operation (refer below). If value = 3: The reset is executed after interrupting cyclic communication. This setting is used to implement a synchronized reset by a control for several drive units. If cyclic communication is not active, then the reset is immediately executed.			

2 Parameters

2.2 List of parameters

If the cyclic communication is active for both PROFIdrive interfaces, then the reset is executed after completing both cycle communications. After communications have been established, check the reset operation (refer below).

To check the reset operation:

After the drive unit has been restarted and communications have been established, read p0972 and check the following:

p0972 = 0 --> the reset was successfully executed.

p0972 > 0 --> the reset was not executed.

r0975[0...10] Drive object identification / DO identification			
All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the identification of the drive object.

Note:	Example: r0975[0] = 42 --> SIEMENS r0975[1] = 11 --> SERVO drive object type r0975[2] = 102 --> first part, firmware version V01.02 (second part, refer to index 10) r0975[3] = 2003 --> year 2003 r0975[4] = 1401 --> 14th of January r0975[5] = 1 --> PROFIdrive drive object, type class r0975[6] = 9 --> PROFIdrive drive object sub-type class 1 r0975[7] = 2 --> drive object number = 2 r0975[8] = 0 (reserved) r0975[9] = 0 (reserved) r0975[10] = 600 --> second part, firmware version (complete version: V01.02.06.00)		

p0976 Reset and load all parameters / Reset load all par			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(30), C2(30)	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Factory settings	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1013	0
Description:	Resets or downloads all parameters of the drive system.		
Value:	0: Inactive 1: Start reset of all parameters to factory setting 2: Start dnlod of param. saved in non-volatile mem w/ p0977=1 3: Start download of volatile parameters from RAM 10: Start dnlod of param. saved in non-volatile mem w/ p0977=10 11: Start dnlod of param. saved in non-volatile mem w/ p0977=11 12: Start dnlod of param. saved in non-volatile mem w/ p0977=12 20: Start load of param. saved in non-volatile mem w/ p0977=20 21: Start load of param. saved in non-volatile mem w/ p0977=21		

- 22: Start load of param. saved in non-volatile mem w/ p0977=22
- 23: Start load of param. saved in non-volatile mem w/ p0977=23
- 24: Start load of param. saved in non-volatile mem w/ p0977=24
- 25: Start load of param. saved in non-volatile mem w/ p0977=25
- 26: Start load of param. saved in non-volatile mem w/ p0977=26
- 30: Start loading the delivery state saved with p0977=30
- 100: Start resetting of all BICO interconnections
- 1011: Start dnlod of param. saved in volatile mem w/ p0977=1011
- 1012: Start dnlod of param. saved in volatile mem w/ p0977=1012
- 1013: Start dnlod of param. saved in volatile mem w/ p0977=1013

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: After all of the parameters have been reset to their factory setting, the system must be commissioned for the first time again.

Resetting or loading is realized in the non-volatile memory.

Procedure:

1. Set p0009 = 30 (parameter reset).

2. Set p0976 to "required value". The system is rebooted.

p0976 is automatically set to 0 and p0009 is automatically set to 1 after this has been carried out.

p0977

Save all parameters / Save all par

0

Description: Saves all parameters of the drive system to the non-volatile memory.

When saving, only the adjustable parameters intended to be saved are taken into account.

Value:

0: Inactive

1: Save in non-volatile memory - loaded at POWER ON

10: Save as opt. in non-vol. memory - loaded with p0976=10

11: Save as opt. in non-vol. memory - loaded with p0976=11

12: Save as opt. in non-vol. memory - loaded with p0976=12

20: Save as opt. in non-vol. memory - loaded with p0976=20

21: Save as opt. in non-vol. memory - loaded with p0976=21

22: Save as opt. in non-vol. memory - loaded with p0976=22

23: Save as opt. in non-vol. memory - loaded with p0976=23

24: Save as opt. in non-vol. memory - loaded with p0976=24

25: Save as opt. in non-vol. memory - loaded with p0976=25

26: Save as opt. in non-vol. memory - loaded with p0976=26

30: State when delivered, save in non-volatile memory as setting 30

80: Save in non-volatile memory time-optimized (reserved)

1011: Save in volatile memory, downloaded with p0976=1011

1012: Save in volatile memory, downloaded with p0976=1012

1013: Save in volatile memory, downloaded with p0976=1013

Dependency:

Refer to: p0976, p1960, p3845, r3996

Notice:

The Control Unit power supply may only be switched off after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).

Writing to parameters is inhibited while saving.

The progress while saving is displayed in r3996.

For p0977 = 30:

The original state when delivered is overwritten when executing this memory function.

Note:

Parameters saved with p0977 = 10, 11 or 12 can be downloaded again with p0976 = 10, 11 or 12.

The identification and maintenance data (I&M data, p8806 and following) are only saved for p0977 = 1.

p0978[0...n]	List of drive objects / List of the DO		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(1)	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Topology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	255	[0] 1 [1...24] 0
Description:	<p>This parameter is an image of p0101 in conformance with PROFIdrive. Parameters p0101 and p0978 contain the following information:</p> <ol style="list-style-type: none"> 1) The same number of drive objects 2) The same drive objects <p>In this sense, they are consistent. Difference between p0101 and p0978: p0978 can be re-sorted and a zero inserted in order to identify those drive objects that participate in the process data exchange and to define their sequence in the process data exchange. Drive objects that are listed after the first zero, are excluded from the process data exchange. For p0978, in addition, the value 255 can be inserted a multiple number of times. p0978[n] = 255 means: The drive object is visible for the PROFIBUS master and is empty (without any actual process data exchange). This allows cyclic communications of a PROFIBUS master with unchanged configuring to the drive units with a lower number of drive objects.</p>		
Dependency:	Refer to: p0101, p0971, p0977		
Note:	p0978 cannot be changed when the drive system is first commissioned. The reason for this is that at this time the actual topology has still not been acknowledged (p0099 is still not equal to r0098 and p0009 is set to 0).		

r0979[0...30]	PROFIdrive encoder format / PD encoder format		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the actual position encoder used according to PROFIdrive.		
Index:	<p>[0] = Header [1] = Type encoder 1 [2] = Resolution encoder 1 [3] = Shift factor G1_XIST1 [4] = Shift factor G1_XIST2 [5] = Distinguishable revolutions encoder 1 [6...10] = Reserved [11] = Type encoder 2 [12] = Resolution encoder 2 [13] = Shift factor G2_XIST1 [14] = Shift factor G2_XIST2 [15] = Distinguishable revolutions encoder 2 [16...20] = Reserved [21] = Type encoder 3 [22] = Resolution encoder 3 [23] = Shift factor G3_XIST1 [24] = Shift factor G3_XIST2 [25] = Distinguishable revolutions encoder 3 [26...30] = Reserved</p>

r0980[0...299]	List of existing parameters 1 / List avail par 1		
All objects	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the parameters that exist for this drive.		
Dependency:	Refer to: r0981, r0989		
Note:	Modified parameters are displayed in indices 0 to 298. If an index contains the value 0, then the list ends here. In a long list, index 299 contains the parameter number at which position the list continues. This list consists solely of the following parameters: r0980[0...299], r0981[0...299] ... r0989[0...299] The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).		

r0981[0...299] List of existing parameters 2 / List avail par 2			
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the parameters that exist for this drive.		
Dependency:	Refer to: r0980, r0989		
Note:	Modified parameters are displayed in indices 0 to 298. If an index contains the value 0, then the list ends here. In a long list, index 299 contains the parameter number at which position the list continues. This list consists solely of the following parameters: r0980[0...299], r0981[0...299] ... r0989[0...299] The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).		

r0989[0...299] List of existing parameters 10 / List avail par 10			
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the parameters that exist for this drive.		
Dependency:	Refer to: r0980, r0981		
Note:	Modified parameters are displayed in indices 0 to 298. If an index contains the value 0, then the list ends here. This list consists solely of the following parameters: r0980[0...299], r0981[0...299] ... r0989[0...299] The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).		

r0990[0...99] List of modified parameters 1 / List chang par 1			
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays those parameters with a value other than the factory setting for this drive.		
Dependency:	Refer to: r0991, r0999		
Note:	Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here. In a long list, index 99 contains the parameter number at which position the list continues. This list consists solely of the following parameters: r0990[0...99], r0991[0...99] ... r0999[0...99] The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).		

r0991[0...99] List of modified parameters 2 / List chang par 2			
All objects	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays those parameters with a value other than the factory setting for this drive.		
Dependency:	Refer to: r0990, r0999		
Note:	Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here. In a long list, index 99 contains the parameter number at which position the list continues. This list consists solely of the following parameters: r0990[0...99], r0991[0...99] ... r0999[0...99] The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).		
r0999[0...99] List of modified parameters 10 / List chang par 10			
All objects	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays those parameters with a value other than the factory setting for this drive.		
Dependency:	Refer to: r0990, r0991		
Note:	Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here. This list consists solely of the following parameters: r0990[0...99], r0991[0...99] ... r0999[0...99] The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).		
p1000[0...n] Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set			
VECTOR_G	Can be changed: C2(1), T Data type: Unsigned32 P-Group: Commands Not for motor type: - Min 0	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Runs the corresponding macro files. The Connector Inputs (CI) for the speed setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected. The selected macro file must be available on the memory card/device memory. Example: p1000 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0015, p0700, p1500, r8572		
Notice:	No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group! When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8572. r8572 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product. CI: Connector Input		

2 Parameters

2.2 List of parameters

p1001[0...n]	CO: Fixed speed setpoint 1 / n_set_fixed 1		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 1.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1002[0...n]	CO: Fixed speed setpoint 2 / n_set_fixed 2		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 2.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1003[0...n]	CO: Fixed speed setpoint 3 / n_set_fixed 3		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 3.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1004[0...n]	CO: Fixed speed setpoint 4 / n_set_fixed 4		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 4.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1005[0...n]	CO: Fixed speed setpoint 5 / n_set_fixed 5		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 5.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1006[0...n]	CO: Fixed speed setpoint 6 / n_set_fixed 6		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 6.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1007[0...n]	CO: Fixed speed setpoint 7 / n_set_fixed 7		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 7.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1008[0...n]	CO: Fixed speed setpoint 8 / n_set_fixed 8		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 8.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

2 Parameters

2.2 List of parameters

p1009[0...n]	CO: Fixed speed setpoint 9 / n_set_fixed 9		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 9.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1010[0...n]	CO: Fixed speed setpoint 10 / n_set_fixed 10		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 10.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		

p1011[0...n]	CO: Fixed speed setpoint 11 / n_set_fixed 11		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010

	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 13.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1014[0...n]	CO: Fixed speed setpoint 14 / n_set_fixed 14		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 14.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1015[0...n]	CO: Fixed speed setpoint 15 / n_set_fixed 15		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3010
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Setting and connector output for fixed speed setpoint 15.		
Dependency:	Refer to: p1020, p1021, p1022, p1023, r1024, r1197		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
p1020[0...n]	BI: Fixed speed setpoint selection Bit 0 / n_set_fixed Bit 0		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3010, 3011
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for selecting the fixed speed setpoint.		
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1021, p1022, p1023, r1197		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		

p1021[0...n]	BI: Fixed speed setpoint selection Bit 1 / n_set_fixed Bit 1		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3010, 3011
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for selecting the fixed speed setpoint.		
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1020, p1022, p1023, r1197		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		
p1022[0...n]	BI: Fixed speed setpoint selection Bit 2 / n_set_fixed Bit 2		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3010, 3011
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for selecting the fixed speed setpoint.		
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1020, p1021, p1023, r1197		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		
p1023[0...n]	BI: Fixed speed setpoint selection Bit 3 / n_set_fixed Bit 3		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3010, 3011
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for selecting the fixed speed setpoint.		
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1020, p1021, p1022, r1197		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		

r1024	CO: Fixed speed setpoint effective / n_set_fixed eff				
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 3010, 3011		
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505		
	Not for motor type: -	Scaling: p2000	Expert list: 1		
	Min	Max	Factory setting		
	- [rpm]	- [rpm]	- [rpm]		
Description:	Display and connector output for the selected and active fixed speed setpoint. This setpoint is the output value for the fixed speed setpoints and must be appropriately interconnected (e.g. with the main setpoint).				
Recommendation:	Interconnect the signal with the main setpoint (CI: p1070 = r1024).				
Dependency:	Selects the required fixed speed setpoint using p1020 ... p1023. Displays the number of the actual fixed speed setpoint in r1197. Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015. Refer to: p1070, r1197				
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).				
p1030[0...n]	Motorized potentiometer configuration / Mop configuration				
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 3020		
	P-Group: Setpoints	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0110 bin		
Description:	Sets the configuration for the motorized potentiometer.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Data save active	Yes	No	-
	01	Automatic mode ramp-function generator active	Yes	No	-
	02	Initial rounding-off active	Yes	No	-
	03	Non-volatile saving active	Yes	No	-
	04	Ramp-function generator always active	Yes	No	-
Notice:	The following prerequisites must be fulfilled in order to be able to save the setpoint (Bit 03 = 1) in a non-volatile fashion: - Firmware with V2.3 or higher. - Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).				
Note:	For bit 00: 0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p1040. 1: The setpoint for the motorized potentiometer is saved after OFF and after ON set to the saved value. In order to save in a non-volatile fashion, bit 03 should be set to 1. For bit 01: 0: Without ramp-function generator in the automatic mode (ramp-up/ramp-down time = 0). 1: With ramp-function generator in the automatic mode. For manual operation (0 signal via BI: p1041), the ramp-function generator is always active. For bit 02: 0: Without initial rounding-off 1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximum speed (p1082). It is calculated as follows: $r = 0.01 \% * p1082 [1/s] / 0.13^2 [s^2]$ The jerk acts up until the maximum acceleration is reached ($a_{max} = p1082 [1/s] / p1047 [s]$), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p1047 is), the longer the ramp-up time increases with respect to the set ramp-up time.				

2 Parameters

2.2 List of parameters

For bit 03:

0: Non-volatile data save deactivated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for bit 00 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r1050.

p1035[0...n]	BI: Motorized potentiometer setpoint raise / Mop raise		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to continually increase the setpoint for the motorized potentiometer. The setpoint change (CO: r1050) depends on the set ramp-up time (p1047) and the duration of the signal that is present (BI: p1035).		
Dependency:	Refer to: p1036		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p1036[0...n]	BI: Motorized potentiometer lower setpoint / Mop lower		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to continuously lower the setpoint for the motorized potentiometer. The setpoint change (CO: r1050) depends on the set ramp-down time (p1048) and the duration of the signal that is present (BI: p1036).		
Dependency:	Refer to: p1035		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p1037[0...n]	Motorized potentiometer maximum speed / MotP n_max		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets the maximum speed/velocity for the motorized potentiometer.		
Note:	This parameter is automatically pre-assigned in the commissioning phase. The setpoint output from the motorized potentiometer is limited to this value.		

p1038[0...n]	Motorized potentiometer minimum speed / MotP n_min		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -210000.000 [rpm]	Max 210000.000 [rpm]	Factory setting 0.000 [rpm]
Description:	Sets the minimum speed/velocity for the motorized potentiometer.		
Note:	This parameter is automatically pre-assigned in the commissioning phase. The setpoint output from the motorized potentiometer is limited to this value.		
p1039[0...n]	BI: Motorized potentiometer inversion / MotP inv		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0
Description:	Sets the signal source to invert the minimum speed/velocity or the maximum speed/velocity for the motorized potentiometer.		
Dependency:	Refer to: p1037, p1038		
Note:	The inversion is only active during "motorized potentiometer raise" or "motorized potentiometer lower".		
p1040[0...n]	Motorized potentiometer starting value / Mop start value		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -210000.000 [rpm]	Max 210000.000 [rpm]	Factory setting 0.000 [rpm]
Description:	Sets the starting value for the motorized potentiometer. This starting value becomes effective after the drive has been switched on.		
Dependency:	Only effective if p1030.0 = 0. Refer to: p1030		
p1041[0...n]	BI: Motorized potentiometer manual/automatic / Mop manual/auto		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0
Description:	Sets the signal source to change over from manual to automatic when using a motorized potentiometer. In the manual mode, the setpoint is changed using two signals - raise and lower. In the automatic mode, the setpoint must be interconnected via a connector input.		
Dependency:	Refer to: p1030, p1035, p1036, p1042		
Note:	The effectiveness of the internal ramp-function generator can be set in automatic mode.		

2 Parameters

2.2 List of parameters

p1042[0...n]	CI: Motorized potentiometer automatic setpoint / Mop auto setpoint		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the setpoint of the motorized potentiometer in the automatic mode.		
Dependency:	Refer to: p1041		
p1043[0...n]	BI: Motorized potentiometer accept setting value / MotP acc set val		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to accept the setting value for the motorized potentiometer.		
Dependency:	Refer to: p1044		
Note:	The setting value (CI: p1044) becomes effective for a 0/1 edge of the setting command (BI: p1043).		
p1044[0...n]	CI: Motorized potentiometer setting value / Mop set val		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the setting value for the motorized potentiometer.		
Dependency:	Refer to: p1043		
Note:	The setting value (CI: p1044) becomes effective for a 0/1 edge of the setting command (BI: p1043).		
r1045	CO: Mot. potentiometer speed setp. in front of ramp-fct. gen. / Mop n_set bef RFG		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3020
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Sets the effective setpoint in front of the internal motorized potentiometer ramp-function generator.		
p1047[0...n]	Motorized potentiometer ramp-up time / Mop ramp-up time		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	1000.000 [s]	10.000 [s]
Description:	Sets the ramp-up time for the internal ramp-function generator for the motorized potentiometer. The setpoint is changed from zero up to the speed/velocity limit (p1082) within this time (if no initial rounding-off has been activated).		
Dependency:	Refer to: p1030, p1048, p1082		

Note: When the initial rounding-off is activated (p1030.2) the ramp-up time is correspondingly extended.

p1048[0...n]	Motorized potentiometer ramp-down time / Mop ramp-down time		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3020
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	1000.000 [s]	10.000 [s]
Description:	Sets the ramp-down time for the internal ramp-function generator for the motorized potentiometer. The setpoint is changed from the speed/velocity limit (p1082) to zero within this time (if no initial rounding-off has been activated).		
Dependency:	Refer to: p1030, p1047, p1082		
Note:	The deceleration time is extended corresponding to the activated initial rounding-off (p1030.2).		

r1050	CO: Motorized potentiometer setpoint after ramp-function generator / Mop setp after RFG		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 3020
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Sets the effective setpoint after the internal motorized potentiometer ramp-function generator. This setpoint is the output value of the motorized potentiometer and must be appropriately interconnected onwards (e.g. with the main setpoint).		
Recommendation:	Interconnect the signal with main setpoint (p1070).		
Dependency:	Refer to: p1070		
Note:	For "With ramp-function generator", after an OFF1, OFF2, OFF3 or for a 0 signal via BI: p0852 (inhibit operation, suppress pulses) the ramp-function generator output (r1050) is set to the starting value (configuration via p1030.0).		

p1051[0...n]	CI: Speed limit RFG positive direction of rotation / n_limit RFG pos		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3050
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	1083[0]
Description:	Sets the signal source for the speed limit of the positive direction on the ramp-function generator input.		
Note:	The OFF3 ramp-down time (p1135) is effective when the limit is reduced.		

p1052[0...n]	CI: Speed limit RFG negative direction of rotation / n_limit RFG neg		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3050
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	1086[0]
Description:	Sets the signal source for the speed limit of the negative direction on the ramp-function generator input.		
Note:	The OFF3 ramp-down time (p1135) is effective when the limit is reduced.		

2 Parameters

2.2 List of parameters

p1055[0...n]	BI: Jog bit 0 / Jog bit 0		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 3030
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for jog 1.		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p0840, p1058		
Notice:	The drive is enabled for jogging using BI: p1055 or BI: p1056. The command "ON/OFF1" can be issued using BI: p0840 or using BI: p1055/p1056. Only the signal source that was used to switch on can also be used to switch off again.		
p1056[0...n]	BI: Jog bit 1 / Jog bit 1		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501, 3030
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for jog 2.		
Recommendation:	When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.		
Dependency:	Refer to: p0840, p1059		
Notice:	The drive is enabled for jogging using BI: p1055 or BI: p1056. The command "ON/OFF1" can be issued using BI: p0840 or using BI: p1055/p1056. Only the signal source that was used to switch on can also be used to switch off again.		
p1058[0...n]	Jog 1 speed setpoint / Jog 1 n_set		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3001, 3030
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets the speed for jog 1. Jogging (JOG) is level-triggered, and allows the motor to be incrementally traversed.		
Dependency:	Refer to: p1055, p1056		
p1059[0...n]	Jog 2 speed setpoint / Jog 2 n_set		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3001, 3030
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets the speed for jog 2. Jogging (JOG) is level-triggered, and allows the motor to be incrementally traversed.		
Dependency:	Refer to: p1055, p1056		

p1063[0...n]	Setpoint channel speed limit / Setp_chan n_lim		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3040
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	210000.000 [rpm]	40000.000 [rpm]
Description:	Sets the speed limit effective in the setpoint channel.		
Dependency:	Refer to: p1082, p1083, p1085, p1086, p1088		
p1070[0...n]	CI: Main setpoint / Main setpoint		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3001, 3030
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	1024[0]
Description:	Sets the signal source for the main setpoint. Examples: r1024: Fixed speed setpoint effective r1050: Motor. potentiometer setpoint after the ramp-function generator		
Dependency:	Refer to: p1071, r1073, r1078		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p1071[0...n]	CI: Main setpoint scaling / Main setp scal		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3001, 3030
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for scaling the main setpoint.		
r1073	CO: Main setpoint effective / Main setpoint eff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3030
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the effective main setpoint. The value shown is the main setpoint after scaling.		

p1075[0...n]	CI: Supplementary setp / Suppl setp		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3001, 3030
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the supplementary setpoint.		
Dependency:	Refer to: p1076, r1077, r1078		
p1076[0...n]	CI: Supplementary setpoint scaling / Suppl setp scal		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3001, 3030
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for scaling the supplementary setpoint.		
r1077	CO: Supplementary setpoint effective / Suppl setpoint eff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3030
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the effective supplementary setpoint. The value shown is the additional setpoint after scaling.		
r1078	CO: Total setpoint effective / Total setpoint eff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3030
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the total effective setpoint. The value indicates the sum of the effective main setpoint and supplementary setpoint.		
p1079	Interpolator clock cycle for speed setpoints / Interp_cyc n_set		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	127.00 [ms]	0.00 [ms]
Description:	Sets the time with which new speed setpoints are interpolated. With interpolation, the higher-level control adapts the speed setpoint steps to the time grid of the setpoint channel.		
Recommendation:	For non-synchronous operation, a setting to the maximum time difference between two setpoints is recommended. For sensorless vector control, interpolation should always be activated if the ramp-up and ramp-down times of the ramp-function generator are very short. The drive must be able to follow the external speed setpoint (the drive does not ramp up at the torque limit).		

Note: For acceleration precontrol of the speed controller, interpolation prevents torque peaks from occurring if the ramp-up or ramp-down times in the setpoint channel are zero.

When exiting commissioning, the parameter is preset using the automatic calculation if, as setpoint source for the main or supplementary setpoint, a PZD receive word is already set and the ramp-up time is zero.

Interpolation is limited to 127 cycles of the setpoint channel.

p1079 = 0 ms:
Interpolation is deactivated.

p1079 = 0.01 ms:
The interpolation time is automatically determined the first time that the speed setpoint is changed. After this, no other changes are made if the send times of the external control increase. Writing to p1079 again initiates the automatic adaptation of the interpolation time.

p1079 > 0.01 ms:
Interpolation is performed corresponding to the ratio to the computation clock cycle.

For a value of 0, for synchronized setpoint input, the currently valid application clock cycle is loaded.

p1080[0...n]	Minimum speed / n_min		
VECTOR_G	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3050
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	19500.000 [rpm]	0.000 [rpm]
Description:	Sets the lowest possible motor speed. This value is not undershot in operation.		
Dependency:	Refer to: p1106		
Notice:	The effective minimum speed is formed from p1080 and p1106.		
Note:	The parameter value applies for both motor directions. In exceptional cases, the motor can operate below this value (e.g. when reversing). In order that a stationary motor – after all of the enable signals have been switched on, can operate at the minimum speed/minimum velocity once all of the enable signals are available, the direction must be entered using one of the following options: - direction input via small setpoint. - direction input by inhibiting the negative or positive direction (p1110, p1111).		

p1081	Maximum speed scaling / n_max scal		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3050, 3095
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	100.00 [%]	105.00 [%]	100.00 [%]
Description:	Sets the scaling for the maximum speed (p1082). For a higher-level speed control, this scaling allows the maximum speed to be briefly exceeded.		
Dependency:	Refer to: p1082		
Notice:	Continuous operation above a scaling of 100 % is not permitted.		

p1082[0...n]	Maximum speed / n_max		
VECTOR_G	Can be changed: C2(1), T Data type: FloatingPoint32	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180	Access level: 1 Func. diagram: 2820, 3020, 3050, 3060, 3070, 3095
	P-Group: Setpoints Not for motor type: -	Unit group: 3_1 Scaling: -	Unit selection: p0505 Expert list: 1
	Min 0.000 [rpm]	Max 210000.000 [rpm]	Factory setting 1500.000 [rpm]
Description:	Sets the highest possible speed.		
Dependency:	For vector control (p1300 = 20 ... 23) the maximum speed is limited to $60.0 / (8.333 \times p0115[0] \times r0313)$. This can be identified by a reduction in r1084. p1082 is not changed in this process due to the fact that the operating mode p1300 can be changed over. If a sine-wave filter (p0230 = 3) is parameterized as output filter, then the maximum speed is limited corresponding to the maximum permissible filter output frequency (refer to the filter data sheet). When using sine-wave filters (p0230 = 3, 4), the maximum speed r1084 is limited to 70% of the resonant frequency of the filter capacitance and the motor leakage inductance. For reactors and dU/dt filters, it is limited to $150 \text{ Hz} \times 60 / r0313$ (for chassis power units) or $120 \text{ Hz} \times 60 / r0313$ (for booksize power units). Refer to: p0115, p0230, r0313, p0322, p0324, r0336, p0532		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	The parameter applies for both motor directions. The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer). Since the parameter is part of quick commissioning (p0010 = 1), it is defined appropriately when p0310, p0311, p0322, p0324, p0530, p0531, and p0532 are changed. $p1082 \leq \min(p0324, p0532)$ if $p0324 > 0$ and $p0532 > 0$ $p1082 \leq p0322$, if $p0324 = 0$ or $p0532 = 0$ and $p0322 > 0$ $p1082 \leq 60 \times \text{minimum}(15 \times r0336, 650 \text{ Hz}) / r0313$ $p1082 \leq 60 \times \text{Maximum power unit pulse frequency} / (k \times r0313)$ $k = 12$ for vector control ($r0108.2 = 1$), $k = 6.5$ for U/f control ($r0108.2 = 0$) For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value ($p0310 \times 60 / r0313$). For synchronous motors, the following additionally applies: The maximum speed p1082 is restricted to speeds (r1084) where the EMF does not exceed the DC link voltage. The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186. p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.		
p1083[0...n]	CO: Speed limit in positive direction of rotation / n_limit pos		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32	Calculated: - Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 3050, 6732

	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets skip speed 3.		
Dependency:	Refer to: p1091, p1092, p1094, p1101		
Notice:	Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.		

p1094[0...n]	Skip speed 4 / n_skip 4		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3050
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets skip speed 4.		
Dependency:	Refer to: p1091, p1092, p1093, p1101		
Notice:	Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.		

p1098[0...n]	CI: Skip speed scaling / n_skip scal		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3050
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for scaling the skip speeds.		
Dependency:	Refer to: p1091, p1092, p1093, p1094		

r1099.0	CO/BO: Skip band status word / Skip band ZSW			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Display and BICO output for the skip bands.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	r1170 within the skip band	Yes	No
				FP
				3050
Dependency:	Refer to: r1170			
Note:	For bit 00: With the bit set, the setpoint speed is within the skip band after the ramp-function generator (r1170). The signal can be used to switch over the drive data set (DDS).			

p1101[0...n]	Skip speed bandwidth / n_skip bandwidth		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3050
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]
Description:	Sets the bandwidth for the skip speeds/velocities 1 to 4.		
Dependency:	Refer to: p1091, p1092, p1093, p1094		
Note:	The setpoint (reference) speeds are skipped (suppressed) in the range of the skip speed +/-p1101. Steady-state operation is not possible in the skipped (suppressed) speed range. The skip (suppression) range is skipped. Example: p1091 = 600 and p1101 = 20 --> setpoint speeds between 580 and 620 [rpm] are skipped. For the skip bandwidths, the following hysteresis behavior applies: For a setpoint speed coming from below, the following applies: r1170 < 580 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm] --> r1119 = 580 [rpm] For a setpoint speed coming from above, the following applies: r1170 > 620 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm] --> r1119 = 620 [rpm]

2.2 List of parameters

p1106[0...n]	CI: Minimum speed signal source / n_min s_src		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3050
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for lowest possible motor speed.		
Dependency:	Refer to: p1080		
Notice:	The effective minimum speed is formed from p1080 and p1106.		
p1110[0...n]	BI: Inhibit negative direction / Inhib neg dir		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3040
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to disable the negative direction.		
Dependency:	Refer to: p1111		
p1111[0...n]	BI: Inhibit positive direction / Inhib pos dir		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505, 3040
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to disable the positive direction.		
Dependency:	Refer to: p1110		
r1112	CO: Speed setpoint after minimum limiting / n_set aft min_lim		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3050
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the speed setpoint after the minimum limiting.		
Dependency:	Refer to: p1091, p1092, p1093, p1094, p1101		
p1113[0...n]	BI: Setpoint inversion / Setp inv		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2441, 2442, 2505, 3040
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to invert the setpoint.		
Dependency:	Refer to: r1198		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

r1114	CO: Setpoint after the direction limiting / Setp after limit		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 3001, 3040, 3050
	P-Group: Setpoints Not for motor type: -	Unit group: 3_1 Scaling: p2000	Unit selection: p0505 Expert list: 1
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]
Description:	Displays the speed/velocity setpoint after the changeover and limiting the direction.		
p1115	Ramp-function generator selection / RFG selection		
VECTOR_G	Can be changed: T Data type: Integer16	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 3001, 3080
	P-Group: Setpoints Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0	Max 1	Factory setting 0
Description:	Sets the ramp-function generator type.		
Value:	0: Basic ramp-function generator 1: Extended ramp-function generator		
Note:	Another ramp-function generator type can only be selected when the motor is at a standstill.		
r1119	CO: Ramp-function generator setpoint at the input / RFG setp at inp		
VECTOR_G	Can be changed: - Data type: FloatingPoint32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 3001, 3050, 3060, 3070, 6300
	P-Group: Setpoints Not for motor type: -	Unit group: 3_1 Scaling: p2000	Unit selection: p0505 Expert list: 1
	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]
Description:	Displays the setpoint at the input of the ramp-function generator.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The setpoint is influenced by other functions, e.g. skip (suppressed) speeds, minimum and maximum limits.		
p1120[0...n]	Ramp-function generator ramp-up time / RFG ramp-up time		
VECTOR_G	Can be changed: C2(1), U, T Data type: FloatingPoint32	Calculated: - Dyn. index: DDS, p0180	Access level: 1 Func. diagram: 3060, 3070
	P-Group: Setpoints Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.000 [s]	Max 999999.000 [s]	Factory setting 10.000 [s]
Description:	The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.		
Dependency:	Refer to: p1082, p1138		
Note:	The ramp-up time can be scaled via connector input p1138. The parameter is adapted during the rotating measurement (p1960 > 0). This is the reason that during the rotating measurement, the motor can accelerate faster than was originally parameterized. For U/f control and sensorless vector control (see p1300), a ramp-up time of 0 s does not make sense. The setting should be based on the startup times (r0345) of the motor.		

p1121[0...n]	Ramp-function generator ramp-down time / RFG ramp-down time		
VECTOR_G	Can be changed: C2(1), U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	Sets the ramp-down time for the ramp-function generator. The ramp-function generator ramps-down the speed setpoint from the maximum speed (p1082) down to standstill (setpoint = 0) in this time. Further, the ramp-down time is always effective for OFF1.		
Dependency:	Refer to: p1082, p1139		
Note:	For U/f control and sensorless vector control (see p1300), a ramp-down time of 0 s does not make sense. The setting should be based on the startup times (r0345) of the motor.		
p1122[0...n]	BI: Bypass ramp-function generator / Bypass RFG		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2505
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for bypassing the ramp generator (ramp-up and ramp-down times = 0).		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed. The bypass is kept for OFF1/OFF3.		
Note:	For VECTOR in encoderless operation, it is not permissible that the ramp-function generator is bypassed.		
p1130[0...n]	Ramp-function generator initial rounding-off time / RFG t_start_round		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	30.000 [s]	0.000 [s]
Description:	Sets the initial rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.		
Note:	Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.		
p1131[0...n]	Ramp-function generator final rounding-off time / RFG t_end_delay		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	30.000 [s]	0.000 [s]
Description:	Sets the final rounding-off time for the extended ramp generator. The value applies to ramp-up and ramp-down.		
Note:	Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.		

p1134[0...n]	Ramp-function generator rounding-off type / RFG round-off type		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the smoothed response to the OFF1 command or the reduced setpoint for the extended ramp-function generator.		
Value:	0: Continuous smoothing 1: Discontinuous smoothing		
Dependency:	No effect up to initial rounding-off time (p1130) > 0 s.		
Note:	p1134 = 0 (continuous smoothing) If the setpoint is reduced while ramping-up, initially a final rounding-off is carried out and then the ramp-up completed. During the final rounding-off, the output of the ramp-function generator continues to go in the direction of the previous setpoint (overshoot). After the final rounding-off has been completed, the output goes toward the new setpoint. p1134 = 1 (discontinuous smoothing) If the setpoint is reduced while ramping-up, then the output goes immediately in the direction of the new setpoint. For the setpoint change there is no rounding-off.		
p1135[0...n]	OFF3 ramp-down time / OFF3 t_RD		
VECTOR_G	Can be changed: C2(1), U, T	Calculated: -	Access level: 2

	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for scaling the ramp-up time of the ramp-function generator.		
Dependency:	Refer to: p1120		
Note:	The ramp-up time is set in p1120.		

p1139[0...n]	CI: Ramp-function generator ramp-down time scaling / RFG t_{RD} scal		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for scaling the ramp-down time of the ramp-function generator.		
Dependency:	Refer to: p1121		
Note:	The ramp-down time is set in p1121.		

p1140[0...n]	BI: Enable ramp-function generator/inhibit ramp-function generator / Enable RFG		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "enable ramp-function generator/inhibit ramp-function generator". For the PROFIdrive profile, this command corresponds to control word 1 bit 4 (STW1.4). BI: p1140 = 0 signal: Inhibits the ramp-function generator (the ramp-function generator output is set to zero). BI: p1140 = 1 signal: Enable ramp-function generator.		
Dependency:	Refer to: p1141, p1142		
Caution:	When "master control from PC" is activated, this binector input is ineffective.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p1141[0...n]	BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2501
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the command "continue ramp-function generator/freeze ramp-function generator". For the PROFIdrive profile, this command corresponds to control word 1 bit 5 (STW1.5). BI: p1141 = 0 signal: Freezes the ramp-function generator.		

BI: p1141 = 1 signal:
Continue ramp-function generator.

Dependency:

Refer to: p1140, p1142

Caution:

When "master control from PC" is activated, this binector input is ineffective.

**Notice:**

The ramp-function generator is, independent of the state of the signal source, active in the following cases:
- OFF1/OFF3.
- ramp-function generator output within the suppression bandwidth.
- ramp-function generator output below the minimum speed.

0

Description:

Sets the signal source for accepting the setting value of the ramp-function generator.

Dependency:

The signal source for the ramp-function generator setting value is set using parameters.

Refer to: p1144

Note:

0/1 signal:

The ramp-function generator output is immediately (without delay) set to the setting value of the ramp-function generator.

1 signal:

The setting value of the ramp-function generator is effective.

1/0 signal:

The input value of the ramp-function generator is effective. The ramp-function generator output is adapted to the input value using the ramp-up time or the ramp-down time.

0 signal:

The input value of the ramp-function generator is effective.

p1144[0...n]	CI: Ramp-function generator setting value / RFG setting value		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the ramp-function generator setting value.		
Dependency:	The signal source for accepting the setting value is set using parameters. Refer to: p1143		

p1145[0...n]	Ramp-function generator tracking intensity. / RFG track intens		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3080
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	50.0	1.3
Description:	Sets the ramp-function generator tracking. The output value of the ramp-function generator is tracked (corrected) corresponding to the maximum possible drive acceleration. The reference value is the deviation at the speed/velocity controller input that is necessary to ensure that the motor accelerates at the torque/force limit.		
Recommendation:	If at least one speed setpoint filter/velocity setpoint filter is activated (p1414), then the ramp-function generator tracking should be deactivated (p1145 = 0.0). When the speed setpoint filter is activated, the output value of the ramp-function generator can no longer be tracked (corrected) corresponding to the maximum possible drive acceleration. For p1145 = 0.0: This value deactivates the ramp-function generator tracking. For p1145 = 0.0 ... 1.0: Generally, these values are not practical. They cause the motor to accelerate below its torque limit. The lower the selected value, the greater the margin between the controller and torque limit when accelerating. For p1145 > 1.0: The greater the value, the higher the permissible deviation between the speed setpoint and speed actual value.		
Notice:	If ramp-function generator tracking is activated and the ramp time is set too short, this can cause unsteady acceleration. Remedy: - deactivate ramp-function generator tracking (p1145 = 0). - increase the ramp-up/ramp-down time (p1120, p1121).		
Note:	In the U/f mode, ramp-function generator tracking is not active. For ramp-function generator tracking and active acceleration model (p1400.20, 23), the integral component of the speed controller should be able to run freely up to the torque limit (p1400.16 = 1).		

p1148[0...n]	Ramp-function gen. tolerance for ramp-up and ramp-down active / RFG tol HL/RL act		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 3060, 3070
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [rpm]	1000.000 [rpm]	19.800 [rpm]
Description:	Sets the tolerance value for the status of the ramp-function generator (ramp-up active, ramp-down active). If the input of the ramp-function generator does not change in comparison to the output by more than the entered tolerance time, then the status bits "ramp-up active" and "ramp-down active" are not influenced.		
Dependency:	Refer to: r1199		

r1149	CO: Ramp-function generator acceleration / RFG acceleration

VECTOR_G	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 3080	
	P-Group: Setpoints	Unit group: 3_1	Unit selection: p0505	
	Not for motor type: -	Scaling: p2000	Expert list: 1	
	Min	Max	Factory setting	
	- [rpm]	- [rpm]	- [rpm]	
Description:	Displays the setpoint at the output of the ramp-function generator.			
p1151[0...n]	Ramp-function generator configuration / RFG config			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Setpoints	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Sets the configuration for the extended ramp-function generator.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Deactivate rounding-off at the zero cross-over	Yes	No
	01	RFG tracking without polarity change	Yes	No
	02	RFG tracking with polarity change	Yes	No
Dependency:	For bit 01, 02 = 1: These bits are only effective when ramp-function generator tracking is activated (p1145 > 0). When both bits are activated, RFG tracking with polarity change is active. For bit 01 = 0, bit 02 = 0: When ramp-function generator tracking is active, the setpoint can only change in the direction of the target setpoint – or be frozen.			
Notice:	For bit 00 = 1: If the ramp-up time is longer than the ramp-down time (p1120 > p1121), then there is an acceleration step at the zero crossover. This can have a negative impact on the mechanical system.			
Note:	For bit 00 = 1: When the direction change is changed there is no rounding-off before and after the zero crossover. For bit 01 = 1: For load surges, the ramp-function generator output tracks the actual value. The tracking (correction) ends at a setpoint of zero. For bit 02 = 1: For load surges, the ramp-function generator output tracks the actual value. For a polarity change, the tracking (correction) is continued.			

2 Parameters

2.2 List of parameters

p1152	BI: Setpoint 2 enable / Setp 2 enab		
VECTOR_G (Ext brake)	Can be changed: T	Calculated: -	Access level: 3

	Min - [rpm]	Max - [rpm]	Factory setting - [rpm]
Description:	Display and connector output for the speed setpoint after selecting the ramp-function generator. The value is the sum of speed setpoint 1 (p1155) and speed setpoint 2 (p1160).		
Dependency:	Refer to: r1150, p1155, p1160		

p1189[0...n]	Speed setpoint configuration / n_ctrl config				
VECTOR_G	Can be changed: U, T Data type: Unsigned16	Calculated: - Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 3080		
	P-Group: Setpoints Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1		
	Min -	Max -	Factory setting 0011 bin		
Description:	Sets the configuration for the speed setpoint.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Interpolation ramp-fct gen/speed controller active	Yes	No	3080
	01	Interpol. op-loop ctrl /speed controller active	Yes	No	3080
Note:	For bit 01: The interpolator is only effective in following cases: - isochronous PROFIBUS operation with a sign-of-life received from the master (STW2.12 ... STW2.15).				

r1197	Fixed speed setpoint number actual / n_set_fixed No act		
VECTOR_G	Can be changed: - Data type: Unsigned32	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 3010
	P-Group: Setpoints Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays the number of the selected fixed speed/velocity setpoint.		
Dependency:	Refer to: p1020, p1021, p1022, p1023		
Note:	If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).		

r1198.0...15	CO/BO: Control word setpoint channel / STW setpoint chan				
VECTOR_G	Can be changed: - Data type: Unsigned16	Calculated: - Dyn. index: -	Access level: 3 Func. diagram: 2505		
	P-Group: Setpoints Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1		
	Min -	Max -	Factory setting -		
Description:	Display and BICO output for the control word of the setpoint channel.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fixed setpoint bit 0	Yes	No	3010
	01	Fixed setpoint bit 1	Yes	No	3010
	02	Fixed setpoint bit 2	Yes	No	3010
	03	Fixed setpoint bit 3	Yes	No	3010
	05	Inhibit negative direction	Yes	No	3040

2 Parameters

2.2 List of parameters

06	Inhibit positive direction	Yes	No	3040
11	Setpoint inversion	Yes	No	3040
13	Motorized potentiometer raise	Yes	No	3020
14	Motorized potentiometer lower	Yes	No	3020
15	Bypass ramp-function generator	Yes	No	3060, 3070

r1199.0...8 CO/BO: Ramp-function generator status word / RFG ZSW

VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 3001, 3080
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word for the ramp-function generator (RFG).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ramp-up active	Yes	No	-
	01	Ramp-down active	Yes	No	-
	02	RFG active	Yes	No	-
	03	Ramp-function generator set	Yes	No	-
	04	Ramp-function generator held	Yes	No	-
	05	Ramp-function generator tracking active	Yes	No	-
	06	Maximum limit active	Yes	No	-
	07	Ramp-function generator acceleration positive	Yes	No	-
	08	Ramp-function generator acceleration negative	Yes	No	-

Note: For bit 02:
The bit is the result of the OR logic operation - bit 00 and bit 01.

p1200[0...n] Flying restart operating mode / FlyRest op_mode

VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0

Description: Sets the operating mode for flying restart.

The flying restart allows the drive converter to be switched on while the motor is still rotating. In so doing, the drive converter output frequency is changed until the actual motor speed/velocity is found. The motor then accelerates up to the setpoint at the ramp-function generator setting.

Value:

0:	Flying restart inactive
1:	Flying restart always active (start in setpoint direction)
2:	FlyRestart active after on, fault, OFF2 (start in setp. dir.)
3:	FlyRestart active after fault, OFF2 (start in setp. direction)
4:	Flying restart always active (start only in setpoint direction)
5:	FlyRestart active after on, fault, OFF2 (start only in setp_dir)
6:	FlyRestart active after fault, OFF2 (start only in setp. dir.)

Dependency: The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated (p1200 = 0).

For induction motors, the following applies:

A differentiation is made between flying restart for U/f control and for vector control (p1300).

Flying restart, U/f control: p1202, p1203, r1204

Flying restart, vector control: p1202, p1203, r1205

For synchronous motors, the following applies:

Flying restart is not possible with U/f control or if, in the case of sensorless vector control, a Voltage Sensing Module (VSM) has not been connected and parameterized.

If two VSMs are connected to the Motor Module, then the motor voltage for the flying restart is measured using the second VSM (see p0151[1]).

If only one VSM is connected, then this can be used for the flying restart (p1200) (for induction motors, also see p0247 bit 5). When activating flying restart, line synchronization must be deactivated (p3800 = 0).

Refer to: p1201

Refer to: F07330, F07331

Notice: The "flying restart" function must be used in cases where the motor may still be running (e.g. after a brief line supply interruption) or is being driven by the load. The system might otherwise shut down as a result of overcurrent.

It does not make sense to use "flying restart" together with the "motor holding brake function" (p1215 > 0) because then the flying restart will always be realized with the motor stationary.

For a flying restart of induction motors without voltage measurement (VSM) the de-energization time (p0347) must be set long enough so that for fast restarts after a pulse inhibit, excessively high current peaks do not occur.

When operating synchronous reluctance motors and flying restart a motor data identification must first be carried out.

Note: For p1200 = 1, 4, the following applies:

Flying restart is active after faults, OFF1, OFF2, OFF3.

For p1200 = 2, 5, the following applies:

The "switch-on" is the first switching-on operation after the drive system has been booted. This is practical for motors with a high-inertia load.

For p1200 = 1, 2, 3, the following applies: The search is made in both directions.

For reluctance motors, the converter is directly switched to the rotating motor without executing a search routine.

For p1200 = 4, 5, 6, the following applies: The search is only made in the setpoint direction. For a setpoint of zero, a search is not made in the negative direction of rotation.

This selection is not necessary for reluctance motors (see p1200 = 1, 2, 3).

For operation with encoder, the following applies:

p1200 = 1, 4 as well as p1200 = 2, 5 and p1200 = 3, 6 have the same meaning.

For U/f control (p1300 < 20), the following applies:

The speed can only be sensed for values above approx. 5 % of the rated motor speed. For lower speeds, it is assumed that the motor is at a standstill.

If p1200 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1200 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1201[0...n]	BI: Flying restart enable signal source / Fly_res enab S_src		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -

	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source to enable the "flying restart" function.		
Dependency:	Refer to: p1200		
Note:	Withdrawing the enable signal has the same effect as setting p1200 = 0.		

p1202[0...n]	Flying restart search current / FlyRest I_srch		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	400 [%]	100 [%]
Description:	Sets the search current for the "flying restart" function. The value is referred to the motor magnetizing current. For U/f control, it may be necessary to increase the search current (e.g. 120 %) to ensure reliable flying restart. Fast flying restart for induction motors with voltage model (see r1780.11): Sets the initial setpoint for the field-generating current component.		
Dependency:	Refer to: r0331		

2 Parameters

2.2 List of parameters

Caution:

An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

Note:

In U/f control mode, the parameter serves as a threshold value for establishing the current at the beginning of the flying restart function. When the threshold value is reached, the actual search current is set as a function of the frequency based on the voltage setpoints.

Reducing the search current can also improve flying restart performance (if the system moment of inertia is not very high, for example).

The following applies for a synchronous reluctance motor:

- a parameter change only becomes effective after carrying out the motor data identification.
- the minimum search current is limited (p1202 >= 50 %).
- the search algorithm is optimized for 100%, and the current reached is internally limited. It is possible that a set value (p1202 != 100%) may not be able to be reached.
- if the ratio between motor power and converter power is greater than 1, then it may be advantageous to increase the search current.

p1203[0...n]

Flying restart search rate factor / FlyRst v_Srch Fact

VECTOR_G

Can be changed: U, T

Access level: 3

Data type: FloatingPoint32

Dyn. index: DDS, p0180

Func. diagram: -

P-Group: Functions

Unit group: -

Unit selection: -

Not for motor type: PMSM, REL

Scaling: -

Expert list: 1

Min

Max

Factory setting

10 [%]

4000 [%]

100 [%]

Description:

Sets the factor for the search speed for flying restart.

The value influences the rate at which the output frequency is changed during a flying restart. A higher value results in a longer search time.

Recommendation:

For sensorless vector control and motor cables longer than 200 m - as well as for du/dt filters (p0230) - the following applies:

p1203 >= 300 %

Caution:

An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

Note:

The parameter factory setting is selected so that standard induction motors that are rotating can be found and restarted as quickly as possible (fast flying restart).

With this pre-setting, if the motor is not found (e.g. for motors that are accelerated as a result of active loads or with U/f control and low speeds), we recommend that the search rate is reduced (by increasing p1203).

For a fast flying restart with voltage model in the U/f control mode (p1300 < 20) the search duration can be modified using this parameter.

The following applies for a synchronous reluctance motor:

- the minimum search speed is limited (p1203 >= 50 %).

p1210		Automatic restart mode / AR mode		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	16	0	
Description:	Sets the automatic restart mode (AR).			
Value:	0: Inhibit automatic restart 1: Acknowledge all faults without restarting 4: Restart after line supply failure w/o additional start attempts 6: Restart after fault with additional start attempts 14: Restart after line supply failure following man. acknowledgment 16: Restart after fault following manual acknowledgment			
Recommendation:	For brief line supply failures, the motor shaft may still be rotating when restarting. The "flying restart" function (p1200) might need to be activated to restart while the motor shaft is still rotating.			
Dependency:	The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted. When using an Operator Panel in the LOCAL mode, then there is no automatic start. For p1210 = 14, 16, a manual acknowledgment is required for an automatic restart. Refer to: p0840, p0857, p1267 Refer to: F30003			
Danger:	 If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.			
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). When faults are present, therefore, the parameter cannot be changed. For p1210 > 1, the motor is automatically started.			
Note:	For p1210 = 1: Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. p1211 has no influence on the number of acknowledgment attempts. For p1210 = 4: An automatic restart is only carried out if fault F30003 occurred at the Motor Module or a 1 signal is present at binector input p1208[1]. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure. For p1210 = 6: An automatic restart is carried out if any fault has occurred or there is a 1 signal at binector input p1208[0]. For p1210 = 14: as for p1210 = 4. However, active faults must be manually acknowledged. For p1210 = 16: as for p1210 = 6. However, active faults must be manually acknowledged.			

p1210		Automatic restart mode / AR mode		
B_INF	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	6	0	
Description:	Sets the automatic restart mode (AR).			
Value:	0: Inhibit automatic restart 1: Acknowledge all faults without restarting 6: Restart after fault with additional start attempts			

2 Parameters

2.2 List of parameters

Dependency: The automatic restart requires an active ON command (e.g., via a digital input). If, for $p1210 > 1$, there is no active ON command, then the automatic restart is interrupted.
When using an Advanced Operator Panel (AOP) in the LOCAL Mode, then there is no automatic restart.
Refer to: p0840, p0857, p1267
Refer to: F30003

Danger:  If the automatic restart is activated ($p1210 > 1$) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).
For $p1210 > 1$, the infeed is automatically started.

Note: For $p1210 = 1$:
Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. A minimum time of $p1212 + 1$ s must expire between a successful fault acknowledgment and a fault re-occurring if the signal ON/OFF1 (STW1.0) is at a HIGH signal level. If the signal ON/OFF1 is at a LOW signal level, then the time between a successful fault acknowledgment and a new fault must be at least 1 s. $p1211$ has no influence on the number of acknowledgment attempts.
For $p1210 = 6$:
An automatic restart is carried out if any fault has occurred.

p1211 Automatic restart start attempts / AR start attempts

VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10	3

Description: Sets the start attempts of the automatic restart function for $p1210 = 4, 6$.

Dependency: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).
Refer to: p1210, r1214
Refer to: F07320

Notice: After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.
After a complete power failure (blackout) the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. if the Control Unit remains active on power failure longer than the time $p1212/2$, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.

Note: A start attempt starts immediately when a fault occurs. The start attempt is considered to be completed if the motor was magnetized ($r0056.4 = 1$) and an additional delay time of 1 s has expired.
As long as a fault is present, an acknowledge command is generated in the time intervals of $p1212 / 2$. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgment starts again from the beginning.
Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt, i.e. a fault/error has no longer occurred up to the end of the magnetizing phase, the start counter is again reset to the parameter value after 1 s. If a fault re-occurs - the parameterized number of start attempts is again available.
At least one start attempt is always carried out.
After a line supply failure, acknowledgment is immediate and when the line supply returns, the system is switched on. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgment also causes the start counter to be decremented.

p1211 Automatic restart start attempts / AR start attempts			
B_INF	Can be changed: U, T Data type: Unsigned16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 3
Description:	Sets the start attempts of the automatic restart function for p1210 = 4, 6.		
Dependency:	This parameter setting is active for p1210 = 6. For p1210 = 4, the parameter only has an influence if, when attempting to start, an additional line phase failure (F06200) occurs. A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). Refer to: p1210, r1214 Refer to: F07320		
Notice:	After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated. After a complete power failure (blackout) the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. if the Control Unit remains active on power failure longer than the time p1212/2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.		
Note:	A start attempt starts immediately when a fault occurs. The restart attempt is considered to have been completed if the infeed is switched on and an additional delay time of 1 s has expired. As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgment starts again from the beginning. Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt (i.e. a fault/error has no longer occurred up to the end of the switching-on operation) the start counter is again reset to the parameter value after 1 s. If faults re-occur, the parameterized number of start attempts is again available. At least one start attempt is always carried out. After a line supply failure, acknowledgment is immediate and when the line supply returns, the system is switched on. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgment also causes the start counter to be decremented.		

p1212 Automatic restart delay time start attempts / AR t_wait start			
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.1 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.0 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.0 [s]
Description:	Sets the delay time up to restart.		
Dependency:	This parameter setting is active for p1210 = 4, 6. For p1210 = 1, the following applies: Faults are only automatically acknowledged in half of the waiting time, no restart. Refer to: p1210, r1214		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).		
Note:	The faults are automatically acknowledged after half of the delay time has expired and the full delay time. If the cause of a fault is not removed in the first half of the delay time, then it is no longer possible to acknowledge in the delay time.		

p1212	Automatic restart delay time start attempts / AR t_wait start		
B_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.1 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000.0 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.0 [s]
Description:	Sets the delay time up to restart.		
Dependency:	This parameter setting is active for p1210 = 4, 6. For p1210 = 1, the following applies: Only automatic acknowledgment of the faults, no restart. Refer to: p1210, r1214		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).		
Note:	Faults are automatically acknowledged and the drive switched on again after half and the complete wait time have expired.		
p1213[0...1]	Automatic restart monitoring time / AR t_monit		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 10000.0 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [s]
Description:	Sets the monitoring time of the automatic restart (AR).		
Index:	[0] = Restart [1] = Reset start counter		
Dependency:	Refer to: p1210, r1214		
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.		
Note:	For index [0]: The monitoring time starts when the faults are detected. If the automatic acknowledgments are not successful, the monitoring time runs again. If, after the monitoring time has expired, the drive has still not successfully started again (flying restart and magnetizing of the motor must have been completed: r0056.4 = 1), then fault F07320 is output. The monitoring is deactivated with p1213 = 0. If p1213 is set lower than the sum of p1212, the magnetizing time p0346 and the additional delay time due to the flying restart, then fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart. The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present). In the case of p1210 = 14, 16, the faults which are present must be acknowledged manually within the time in p1213[0]. Otherwise, fault F07320 is generated after the set time. For index [1]: The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgment without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the switch-on command is withdrawn and the fault is acknowledged. The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.		

p1213[0...1]		Automatic restart monitoring time / AR t_monit

	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [s]	10000.0 [s]	0.0 [s]	
Description:	Sets the monitoring time of the automatic restart (AR).			
Index:	[0] = Restart [1] = Reset start counter			
Dependency:	Refer to: p1210, r1214			
Notice:	A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.			
Note:	For index [0]: The monitoring time starts when the faults are detected. If the automatic acknowledgments are not successful, the monitoring time runs again. If the drive has not restarted at the end of the monitoring time, fault F07320 is signaled. The monitoring is deactivated with p1213 = 0. If p1213 is set to a value which is lower than in p1212, fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart. The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present). For index [1]: The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgment without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the switch-on command is withdrawn and the fault is acknowledged. The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.			

r1214.0...15		CO/BO: Automatic restart status / AR status			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Functions	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status of the automatic restart (AR).				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Initialization	Yes	No	-
	01	Wait for alarm	Yes	No	-
	02	Auto restart act	Yes	No	-
	03	Setting the acknowledgment command	Yes	No	-
	04	Acknowledge alarms	Yes	No	-
	05	Restart	Yes	No	-
	06	Delay time running after automatic switch-on	Yes	No	-
	07	Fault	Yes	No	-
	10	Effective fault	Yes	No	-
	12	Start counter bit 0	ON	OFF	-
	13	Start counter bit 1	ON	OFF	-
	14	Start counter bit 2	ON	OFF	-
	15	Start counter bit 3	ON	OFF	-
Note:	For bit 00: State to display the single initialization after POWER ON. For bit 01: State in which the automatic restart function waits for faults (initial state).				

For bit 02:

General display that a fault has been identified and that the restart or acknowledgment has been initiated.

For bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

For bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgment. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgment command (bit 3 = 1).

For bit 05:

State in which the drive is automatically switched on (only for p1210 = 4, 6).

For bit 06:

State in which the system waits after having been switched on, to the end of the start attempt (to the end of the magnetizing process).

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

For bit 07:

State which is assumed after a fault occurs within the automatic restart function. This is only reset after acknowledging the fault and withdrawing the switch-on command.

For bit 10:

When the automatic restart function is active, r1214.7 is displayed, otherwise the active fault r2139.3.

The bit is set if the automatic restart can no longer acknowledge a fault, and cancels with fault F07320.

For bits 12 ... 15:

Actual state of the start counter (binary coded).

13	Start counter bit 1	ON	OFF	-
14	Start counter bit 2	ON	OFF	-
15	Start counter bit 3	ON	OFF	-

Note:

For bit 00:

State to display the single initialization after POWER ON.

For bit 01:

State in which the automatic restart function waits for faults (initial state).

For bit 02:

General display that a fault has been identified and that the restart or acknowledgment has been initiated.

For bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

For bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgment. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgment command (bit 3 = 1).

For bit 05:

State in which the drive is automatically switched on (only for p1210 = 4, 6).

For bit 06:

State in which the system waits after having been switched on, to the end of the start attempt.

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

For bit 07:

State which is assumed after a fault occurs within the automatic restart function.

For bit 10:

When the automatic restart function is active, r1214.7 is displayed, otherwise the active fault r2139.3.

The bit is set if the automatic restart can no longer acknowledge a fault, and cancels with fault F07320.

For bits 12 ... 15:

Actual state of the start counter (binary coded).

p1215 Motor holding brake configuration / Brake config			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 2701, 2707, 2711
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the holding brake configuration.		
Value:	0: No motor holding brake available 1: Motor holding brake acc. to sequence control 2: Motor holding brake always open 3: Motor holding brake like sequence control connection via BICO		
Dependency:	Refer to: p1216, p1217, p1226, p1227, p1228, p1278		
Caution:	For the setting p1215 = 0, if a brake is used, it remains closed. If the motor moves, this will destroy the brake.		
			
Notice:	If p1215 was set to 1 or if p1215 was set to 3, then when the pulses are suppressed, the brake is closed even if the motor is still rotating. Pulse suppression can either be caused by a 0 signal at p0844, p0845 or p0852 or as a result of a fault with OFF2 response. If this is not desirable (e.g. for a flying restart), then the brake can be kept open using a 1 signal at p0855.		
Note:	If the configuration is set to "no holding brake present" when booting, then the motor holding brake will be automatically identified. If a motor holding brake is detected, the configuration is set to "motor holding brake as for sequence control". If a motor holding brake is used via the brake connection of the Motor Module integrated in the drive, then it is not permissible that p1215 is set to 3. if an external motor holding brake is being used, then p1215 should be set to 3 and r0899.12 should be interconnected as control signal. When the function module "extended brake control" is activated (r0108.14 = 1), r1229.1 should be interconnected as control signal. The parameter can only be set to zero when the pulses are inhibited. The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = 1, p9802 = 1) is not practical if there is no motor holding brake. The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.		

p1216	Motor holding brake opening time / Brake t_{open}		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2701, 2711
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	100 [ms]
Description:	Sets the time to open the motor holding brake. After controlling the holding brake (opens), the speed/velocity setpoint remains at zero for this time. After this, the speed/velocity setpoint is enabled.		
Recommendation:	This time should be set longer than the actual opening time of the brake. This ensures that the drive cannot accelerate when the brake is applied.		
Dependency:	Refer to: p1215, p1217		
Note:	For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor. For p1216 = 0 ms, the monitoring and the message A07931 "Brake does not open" are deactivated.		
p1217	Motor holding brake closing time / Brake t_{close}		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2701, 2711
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	100 [ms]
Description:	Sets the time to apply the motor holding brake. After OFF1 or OFF3 and the holding brake is controlled (the brake closes), then the drive remains closed-loop controlled for this time stationary with a speed setpoint/velocity setpoint of zero. The pulses are suppressed when the time expires.		
Recommendation:	This time should be set longer than the actual closing time of the brake. This ensures that the pulses are only suppressed after the brake has closed.		
Dependency:	Refer to: p1215, p1216		
Notice:	If the selected closing time is too short with respect to the actual closing time of the brake, then the load can sag. If the closing time is selected to be too long with respect to the actual closing time of the brake, the control works against the brake and therefore reduces its lifetime.		
Note:	For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor. For p1217 = 0 ms, the monitoring and the message A07932 "Brake does not close" are deactivated.

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	20.00 [rpm]
Description:	Sets the speed threshold for the standstill identification. Acts on the actual value and setpoint monitoring. When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified. The following applies when the brake control is activated: When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.		

if the brake control is not activated, the following applies:

When the threshold is undershot, the pulses are suppressed and the drive coasts down.

Dependency:

Refer to: p1215, p1216, p1217, p1227

Notice:

For reasons relating to the compatibility to earlier firmware versions, a parameter value of zero in indices 1 to 31 is overwritten with the parameter value in index 0 when the Control Unit boots.

Note:

Standstill is identified in the following cases:

- the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired.

The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the speed threshold is too low.

p1227**Zero speed detection monitoring time / n_standst t_monit**

VECTOR_G

Can be changed: U, T**Calculated:** -**Access level:** 2**Data type:** FloatingPoint32**Dyn. index:** -**Func. diagram:** 2701, 2704**P-Group:** Functions**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0.000 [s]

300.000 [s]

4.000 [s]

Description:

Sets the monitoring time for the standstill identification.

When braking with OFF1 or OFF3, standstill is identified after this time has expired, after the setpoint speed has fallen below p1226 (also refer to p1145).

After this, the brake control is started, the system waits for the closing time in p1217 and then the pulses are suppressed.

Dependency:

Refer to: p1215, p1216, p1217, p1226

Notice:

For p1145 > 0.0 (RFG tracking) the setpoint is not equal to zero dependent on the selected value. This can therefore cause the monitoring time in p1227 to be exceeded. In this case, for a driven motor, the pulses are not suppressed.

Note:

Standstill is identified in the following cases:

- the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired.

For p1227 = 300.000 s the following applies:

Monitoring is deactivated.

For p1227 = 0.000 s, the following applies:

With OFF1 or OFF3 and a ramp-down time = 0, the pulses are immediately suppressed and the motor "coasts" down.

p1228**Pulse suppression delay time / Pulse suppr t_del**

VECTOR_G

Can be changed: U, T**Calculated:** -**Access level:** 2**Data type:** FloatingPoint32**Dyn. index:** -**Func. diagram:** 2701, 2704**P-Group:** Functions**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

0.000 [s]

299.000 [s]

0.000 [s]

Description:

Sets the delay time for pulse suppression.

After OFF1 or OFF3, the pulses are canceled, if at least one of the following conditions is fulfilled:

- the speed actual value falls below the threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the threshold in p1226 and the time started after this in p1227 has expired.

Dependency:

Refer to: p1226, p1227

Notice:

When the motor holding brake is activated, pulse cancellation is additionally delayed by the brake closing time (p1217).

Note:	1 signal: Armature short-circuit/DC braking activated. 0 signal: Armature short-circuit/DC braking deactivated.			

p1231[0...n]	Armature short-circuit / DC braking configuration / ASC/DCBRK config			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: MDS, p0130	Func. diagram: 7014, 7016, 7017	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	14	0	
Description:	Setting to activate the various types for armature short-circuit / DC braking.			
Value:	0: No function 1: External armature short-circuit with contactor feedback signal 2: Ext. armature short circuit without contactor feedback signal 3: Internal voltage protection 4: Internal armature short-circuit / DC braking 5: DC braking for OFF1/OFF3 14: DC braking below starting speed			
Dependency:	Refer to: p0300, p1230, p1232, p1233, p1234, p1235, p1236, p1237, r1238, r1239, p1345, p1346			
Danger:	For p1231 = 1, 2: - only short-circuit-proof motors may be used, or suitable resistors must be used to short-circuit the motor			
				

For p1231 = 3:

- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)!
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).
- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.
- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.
- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.
- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

For p1231 = 4 and synchronous motor:

- when armature short-circuit is active, all of the motor terminals are at half of the DC link potential.
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).
- for pulling loads, it is not permissible that an armature short circuit is used by itself. The reason for this is that until this becomes effective, the motor will have continued to rotate. In the case of a fault, it is only permissible to use an armature short circuit as support in conjunction with a mechanical brake.

For p1231 = 4 and induction motor:

- it is not permissible that DC braking is used for pulling loads; this is because during the demagnetization time (p0347) the motor rotates and a mechanical brake is then only closed while the motor is still rotating.

Note:

For p1231 = 1, 2:

The external armature short circuit can only be selected for synchronous motors (p0300). In this case, control bit BO: r1239.0 must be interconnected (e.g. to a digital input) to control the external contactor.

The external armature short circuit cannot be set as a fault response. It can be triggered via binector input p1230. It is also always activated in the case of pulse suppression.

When the external armature short circuit is activated, the system waits for the de-excitation time (p0347) before the short-circuit contactor is controlled. For vector control, for the de-excitation time, a value greater than zero may be required in order to avoid the overcurrent monitoring from responding.

For p1231 = 3:

Internal voltage protection (using an internal armature short circuit) can only be selected for synchronous motors (p0300) and Motor Modules in booksize or chassis format. Further, it is not permissible for Safety Integrated to be active on blocksize Motor Modules (i.e. p9501 = 0 and p9601 = 0). The internal voltage protection prevents the DC link capacitance from being charged if there is no possibility of regenerating the EMF of a motor operated in the field-weakening mode. The Motor Module must support this function (r0192.9 = 1).

a) If the Motor Module does not support the autonomous, internal armature short-circuit (r0192.10 = 0), the armature short-circuit is activated as soon as the activation criterion is fulfilled (refer below):

b) If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module itself decides - using the DC link voltage - as to whether the short-circuit should be activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn. This therefore ensures that the required input voltage for the Control Supply Module is maintained.

For chassis units, the following applies:

The value for the voltage limits is calculated, depending on the voltage class, from EEPROM data of the particular power unit and a factor.

For p1231 = 4:

The function is activated as soon as the activation criterion is fulfilled.

- the function can be superseded by OFF2

a) For synchronous motors (p0300 = 2xx, 4xx), the internal armature short-circuit is initiated.

- the Motor Module must support this function (r0192.9 = 1).

b) For induction motors (p0300 = 1xx), the DC braking is initiated.

Activation criterion (one of the following criteria is fulfilled):

- binector input p1230 = 1 signal (DC braking activation).
- the drive is not in the state "S4: Operation" or in "S5x" (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

2 Parameters

2.2 List of parameters

For p1231 = 5:

DC braking can only be set for induction motors.

DC braking is activated if the OFF1 or OFF3 command is present. Binector input p1230 is ineffective. If the drive speed still lies above the speed threshold p1234, then initially, the drive is ramped-down to this threshold, demagnetized (see p0347) and is then switched into DC braking for the time set in p1233. After this, the drive is switched-off. If, at OFF1/OFF3, the drive speed is below p1234, then it is immediately demagnetized and switched into DC braking. A change is made into normal operation if the OFF1 command is withdrawn prematurely.

DC braking by means of fault response continues to be possible.

For p1231 = 14:

DC braking can only be set for induction motors.

DC braking is initiated if binector input p1230 = 1 during operation and the actual speed is below the starting speed p1234 (before this, the drive must have operated above p1234 plus the hysteresis). Then, following upstream demagnetization (see p0347), the braking current p1232 is injected for the time set in p1233. The drive then changes into normal operation. During braking the command for DC braking can be withdrawn. If the time p1233 is exceeded, then DC braking is inhibited and the drive changes into normal operation.

For OFF1 and OFF3, DC braking is only executed, if binector input p1230 = 1 signal.

DC braking by means of fault response continues to be possible.

For operation with an encoder, the encoder signal may not exceed a ripple of 15 rpm in the range of p1234.

For p1231 = 3, 4, 5, 14:

The value can only be changed to values not equal to 3, 4, 5 or 14 if p0491 is not equal to 4 and p2101 is not equal to 6 (armature short-circuit/DC braking not set).

In order that the armature short-circuit/DC braking is active as fault response, the corresponding fault number must be entered in p2100 and fault response p2101 set = 6 (encoder fault response, see p0491).

Note:

ASC: Armature Short Circuit

CSM: Control Supply Module

DCBRK: DC Braking

IVP: Internal Voltage Protection

UPS: Uninterruptible Power Supply

p1232[0...n]	DC braking braking current / DCBRK I_brake		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 7017
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the braking current for DC braking.		
Dependency:	Refer to: p1230, p1231, p1233, p1234, r1239, p1345, p1346		
Note:	A change to the braking current becomes effective the next time that DC braking is switched on. The value for p1232 is specified as an rms value in the 3-phase system. The magnitude of the braking current is the same as that of an identical output current at frequency zero (see r0067, r0068, p0640). The braking current is internally limited to r0067. For the current controller, the settings of parameters p1345 and p1346 (I_max limiting controller) are used.		

p1233[0...n]	DC braking time / DCBRK time		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 7017
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	3600.0 [s]	1.0 [s]
Description:	Sets the DC braking time (as fault response).		
Dependency:	Refer to: p1230, p1231, p1232, p1234, r1239		

Note: The time set is also effective when parameterizing DC braking as fault response.
If a speed encoder is being used, DC braking is ended as soon as the drive falls below the standstill threshold (p1226).

p1234[0...n]	Speed at the start of DC braking / DCBRK n_start		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 7017
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	40000.00 [rpm]
Description:	Sets the starting speed for DC braking. If the actual speed falls below this threshold, then DC braking is activated.		
Dependency:	Refer to: p1230, p1231, p1232, p1233, r1239		
Notice:	If an encoder fault occurs during closed-loop operation with an encoder, controlled deceleration of the drive down to the start speed p1234 is no longer possible. In this case, DC braking is activated immediately and injects the braking current p1232 for the braking time p1233 after de-magnetizing. The braking current and braking duration must, therefore, be dimensioned accordingly for this situation so that the drive can be decelerated to standstill. In the case of operation with an encoder, this speed may not be set too low so as ensure that the oscillation movement induced by the residual flux/remanence of the motor does not cause DC braking to be deactivated again.		
Note:	Function p1231 = 14 is activated at 15 1/min higher than the value set in p1234. This hysteresis is required to prevent DC braking from being deactivated for speed encoder signals with ripple.		

p1235[0...n]	BI: External armature short-circuit contactor feedback signal / ASC ext feedback		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 1

	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the contactor feedback signal for external armature short-circuit.		
Dependency:	Refer to: p1230, p1231, p1236, p1237, r1239		
Notice:	In order that the pulses are not enabled when the contactor is closed, the contactor feedback signal must lag by a sufficiently long time when opening the contactor.		
Note:	1 signal: The contactor is closed. 0 signal: The contactor is open.		

p1236[0...n]	Ext. armature short-cct. contactor feedback signal monit. time / ASC ext t_monit		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	200 [ms]
Description:	Sets the monitoring time of the contactor feedback signal for the external armature short-circuit configuration. If the contactor feedback signal (p1235) is parameterized, then the appropriate feedback signal (r1239.1) is expected within this monitoring time after either opening or closing the contactor.		
Dependency:	Refer to: p1230, p1231, p1235, p1237, r1239 Refer to: F07904, F07905		

p1237[0...n]	External armature short-circuit delay time when opening / ASC ext t_wait		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	200 [ms]
Description:	Sets the delay time when opening the contactor of the external armature short-circuit. If no contactor feedback signal has been selected (p1235), then the system waits for this time before the pulses are switched in.		
Dependency:	Refer to: p1230, p1231, p1235, p1236, r1239		
Notice:	This delay time must be at least long enough so that the contactor contacts reliably open before the pulses are switched in. The delay time must be greater than the contactor response time. The Motor Module can be damaged if the delay time is too short.		

r1238	CO: Armature short-circuit external state / EASC state		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 2610
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	-
Description:	Displays the state for the external armature short-circuit.		
Value:	0: Switched off 1: Ready 2: Active 3: Active - feedback signal "Closed" OK 4: Active - feedback signal "Closed" missing 5: Prompt to remove the armature short-circuit 6: Active - feedback signal "Open" missing		
Dependency:	Refer to: p1230, p1231, p1235, p1236, p1237, r1239 Refer to: F07904, F07905		
Note:	Activation criterion (one of the following criteria is fulfilled): - the signal at BI: p1230 (armature short-circuit activation) is 0. - the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610). - the internal pulse enable is missing (r0046.19 = 0). For state "switched out" (r1238 = 0): - the external armature short-circuit can be selected with p1231 = 1. For state "ready" (r1238 = 1): - as soon as the activation criterion is fulfilled, then a transition is made into the state "active" (r1238 = 2). Regarding the state "active" (r1238 = 2), "active - feedback signal "Closed" OK" (r1238 = 3), "active - feedback signal "Closed" missing" (r1238 = 4)": - the control signal to close contactor r1239.0 is set to "1" (closed) and the pulses are suppressed. - if a contactor feedback signal is not connected (BI: p1235 = 0 signal), then a transition is immediately made into state 3. - if a contactor feedback signal is connected, then a transition is made into state 3 if the feedback signal at BI: p1235 goes to "1" (closed) within the monitoring time (p1236). - otherwise, a transition is made into state 4. For state "prompt to remove the armature short-circuit" (r1238 = 5): - the activation criterion is no longer fulfilled. An attempt is made to again remove the armature short circuit. - the control signal to close the contactor r1239.0 is set to "0" (open) and the pulses remain suppressed.		

- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), the system waits for the delay time (p1237) to expire until a transition is made into state 1.

- if a contactor feedback signal is connected, the system waits until the feedback signal at BI:p1235 goes to "0" (open) until a transition is made into state 1. If this does not occur within the monitoring time (p1236), then a transition is made into state 6.

For state "active - feedback signal "Open" missing" (r1238 = 6):

- this error state can be exited by deselecting the external armature short-circuit (p1231 = 0).

r1239.0...13**CO/BO: Armature short-circuit / DC braking status word / ASC/DCBRK ZSW**

VECTOR_G

06	Internal armature short-circuit ready	Yes	No	-
08	DC braking active	Yes	No	7017
09	DC current injection active	Yes	No	-
10	DC braking ready	Yes	No	7017
11	Armature short circuit/DC braking selected	Yes	No	-
12	DC braking selection internally inhibited	Yes	No	-
13	DC braking for OFF1/OFF3	Yes	No	-

Dependency:

Refer to: p1230, p1231, p1232, p1233, p1234, p1235, p1236, p1237

Note:

External armature short-circuit (bits 0 ... 3):

For bit 00:

Using this signal, the motor is short-circuited through an external contactor circuit. This means that this BO: p1239.0 must be interconnected e.g. to a digital output.

For bit 01:

This signal indicates the state of the contactor to establish the armature short-circuit. To do this, BI: p1235 must be interconnected to a digital input.

For bit 02:

The external armature short-circuit configuration is ready and is activated as soon as the activation criterion is fulfilled.

For bit 03:

1: A feedback signal from an external contactor was parameterized in BI: p1235.

Internal voltage protection / internal armature short-circuit (bits 4 ... 6):

For bit 04:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The Motor Module decides autonomously whether the armature short-circuit is activated. In this case, the following applies: r1239.4 = r1239.5.

c) Internal armature short-circuit (p1231 = 4) was selected.

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

For bit 05:

The Motor Module signals that the motor is short-circuited in the Motor Module through the power semiconductors.

For bit 06:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The internal voltage protection is ready and is activated as soon as the activation criterion is fulfilled.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The internal voltage protection is ready and the Motor Module decides autonomously - using the DC link voltage - whether the short-circuit is activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short-circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn.

c) Internal armature short-circuit (p1231 = 4) was selected.

The internal armature short-circuit is ready and is activated as soon as the activation criterion is fulfilled.

Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 1.
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

For bits 12, 13:

Only effective for p1231 = 14.

6

1

Description:

Sets the controller configuration of the DC link voltage (Vdc controller) in the closed-loop control mode.

Value:

- 0: Inhibit Vdc ctrl
- 1: Enable Vdc_max controller
- 2: Enable Vdc_min controller (kinetic buffering)
- 3: Enable Vdc_min controller and Vdc_max controller
- 4: Activate Vdc_max monitoring
- 5: Activate Vdc_min monitoring
- 6: Activate Vdc_min monitoring and Vdc_max monitoring

Dependency:

Refer to: p1245
Refer to: A07400, A07401, A07402, F07403, F07404, F07405, F07406

Warning:

When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.

Caution:

If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with high moments of inertia. If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated.

Drives with Udc control must be able to brake and accelerate independently of one another.

Notice:

An excessively high value in p1245 can possibly negatively influence the normal operation of the drive.

Note:

p1240 = 1, 3:

When the DC link voltage limit specified for the Motor Module is reached the following applies:

- the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking.
- the ramp-down times are automatically increased.

p1240 = 2, 3:

When the switch-in threshold of the Vdc_min controller is reached (p1245), the following applies:

- the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating.
- the motor is braked in order to use its kinetic energy to buffer the DC link.

p1240 = 4, 5, 6:

When the threshold in r1242 or r1246 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled (also see p1531).

r1242	Vdc_max controller switch-in level / Vdc_max on_level		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6220
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the switch-in level for the Vdc_max controller. If p1254 = 0 (automatic sensing of the switch-in level = off), then the following applies: AC/AC device: $r1242 = 1.15 * \sqrt{2} * p0210$ DC/AC device: $r1242 = 1.15 * p0210$ If p1254 = 1 (automatic sensing of the switch-in level = on), then the following applies: $r1242 = Vdc_max - 50.0 \text{ V}$ (Vdc_max: Overvoltage threshold of the power unit) $r1242 = Vdc_max - 25.0 \text{ V}$ (for 230 V power units)		
Notice:	If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.		
Note:	The Vdc_max controller is not switched back off until the DC link voltage falls below the threshold $0.95 * r1242$ and the controller output is zero.		
p1243[0...n]	Vdc_max controller dynamic factor / Vdc_max dyn_factor		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3

	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]

Description: Sets the lower speed threshold for the Vdc_max controller.

When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

Note: For fast braking where the ramp-function generator tracking was active, it is possible to prevent the drive rotating in the opposite direction by increasing the speed threshold and setting a final rounding-off time in the ramp-function generator (p1131). This is supported using a dynamic setting of the speed controller.

p1250[0...n]	Vdc controller proportional gain / Vdc_ctrl Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	1.00
Description:	Sets the proportional gain for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	The effective proportional gain is obtained taking into account p1243 (Vdc_max controller dynamic factor).		
Note:	The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units, which are connected to the DC link, can be taken into account using the dynamic factor (p1247 or p1243).		
p1251[0...n]	Vdc controller integral time / Vdc_ctrl Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6220
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	0 [ms]
Description:	Sets the integral time for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	The effective integral time is obtained taking into account p1243 (Vdc_max controller dynamic factor).		
Note:	An integral time is normally not required for single axis drives. For multi-axis drives on the other hand, it may be possible to compensate for interference from other axes using the integral time (integral component) . p1251 = 0: The integral component is deactivated.		
p1252[0...n]	Vdc controller rate time / Vdc_ctrl t_rate		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6220
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the rate time constant for the DC link voltage controller (Vdc_min controller, Vdc_max controller).		
Dependency:	The effective rate time is obtained taking into account p1243 (Vdc_max controller dynamic factor).		
p1254	Vdc_max controller automatic ON level detection / Vdc_max SenseOnLev		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1
Description:	Activates/deactivates the automatic sensing of the switch-in level for the Vdc_max controller.		
Value:	0: Automatic detection inhibited 1: Automatic detection enabled		

2 Parameters

2.2 List of parameters

p1255[0...n]	Vdc_min controller time threshold / Vdc_min t_thresh		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	10000.000 [s]	0.000 [s]
Description:	Sets the time threshold for the Vdc_min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized. Prerequisite: p1256 = 1		
Dependency:	Refer to: F07406		
Notice:	If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1240 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.		
p1256[0...n]	Vdc_min controller response (kinetic buffering) / Vdc_min response		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the response for the Vdc_min controller (kinetic buffering).		
Value:	0: Buffer Vdc until undervoltage, n<p1257 -> F07405 1: Buff. Vdc until undervolt., n<p1257 -> F07405, t>p1255 -> F07406		
Dependency:	Refer to: F07405, F07406		
p1257[0...n]	Vdc_min controller speed threshold / Vdc_min n_thresh		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	50.00 [rpm]
Description:	Sets the speed threshold for the Vdc-min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized . Kinetic buffering is not started below the speed threshold.		
Note:	Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down. However, the maximum braking torque can be set via the appropriate torque limiting.		
r1258	CO: Vdc controller output / Vdc_ctrl output		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6220
	P-Group: Functions	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the actual output of the Vdc controller (DC link voltage controller)		
Note:	The regenerative power limit p1531 is used for vector control to precontrol the Vdc_max controller. The lower the power limit is set, the lower the correction signals of the controller when the voltage limit is reached.		

p1260		Bypass configuration / Bypass config		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	3	0	
Description:	Sets the configuration for the bypass function.			
Value:	0: Bypass deactivated 1: Bypass with synchronization and overlap 2: Bypass with synchronization without overlap 3: Bypass without synchronization			
Note:	If the bypass function is selected (p1260 > 0), then when the power unit restarts after POWER OFF, the state of the bypass switch is evaluated. This means that after the ramp-up, it is possible to directly change into the standby mode. This is only possible for p1267 = 1 (bypass using the control signal) and if the control command after the system has been booted is still available (p1266). This function has a higher priority than the automatic restart function (p1210). The "bypass" function can only be switched off again (p1260 = 0) if the bypass is not active or the bypass function has a fault. The corresponding function should be activated in p3800 for bypass with synchronization.			

r1261.0...12		CO/BO: Bypass control/status word / Bypass STW / ZSW			
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: RESM	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Control and feedback signals of the bypass switch.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Command switch motor - power unit	Close	Open	-
	01	Command switch motor - line supply	Close	Open	-
	02	Synchronization requested	Yes	No	-
	03	Staging status	Active	Not active	-
	05	Feedback signal switch motor - power unit	Closed	Opened	-
	06	Feedback signal switch motor - line supply	Closed	Opened	-
	07	Bypass command (from p1266)	Yes	No	-
	08	Feedback signal synchronization completed (from p1268)	Yes	No	-
	09	Staging requested (from p2369)	Yes	No	-
	10	Bypass in process sequence	Yes	No	-
	11	Bypass enabled	Yes	No	-
	12	DC link voltage monitoring activated	Yes	No	-
Dependency:	Refer to: p1200, p2369				
Note:	Control bits 0 and 1 should be interconnected to the signal outputs via which the switches in the motor feeder cables should be controlled. These should be selected/dimensioned for switching under load. For bit 12: The DC link voltage monitoring is only available for a synchronized bypass. The overcurrent monitoring is also activated together with the DC link voltage monitoring. For debypass, monitoring is only activated if "Flying restart" is activated.				

2 Parameters

2.2 List of parameters

p1262[0...n]	Bypass dead time / Bypass t_{dead}		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: RESM Min 0.000 [s]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 20.000 [s]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000 [s]
Description:	Sets the dead time for non-synchronized bypass.		
Note:	This parameter is used to define the changeover time of the contactors. It should not be shorter than the de-magnetizing time of the motor (p0347). The total switchover time for the bypass is obtained from the sum of p1262 and the switch-off time of the relevant switch (p1274[x]).		
p1263	Debypass delay time / Debypass t_{del}		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: RESM Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.000 [s]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000 [s]
Description:	Sets the delay time to switch back to converter operation for a non-synchronized bypass.		
p1264	Bypass delay time / Bypass t_{del}		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: RESM Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 300.000 [s]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000 [s]
Description:	Sets the delay time for switching to line operation for a non-synchronized bypass.		
p1265	Bypass speed threshold / Bypass n_{thresh}		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: REL, RESM Min 0.00 [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max 210000.00 [rpm]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 1480.00 [rpm]
Description:	Sets the speed threshold to activate the bypass.		
Dependency:	If the drive setpoint speed is entered via a motorized potentiometer, then the configuration bit p1030.4 should be set in order to ensure the bypass via speed threshold function.		
Note:	When selecting p1260 = 3 and p1267.1 = 1, the bypass is automatically activated when this speed is reached.		
p1266	BI: Bypass control command / Bypass command		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: RESM Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the control command to the bypass.		

p1267	Bypass changeover source configuration / Chngov_src config			
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Sets the cause that should initiate the bypass.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Bypass via signal (BI: p1266)	Yes	No
	01	Bypass via reaching the speed threshold	Yes	No
Note:	The parameter only has an effect for a non-synchronized bypass.			
	p1267.0 = 1:			
	The bypass is initiated by setting a binary signal. When the command is reset, after the debypass delay time (p1263) has expired, operation at the power unit is re-selected.			
	p1267.1 = 1:			
	When the speed threshold entered in p1265 is reached, the bypass is switched in. The system only switches back when the speed setpoint again falls below the threshold value.			
p1268	BI: Bypass feedback synchronization completed / FS sync compl			
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	3819.2	
Description:	Sets the signal source for the feedback signal "synchronization completed" for the bypass function.			
Dependency:	Refer to: r3819			
p1269[0...1]	BI: Bypass switch feedback signal / Bypass FS			
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -	
	P-Group: -	Unit group: -	Unit selection: -	
	Not for motor type: RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the feedback signal of the bypass switch.			
Index:	[0] = Switch motor/drive [1] = Switch motor/line supply			
Note:	In the case of switches without a feedback signal, interconnect the corresponding control bit as the signal source:			
	BI: p1269[0] = r1261.0			
	BI: p1269[1] = r1261.1			

p1270[0...n]	Flying restart configuration / Fly restart config		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for the "flying restart function".

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fast flying restart with voltage model for induction motor	Yes	No	-
	01	PLL expansion for fast flying restart w/ voltage model for ASM	Yes	No	-
	12	Siemens internal	Yes	No	-
	13	Siemens internal	ON	OFF	-
	14	Siemens internal	ON	OFF	-
	15	Siemens internal	ON	OFF	-

Caution:

For bit 00 = 1:
When using a dv/dt filter, it is not permissible that a flying restart with voltage model is activated.

Notice:

For bit 00:
When selecting - also for U/f characteristic operation - a standstill measurement to identify the motor data must have been performed to set the necessary current controller for a fast flying restart.

Note:

ASM: Induction motor
PMSM: permanent-magnet synchronous motor
For bit 00:
This bit is equivalent to p1780 bit 11.
For bit 01:
This bit should only be set when required for large drives.

p1271[0...n]	Flying restart maximum frequency for the inhibited direction / FlyRes f_max dir		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [Hz]	650 [Hz]	0 [Hz]

Description: Sets the maximum search frequency for a flying restart in an inhibited setpoint direction (p1110, p1111).

Note: The parameter has no effect for an operating mode, which only searches in the setpoint direction (p1200 > 3).

p1272	Simulation mode / Simulation mode		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: In the simulation mode, the closed-loop control or U/f control can be operated without motor. The simulation mode is used to test the power unit. Even though the DC link voltage is missing, the pulses are enabled when switching on. The DC link precharging is bypassed and the undervoltage detection is disabled. Closed-loop speed control with an encoder is possible if the torque setpoint (r0079) is used in order to operate a second drive in the closed-loop torque controlled mode.

Value:
0: OFF
1: ON

- Dependency:** The following functions are deactivated in the simulation mode:
- motor data identification routine
 - motor data identification routine, rotating without encoder
 - pole position identification
- For U/f control and sensorless vector control, flying restart is not carried out (refer to p1200).
Refer to: r0192, p1900, p1910, p1960, p1990
Refer to: A07825, F07826
- Notice:** In simulation mode, binector output r0863.1 = 1 is set. This is why you need to check whether other devices are switched on via this signal before activating simulation mode. You might need to disconnect the corresponding BICO interconnection temporarily.
- Note:** Simulation mode is only possible for DC link voltages below 40 V. In order that the closed-loop control can be calculated, the displayed DC link voltage (r0026, r0070) is set to the rated DC link voltage (refer to p0210). Closed-loop current control and motor model are switched out (disabled) - the same is true for the speed controller for encoderless closed-loop speed control.
When fault messages occur, the parameter is not automatically reset. This function is not implemented for SINAMICS GM.

p1274[0...1]	Bypass switch monitoring time / Switch t_monit		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	5000 [ms]	1000 [ms]

- Description:** Sets the monitoring time for the bypass switch.
- Index:**
[0] = Switch motor/drive
[1] = Switch motor/line supply
- Dependency:** Refer to: p1260
- Note:** The monitoring is deactivated with p1274 = 0 ms.
For non-synchronized bypass (p1260 = 3), the following applies:
The changeover time for the bypass (p1262) is extended by the value in this parameter.

p1275	Motor holding brake control word / Brake STW		
VECTOR_G (Ext brake)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 bin

- Description:** Sets the control word for the motor holding brake.
- Bit field:**
- | Bit | Signal name | 1 signal | 0 signal | FP |
|-----|-----------------------------|----------|----------|------|
| 00 | Inversion BI: 1219[0] | Yes | No | 2707 |
| 01 | Inversion BI: 1219[1] | Yes | No | 2707 |
| 02 | Inversion BI: 1224[0] | Yes | No | 2704 |
| 03 | Inversion BI: 1224[1] | Yes | No | 2704 |
| 05 | Brake with feedback | Yes | No | 2711 |
| 06 | Enable with feedback signal | Yes | No | 2711 |
- Note:** For p1275.6 = 1 and p1275.5 = 1, the following applies:
The pulse enable (BO: r1229.3) is independent of the timer that has been set (p1217, p1216). The particular enable is only defined by the feedback signal (BI: p1222, BI: p1223). The timers (p1216, p1217) only influence the alarm A07931 "Brake does not open" and A07932 "Brake does not close".

p1276	Motor holding brake standstill detection bypass / Brk standst bypass		
VECTOR_G (Ext brake)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2704
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	300.000 [s]	300.000 [s]
Description:	Sets the delay time for closing the brake at standstill. After this time has expired, if the "close brake at standstill" or OFF1/OFF3 is present, the brake is closed and the pulses are suppressed. For p1276 = 300.000 s, the timer is deactivated - this means that the timer output is always zero.		

p1277	Motor holding brake braking threshold delay exceeded / Del thresh exceed		
VECTOR_G (Ext brake)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 2707
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	300.000 [s]	0.000 [s]
Description:	Sets the delay time for the signal "braking threshold exceeded" (BO: r1229.6).		
Dependency:	Refer to: p1220, p1221, r1229		

p1278	Brake control diagnostics evaluation / Brake diagnostics		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the brake control type (with or without diagnostics evaluation). Example for brake control with diagnostics evaluation. - brake control in the Motor Modules in booksize format - Safe Brake Relay for AC Drive Example for brake control without diagnostics evaluation. - Brake Relay for AC Drive		
Value:	0: Brake control with diagnostics evaluation 1: Brake control without diagnostics evaluation		
Note:	If the configuration of the motor holding brake (p1215) is set to "no holding brake present" when booting, then an automatic identification of the motor holding brake will be carried out. If a brake control is detected without diagnostics evaluation (e.g. Brake Relay for AC Drive), then the parameter is set to "brake control without diagnostics evaluation". It is not permissible to parameterize "brake control without diagnostics evaluation" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).		

p1279[0...3]	BI: Motor holding brake OR/AND logic operation / Brake OR AND		
VECTOR_G (Ext brake)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 2707
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the OR/AND logic operation.		
Dependency:	Refer to: r1229		

Note: [0]: OR logic operation, input 1 --> the result is displayed in r1229.10.
 [1]: OR logic operation, input 2 --> the result is displayed in r1229.10.
 [2]: AND logic operation, input 1 --> the result is displayed in r1229.11.
 [3]: AND logic operation, input 2 --> the result is displayed in r1229.11.

p1280[0...n]	Vdc controller or Vdc monitoring configuration (U/f) / Vdc_ctr config U/f		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300, 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	1

Description: Sets the configuration of the controller for the DC link voltage (Vdc controller) in the U/f operating mode.

Value: 0: Inhibit Vdc ctrl
 1: Enable Vdc_max controller
 2: Enable Vdc_min controller (kinetic buffering)
 3: Enable Vdc_min controller and Vdc_max controller
 4: Activate Vdc_max monitoring
 5: Activate Vdc_min monitoring
 6: Activate Vdc_min monitoring and Vdc_max monitoring

Warning:  When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.

Caution:  If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with relatively high moments of inertia.
 If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated.

Drives with Udc control must be able to brake and accelerate independently of one another.

Note: For p1280 = 4, 5, 6:

When the threshold in r1282 or r1286 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled.

For p1280 = 1, 3:

Only U/f control: When the Vdc max controller is active, fault F07404 is initiated if the speed setpoint ramp is stopped (held) longer than the time set in p1284.

p1281[0...n]	Vdc controller configuration / Vdc ctrl config		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration for the DC link voltage controller.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Vdc min control (U/f) without up ramp	Yes	No	-
	02	Vdc min shorter wait time when the line returns	Yes	No	-

Note: ASM: Induction motor (induction motor)
 PMSM: permanent-magnet synchronous motor
 For bit 00:
 This bit is equivalent to p1780 bit 1.
 For bit 01:
 This bit should only be set when required for large drives.

r1282	Vdc_max controller switch-in level (U/f) / Vdc_max on_level		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	<p>Displays the switch-in level for the Vdc_max controller.</p> <p>If p1294 = 0 (automatic sensing of the switch-in level = off), then the following applies: AC/AC device: $r1282 = 1.15 * \sqrt{2} * p0210$ DC/AC device: $r1282 = 1.15 * p0210$</p> <p>If p1294 = 1 (automatic sensing of the switch-in level = on), then the following applies: $r1282 = Vdc_max - 50.0 \text{ V}$ (Vdc_max: Overvoltage threshold of the power unit) $r1282 = Vdc_max - 25.0 \text{ V}$ (for 230 V power units)</p>		
Notice:	If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.		
Note:	The Vdc_max controller is not switched back off until the DC link voltage falls below the threshold $0.95 * r1282$ and the controller output is zero.		
p1283[0...n]	Vdc_max controller dynamic factor (U/f) / Vdc_max dyn_factor		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	10000 [%]	100 [%]
Description:	<p>Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).</p> <p>100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used in accordance with their basic settings and on the basis of a theoretical controller optimization.</p> <p>If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1283.</p> <p>If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.</p>		
Note:	The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.		
p1284[0...n]	Vdc_max controller time threshold (U/f) / Vdc_max t_thresh		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	300.000 [s]	4.000 [s]
Description:	<p>Sets the monitoring time for the Vdc_max controller.</p> <p>If the down ramp of the speed setpoint is held for longer than the time set in p1284, then fault F07404 is output.</p>		

p1285[0...n]	Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	65 [%]	150 [%]	76 [%]
Description:	Sets the switch-in level for the Vdc-min controller (kinetic buffering). The value is obtained as follows: AC/AC device: $r1286[V] = p1285[\%] * \sqrt{2} * p0210$ DC/AC device: $r1286[V] = p1285[\%] * p0210$		
Warning:	An excessively high value may adversely affect normal drive operation. The values up to 150 % are intended for operating modes p1240 = 5, 6.		
			
r1286	Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the switch-in level for the Vdc_min controller (kinetic buffering).		
Note:	The Vdc_min controller is not switched back off until the DC link voltage rises above the threshold $1.05 * r1286$ and the controller output is zero.		
p1287[0...n]	Vdc_min controller dynamic factor (kinetic buffering) (U/f) / Vdc_min dyn_factor		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	10000 [%]	100 [%]
Description:	Sets the dynamic factor for the Vdc_min controller (kinetic buffering). 100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization. If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1287. If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.		
Note:	The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.		
p1288[0...n]	Vdc_max controller feedback coupling factor ramp-fct. gen. (U/f) / Vdc_max factor RFG		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100.000	0.500
Description:	Sets the feedback factor for the ramp-function generator. Its ramp times are decelerated relative to the output signal of the Vdc_max controller.		

2 Parameters

2.2 List of parameters

Note: For values p1288 = 0.0 to 0.5, the controller dynamics are automatically adapted internally.

p1289[0...n]	Vdc_max controller speed threshold (U/f) / Vdc_max n_thresh		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]
Description:	Sets the lower speed threshold for the Vdc_max controller. When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.		

p1290[0...n]	Vdc controller proportional gain (U/f) / Vdc_ctrl Kp		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	1.00
Description:	Sets the proportional gain for the Vdc controller (DC link voltage controller).		
Note:	The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units which are connected to the DC link can be taken into account using the dynamic factor (p1287 or p1283).		

p1291[0...n]	Vdc controller integral time (U/f) / Vdc_ctrl Tn		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	40 [ms]
Description:	Sets the integral time for the Vdc controller (DC link voltage controller).		

p1292[0...n]	Vdc controller rate time (U/f) / Vdc_ctrl t_rate		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	10 [ms]
Description:	Sets the rate time constant for the Vdc controller (DC link voltage controller).		

p1293[0...n]	Vdc min controller output limit (U/f) / Vdc_min outp_lim		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6320
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	600.00 [Hz]	10.00 [Hz]
Description:	Sets the output limit for the Vdc min controller (DC link undervoltage controller).		

p1294	Vdc_max controller automatic detection ON signal level (U/f) / Vdc_max SenseOnLev		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Activates/deactivates the automatic sensing of the switch-in level for the Vdc_max controller. When the sensing function is deactivated, the activation threshold r1282 for the Vdc_max controller is determined from the parameterized connection voltage p0210.		
Value:	0: Automatic detection inhibited 1: Automatic detection enabled		
p1295[0...n]	Vdc_min controller time threshold (U/f) / Vdc_min t_thresh		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	10000.000 [s]	0.000 [s]
Description:	Sets the time threshold for the Vdc_min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized. Prerequisite: p1296 = 1		
Notice:	If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1280 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.		
p1296[0...n]	Vdc_min controller response (kinetic buffering) (U/f) / Vdc_min response		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the response for the Vdc_min controller (kinetic buffering).		
Value:	0: Buffer Vdc until undervoltage, n<p1297 -> F07405 1: Buff. Vdc until undervolt., n<p1297 -> F07405, t>p1295 -> F07406		
Note:	For p1296 = 1: The quick stop ramp entered in p1135 must not be equal to zero, to prevent overcurrent shutdown if F07406 is triggered.		
p1297[0...n]	Vdc_min controller speed threshold (U/f) / Vdc_min n_thresh		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	50.00 [rpm]
Description:	Sets the speed threshold for the Vdc-min controller (kinetic buffering). If this value is exceeded a fault is output; the required response can be parameterized .		
Note:	Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down.		

r1298	CO: Vdc controller output (U/f) / Vdc_ctrl output		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6320
	P-Group: Functions	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the actual output of the Vdc controller (DC link voltage controller)		

p1300[0...n]	Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode		
VECTOR_G	Can be changed: C2(1), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301, 8012
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	19	0
Description:	Sets the U/f control mode of the drive.		
Value:	0: U/f control with linear characteristic 1: U/f control with linear characteristic and FCC 2: U/f control with parabolic characteristic 3: U/f control with parameterizable characteristic 4: U/f control with linear characteristic and ECO 5: U/f control for drives requiring a precise freq. (e.g. textiles) 6: U/f control for drives requiring a precise frequency and FCC 7: U/f control for a parabolic characteristic and ECO 15: Operation with braking resistor 19: U/f control with independent voltage setpoint		
Recommendation:	The use of the vector control operating modes is recommended for synchronous motors.		
Dependency:	If you are working with reduced supply voltages (p0212.0 = 1), only U/f control with independent voltage setpoint (p1300 = 19) can be set as the operating mode.		
	p1300 = 15 (operation with braking resistor), can only be activated or deactivated in quick commissioning (p0010 = 1). This operating mode is only possible for chassis power units (DC/AC Motor Module).		
Notice:	Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). Slip compensation scaling (p1335) must be set so that the slip is completely compensated (or generally, 100 %).		
	The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.		
Note:	The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.		
	For motors, type p0300 = 6, 14, 6xx, the following applies: Operation with U/f control is only recommended for diagnostic purposes.		

p1300[0...n]	Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode		
VECTOR_G (n/M)	Can be changed: C2(1), T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301, 8012
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	23	20
Description:	Sets the open and closed-loop control mode of a drive.		
Value:	0: U/f control with linear characteristic 1: U/f control with linear characteristic and FCC 2: U/f control with parabolic characteristic		

- 3: U/f control with parameterizable characteristic
- 4: U/f control with linear characteristic and ECO
- 5: U/f control for drives requiring a precise freq. (e.g. textiles)
- 6: U/f control for drives requiring a precise frequency and FCC
- 7: U/f control for a parabolic characteristic and ECO
- 15: Operation with braking resistor
- 18: I/f control with fixed current
- 19: U/f control with independent voltage setpoint
- 20: Speed control (encoderless)
- 21: Speed control (with encoder)
- 22: Torque control (encoderless)
- 23: Torque control (with encoder)

Recommendation: The use of the vector control operating modes is recommended for synchronous motors.

Dependency: Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400).

Closed-loop speed or torque control can be selected if the closed-loop speed/torque control was selected as operating mode (p0108.2).

Only operation with U/f characteristic is possible if the rated motor speed is not entered (p0311).

A reluctance motor (p0300 = 8) can only be operated in a U/f control mode (p1300 < 20), a synchronous-reluctance motor (p0300 = 6, 6xx) only in closed-loop speed/torque control.

Sensorless control on separately excited synchronous motors is only possible with a VSM module (see p0150, p0151).

For chassis power units with reduced line voltage (see r0212.0), the drive can only be operated in a control mode (p1300 = 20...23) and with the DC link voltage control activated.

Refer to: p0108, r0108, p0212, p0300, p0311, p0400, p1501

Notice: Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). Slip compensation scaling (p1335) must be set so that the slip is completely compensated (or generally, 100 %).

The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.

For the open-loop control modes p1300 = 5 and 6 (textile sector), slip compensation p1335, resonance damping p1338, and the I_{max} frequency controller are switched off internally so that the output frequency can be set precisely. The I_{max} voltage controller remains active.

For the open-loop control modes p1300 = 4 and 7 (Eco mode), the efficiency can be optimized by varying the voltage (when the operating point is constant).

Separately excited synchronous motors can only be operated in modes p1300 = 20, 21 and 23 - or for diagnostic purposes in modes p1300 = 0, 3 and 18. For I/f control (p1300 = 18), the current amplitude can be set using p1609. Both for U/f as well as for I/f control only a small load may be applied to the separately excited synchronous motor because the excitation current is not calculated as a function of the load.

During operation (pulses enabled) the open-loop/closed-loop control mode cannot be changed by changing over drive data sets.

p1300 is pre-assigned depending on r0108.2 and p0187.

p1302[0...n]	U/f control configuration / U/f config		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 bin

Description: Sets the configuration for the U/f control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Output voltage starting angle zero	Yes	No	-
	01	Take into account the setpoint voltage sign	Yes	No	-
	02	Output voltage angle setpoint input	Yes	No	-
	04	Field orientation	Yes	No	-
	06	Immediate setpoint transfer for pulse inhibit	Yes	No	-

2 Parameters

2.2 List of parameters

Note: For bit 00:
If the bit is set the device will always start up with setpoint angle zero on pulse enable. This also affects the setpoint angle for DC braking (p1231).
For bit 01:
If the bit is set, in the case of U/f control with independent voltage setpoint (p1300 = 19) and negative setpoint voltages at the input of p1330, the setpoint angle is rotated through 180 degrees, thereby achieving a negative output voltage. The voltage boost is in this case not active (p1310, p1311).
For bit 02:
When the bit is set, for U/f controls with independent voltage setpoint (p1300 = 19), the setpoint angle should be entered directly at connector input p1356.
For bit 06 (only for p1300 = 19):
When the bit is set, the setpoints from p1330 for pulse inhibit are transferred without any delay.

p1310[0...n]	Starting current (voltage boost) permanent / I_start (Ua) perm		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	250.0 [%]	50.0 [%]
Description:	<p>Defines the voltage boost as a [%] referred to the rated motor current (p0305). The magnitude of the permanent voltage boost is reduced with increasing frequency so that at the rated motor frequency, the rated motor voltage is present. The magnitude of the boost in Volt at a frequency of zero is defined as follows: Voltage boost [V] = 1.732 x p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1310 (permanent voltage boost [%]) / 100 % At low output frequencies, there is only a low output voltage in order to maintain the motor flux. However, the output voltage can be too low in order to achieve the following:</p> <ul style="list-style-type: none"> - magnetize the induction motor. - hold the load. - compensate for losses in the system. <p>This is the reason that the output voltage can be increased using p1310. The voltage boost can be used for both linear as well as square-law U/f characteristics.</p>		
Dependency:	<p>The starting current (voltage boost) is limited by the current limit p0640. The accuracy of the starting current depends on the setting of the stator and feeder cable resistance (p0350, p0352). Refer to: p1300, p1311, p1312, r1315</p>		
Notice:	The starting current (voltage boost) increases the motor temperature (particularly at zero speed).		
Note:	<p>The starting current as a result of the voltage boost is only effective for U/f control (p1300). The boost values are combined with one another if the permanent voltage boost (p1310) is used in conjunction with other boost parameters (acceleration boost (p1311), voltage boost for starting (p1312)). However, these parameters are assigned the following priorities: p1310 > p1311, p1312</p>		

p1311[0...n]	Starting current (voltage boost) when accelerating / I_start accel		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	250.0 [%]	0.0 [%]
Description:	<p>p1311 only results in a voltage boost when accelerating and generates a supplementary torque to accelerate the load. The voltage boost becomes effective for a positive setpoint increase, and is withdrawn once the setpoint has been reached. The build-up and withdrawal of the voltage boost are smoothed.</p>		

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = 1.732 * p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1311 (voltage boost when accelerating [%]) / 100 %

Dependency:	The current limit p0640 limits the boost. Refer to: p1300, p1310, p1312, r1315
Notice:	The voltage boost results in a higher motor temperature increase.
Note:	The voltage boost when accelerating can improve the response to small, positive setpoint changes. Assigning priorities for the voltage boosts: refer to p1310

p1312[0...n]	Starting current (voltage boost) when starting / I_start start		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	250.0 [%]	0.0 [%]
Description:	Setting for an additional voltage boost when powering-up (only for the first acceleration phase). The voltage boost becomes effective for a positive setpoint increase, and is withdrawn once the setpoint has been reached. The build-up and withdrawal of the voltage boost are smoothed.		
Dependency:	The current limit p0640 limits the boost. Refer to: p1300, p1310, p1311, r1315		
Notice:	The voltage boost results in a higher motor temperature increase.		
Note:	The voltage boost when accelerating can improve the response to small, positive setpoint changes. Assigning priorities for the voltage boosts: refer to p1310		

r1315	Voltage boost total / U_boost total		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the total resulting voltage boost in volt.		
Dependency:	Refer to: p1310, p1311, p1312		

p1320[0...n]	U/f control programmable characteristic frequency 1 / Uf char f1		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the first point along the characteristic.		
Dependency:	Selects the freely programmable characteristic using p1300 = 3. The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point. Refer to: p1300, p1310, p1311, p1321, p1322, p1323, p1324, p1325, p1326, p1327		
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.		

p1321[0...n]	U/f control programmable characteristic voltage 1 / Uf char U1		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the first point along the characteristic.		
Dependency:	Selects the freely programmable characteristic using p1300 = 3. Refer to: p1310, p1311, p1320, p1322, p1323, p1324, p1325, p1326, p1327		
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.		
p1322[0...n]	U/f control programmable characteristic frequency 2 / Uf char f2		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the second point along the characteristic.		
Dependency:	The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point. Refer to: p1310, p1311, p1320, p1321, p1323, p1324, p1325, p1326, p1327		
p1323[0...n]	U/f control programmable characteristic voltage 2 / Uf char U2		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the second point along the characteristic.		
Dependency:	Refer to: p1310, p1311, p1320, p1321, p1322, p1324, p1325, p1326, p1327		
p1324[0...n]	U/f control programmable characteristic frequency 3 / Uf char f3		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the third point along the characteristic.		
Dependency:	The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point. Refer to: p1310, p1311, p1320, p1321, p1322, p1323, p1325, p1326, p1327		

p1325[0...n]	U/f control programmable characteristic voltage 3 / Uf char U3		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the third point along the characteristic.		
Dependency:	Refer to: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1326, p1327		
p1326[0...n]	U/f control programmable characteristic frequency 4 / Uf char f4		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	10000.00 [Hz]	0.00 [Hz]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the frequency of the fourth point along the characteristic.		
Dependency:	Selects the freely programmable characteristic using p1300 = 3. The following applies for the frequency values: p1320 <= p1322 <= p1324 <= p1326 Otherwise, a standard characteristic is used that contains the rated motor operating point. Refer to: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1325, p1327		
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. For output frequencies above p1326, the characteristic is extrapolated with the gradient between the characteristic points p1324/p1325 and p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.		
p1327[0...n]	U/f control programmable characteristic voltage 4 / Uf char U4		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]
Description:	The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310. This parameter specifies the voltage of the fourth point along the characteristic.		
Dependency:	Selects the freely programmable characteristic using p1300 = 3. Refer to: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1325, p1326		
Note:	Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.		

2 Parameters

2.2 List of parameters

p1330[0...n]	CI: U/f control independent voltage setpoint / Uf U_set independ.		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the voltage setpoint for U/f control with an independent voltage setpoint (p1300 = 19).		
Dependency:	Selects the U/f control with independent voltage setpoint via p1300 = 19. Refer to: p1300		

p1331[0...n]	Voltage limiting / U_lim		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: -	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.00 [Vrms]	2000.00 [Vrms]	1000.00 [Vrms]
Description:	Limiting the voltage setpoint. This means that the output voltage can be reduced with respect to the calculated maximum voltage r0071 and the start of field weakening.		
Note:	The output voltage is only limited if, as a result of p1331, the maximum output voltage (r0071) is fallen below.		

p1333[0...n]	U/f control FCC starting frequency / U/f FCC f_start		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	Sets the starting frequency at which FCC (Flux Current Control) is activated.		
Dependency:	The correct operating mode must be set (p1300 = 1, 6).		
Warning:	An excessively low value can result in instability.		
			
Note:	For p1333 = 0 Hz, the FCC starting frequency is automatically set to 6 % of the rated motor frequency.		

p1334[0...n]	U/f control slip compensation starting frequency / Slip comp start		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	Sets the starting frequency of the slip compensation.		
Note:	For p1334 = 0, the starting frequency of the slip compensation is automatically set to 6 % of the rated motor frequency.		

p1335[0...n]	Slip compensation scaling / Slip comp scal		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	600.0 [%]	0.0 [%]
Description:	Sets the setpoint for slip compensation in [%] referred to r0330 (motor rated slip). p1335 = 0.0 %: Slip compensation deactivated. p1335 = 100.0 %: The slip is completely compensated.		
Dependency:	Prerequisite for a precise slip compensation for p1335 = 100 % are the precise motor parameters (p0350 ... p0360). If the parameters are not precisely known, a precise compensation can be achieved by varying p1335. For U/f control modes with ECO optimization (p1300 = 4, 7), slip compensation must be activated in order to guarantee correct operation.		
Note:	The purpose of slip compensation is to maintain a constant motor speed regardless of the applied load. The fact that the motor speed decreases with increasing load is a typical characteristic of induction motors. For synchronous motors, this effect does not occur and the parameter has no effect in this case. For U/f control modes, for textile applications (p1300 = 5, 6), slip compensation is internally deactivated, allowing the output frequency to be precisely adjusted. If p1335 is changed during commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1335 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).		

p1336[0...n]	Slip compensation limit value / Slip comp lim val		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	600.00 [%]	250.00 [%]
Description:	Sets the limit value for slip compensation in [%] referred to r0330 (motor rated slip).		

r1337	CO: Actual slip compensation / Slip comp act val		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the actual compensated slip [%] referred to r0330 (rated motor slip).		
Dependency:	p1335 > 0 %: Slip compensation active. Refer to: p1335		

p1338[0...n]	U/f mode resonance damping gain / Uf Res_damp gain		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	0.00
Description:	Sets the gain for resonance damping for U/f control.		
Dependency:	Refer to: p1300, p1339, p1349		

2 Parameters

2.2 List of parameters

Note: The resonance damping function dampens active current oscillations that frequency occur under no-load conditions. The resonance damping is active in a range from approximately 6 % of the rated motor frequency (p0310). The shutoff frequency is determined by p1349.
For the open-loop control modes p1300 = 5 and 6 (textile sectors), the resonance damping is internally disabled in order that the output frequency can be precisely set.

p1339[0...n]	U/f mode resonance damping filter time constant / Uf Res_damp T		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.00 [ms]	1000.00 [ms]	20.00 [ms]
Description:	Sets the filter time constant for resonance damping for U/f control.		
Dependency:	Refer to: p1300, p1338, p1349		

p1340[0...n]	I_max frequency controller proportional gain / I_max_ctrl Kp		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	0.500	0.000
Description:	Sets the proportional gain of the I_max frequency controller. The I_max controller reduces the drive converter output current if the maximum current (r0067) is exceeded. In the U/f operating modes (p1300) for the I_max control, one controller is used that acts on the output frequency and one controller that acts on the output voltage. The frequency controller reduces the current by decreasing the converter output frequency. The frequency is reduced down to a minimum value (equaling twice rated slip). If the overcurrent condition cannot be successfully resolved using this measure, then the drive converter output voltage is reduced using the I_max voltage controller. Once the overcurrent condition has been resolved, the drive is accelerated along the ramp set in p1120 (ramp-up time).		
Dependency:	In the U/f modes (p1300) for textile applications and for external voltage setpoints, only the I_max voltage controller is used.		
Notice:	When deactivating the I_max controller, the following must be carefully observed: When the maximum current (r0067) is exceeded, the output current is no longer reduced. The drive is switched off when the overcurrent limits are exceeded.		
Note:	The I_max limiting controller becomes ineffective if the ramp-function generator is deactivated with p1122 = 1. p1341 = 0: I_max frequency controller deactivated and I_max voltage controller activated over the complete speed range.		

p1341[0...n]	I_max frequency controller integral time / I_max_ctrl Tn		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	50.000 [s]	0.300 [s]
Description:	Sets the integral time for the I_max frequency controller.		
Dependency:	Refer to: p1340		
Note:	When p1341 = 0, the current limiting controller influencing the frequency is deactivated and only the current limiting controller influencing the output voltage remains active (p1345, p1346).		

r1343	CO: I_max controller frequency output / I_max_ctrl f_outp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the effective frequency limit.		
Dependency:	Refer to: p1340		
r1344	I_max controller voltage output / I_max_ctrl U_outp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the amount by which the converter output voltage is reduced.		
Dependency:	Refer to: p1340		
p1345[0...n]	I_max voltage controller proportional gain / I_max_U_ctrl Kp		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 7017
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100000.000	0.000
Description:	Sets the proportional gain for the I_max voltage controller.		
Dependency:	Refer to: p1340		
Note:	The controller settings are also used in the current controller of the DC braking (refer to p1232).		
p1346[0...n]	I_max voltage controller integral time / I_max_U_ctrl Tn		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6300, 7017
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	50.000 [s]	0.030 [s]
Description:	Sets the integral time for the I_max voltage controller.		
Dependency:	Refer to: p1340		
Note:	The controller settings are also used in the current controller of the DC braking (refer to p1232). For p1346 = 0, the following applies: The integral time of the I_max voltage controller is deactivated.		

2 Parameters

2.2 List of parameters

r1348	CO: U/f control Eco factor actual value / Uf Eco fac act v		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300, 6301
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the economic factor determined for optimizing motor consumption.		
Dependency:	Refer to: p1335		
Note:	The value is only determined for operating modes with Economic (p1300 = 4, 7).		
<hr/>			
p1349[0...n]	U/f mode resonance damping maximum frequency / Uf res_damp f_max		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]
Description:	Sets the maximum output frequency for resonance damping for U/f control. Resonance damping is inactive above this output frequency.		
Dependency:	Refer to: p1338, p1339		
Note:	For p1349 = 0, the changeover limit is automatically set to 95 % of the rated motor frequency - however, to a max. of 45 Hz.		
<hr/>			
p1350[0...n]	U/f control soft start / U/f soft start		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets whether the voltage is continuously increased during the magnetizing phase (p1350 = 1, On) or whether it jumps directly to the voltage boost (p1350 = 0, Off).		
Value:	0: OFF 1: ON		
Dependency:	The function is not effective for p1300 = 15.		
Note:	The settings for this parameter have the following advantages and disadvantages: 0 = off (jump directly to voltage boost) Advantage: Flux is established quickly -> torque is quickly available Disadvantage: The motor can move while it is being magnetized 1 = on (voltage is continually established) Advantage: The motor is unlikely to rotate Disadvantage: The flux is established slower -> torque is available later		

p1351[0...n]	CO: Motor holding brake starting frequency / Brake f_start		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6310
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-300.00 [%]	300.00 [%]	0.00 [%]
Description:	Sets the frequency setting value at the slip compensation output for starting up with motor holding brake.		
Dependency:	When setting p1351 > 0, then slip compensation is automatically activated (p1335 = 100 %).		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	A value of 100% corresponds to the motor rated slip (r0330).		
p1356[0...n]	CI: U/f control angular setpoint / Uf ang setpoint		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the differential angular generation for U/f control.		
p1358[0...n]	Angular difference symmetrizing actual angle / Sym act angle		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the dead time for the symmetrizing of the actual angle value for the differential angular generation. The selected multiplier refers to the current controller clock cycle (dead time= p1358 * p0115[0]).		
r1359	CO: Angular difference / Angular difference		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the output of the differential angular generation.		
Note:	The difference between the setpoint angle, read-in in p1356 and the actual value of the U/f control delayed with p1358 is displayed.		

p1360	Braking chopper braking resistor cold / Br_chop R cold		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [ohm]	10.000 [ohm]	0.000 [ohm]
Description:	Sets the braking resistor for the braking chopper.		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1362, r1363, p1364 Refer to: A06921, F06922		
p1362[0...1]	Braking chopper activation threshold / Br_chop thresh		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [V]	1158 [V]	[0] 0 [V] [1] 60 [V]
Description:	Sets the activation threshold for the brake chopper. The hysteresis defines the range of the output voltage from zero up to the maximum voltage.		
Index:	[0] = Braking chopper threshold value [1] = Braking chopper hysteresis		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1360, r1363, p1364 Refer to: A06921, F06922		
r1363	CO: Braking chopper output voltage / Br_chop U_output		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual power unit output voltage (Motor Module) in braking chopper operation.		
Dependency:	Select operation with braking resistor: p1300 = 15 Refer to: p1360, p1362, p1364 Refer to: A06921, F06922		
p1364	Braking chopper resistor asymmetry / Br_chop R asym		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: V/f open-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	25.00 [%]
Description:	Sets the percentage value for the asymmetry detection for the braking chopper. The ripple of the absolute current r0068 is monitored. The reference value is the average value of the absolute current. The minimum monitoring value is 10 % of the power unit rated current.		

Dependency: Select operation with braking resistor: p1300 = 15
Refer to: p1360, p1362, r1363
Refer to: F06922

Note: For p1364 = 0, asymmetry identification is deactivated.
Asymmetry can also be displayed if the absolute current manifests ripple, caused by load-related ripple of the DC link voltage. In this particular case, p1364 must be increased.

r1369[0] CO: Phase current actual value filtered / I_ph act val filt

VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6300
	P-Group: V/f open-loop control	Unit group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]

Description: Displays the measured actual phase currents as peak value.
This value is averaged for the display in the speed controller sampling time (p0115[1]).

Index: [0] = Phase U

Dependency: The signal is only displayed in operating mode p1300 = 19 (U/f control with independent voltage setpoint) and is used to control DC currents (e.g. for excitation (field) controllers).

p1381[0...n] U/f control modulation limit reduction / U/f mod_lim reduce

VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
		CALC_MOD_LIM_REF	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6723
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	40.0 [%]	0.0 [%]

Description: Reduction of the maximum modulation depth when compared to r0073 to reduce the maximum output voltage r0071.
The maximum modulation depth is reduced no more than the ideal overcontrol limit of 100 %.

Note: If p1803 is increased for operation with closed-loop speed/torque control, then the modulation limit for operation with U/f control can in turn be reduced in order to avoid overcontrol and the associated current ripple.

p1400[0...n] Speed control configuration / n_ctrl config

VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 6490
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 1000 0000 0010 0001 bin

Description: Sets the configuration for the closed-loop speed control.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Automatic Kp/Tn adaptation active	Yes	No	6040
	01	Sensorless vector control freeze I comp	Yes	No	6040
	02	Acceleration precontrol signal source	External (p1495)	Internal (n_set)	6031
	03	Reference model speed setpoint I component	ON	OFF	6031
	05	Kp/Tn adaptation active	Yes	No	6040
	06	Free Tn adaptation active	Yes	No	6050
	14	Torque precontrol	Always active	For n_ctrl enab	6060
	15	Sensorless vector control speed precontrol	Yes	No	6030
	16	I component for limiting	Enable	Hold	6030
	18	Moment of inertia estimator active	Yes	No	6030
	19	Anti-windup for integral component	Yes	No	6030

2 Parameters

2.2 List of parameters

20	Acceleration model	ON	OFF	6031
22	Obtain moment of inertia estimator value for pulse inhibit	Yes	No	6030
23	Acceleration model (with speed encoder)	Yes	No	6030
24	Moment of inertia estimator fast estimation active	Yes	No	6030
25	Acceleration torque instantaneous in the I/f mode	Yes	No	-

Note:

For bit 01:

When the bit is set, the I component of the speed controller is kept when changing into the open-loop controlled mode.

For bit 16:

When the bit is set, the integral component of the speed controller is only held if it reaches the torque limit.

For bit 19:

When this bit is set, speed overshoots when accelerating along the torque limit and for load surges are reduced. If the setpoint torque reaches the torque limit, then the integral component is set to the difference between the torque limit and P component.

For bits 20, 23:

The acceleration model for the speed setpoint is only active if p1496 is not zero. When the acceleration model and the ramp-function generator (p1145) are simultaneously activated, it is recommended that p1400 bit 16 is set (this allows the I component to run freely up to the torque limit).

For bit 24:

When the bit is set, assuming that the motor accelerates smoothly, the moment of inertia can be determined faster.

For bit 25:

When the bit is set, for high dynamic starting in the I/f mode, the acceleration precontrol torque smoothing only has a short minimum time (4 ms).

p1401[0...n]

Flux control configuration / Flux ctrl config

VECTOR_G (n/M)

Can be changed: U, T

Calculated: -

Access level: 3

Data type: Unsigned16

Dyn. index: DDS, p0180

Func. diagram: 6491

P-Group: Closed-loop control

Unit group: -

Unit selection: -

Not for motor type: REL

Scaling: -

Expert list: 1

Min

Max

Factory setting

-

-

0000 0000 0000 1110 bin

Description:

Sets the configuration for flux setpoint control

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Flux setpoint soft starting active	Yes	No	6722, 6725
01	Flux setpoint differentiation active	Yes	No	6723, 6726
02	Flux build-up control active	Yes	No	6722, 6723, 6725, 6726
03	Flux characteristic load-dependent	Yes	No	6725
04	Flux controller (ASM with encoder)	Yes	No	-
05	Flux impression (ASM with encoder)	with model chngov	From 30 % n _{rated}	-
06	Quick magnetizing	Yes	No	6722
07	Precontrol speed limitation	Yes	No	6640
08	Speed limiting controller	With M _{limits}	With I _{limits}	6640
09	Dynamic load-dependent flux boost	Yes	No	6790, 6823
10	Flux boost low speed	Yes	No	6790, 6823
13	Precontrol characteristic (PESM)	Yes	No	-
14	Efficiency optimization 2 active	Yes	No	6722, 6837

Note:

For bit 00 (only for induction motors):

Initially, the flux is only established with a low rate of rise when magnetizing the induction motor. The flux setpoint p1570 is reached again at the end of the magnetizing time p0346.

For bit 01 (only for induction motors and separately excited synchronous motors):

The flux differentiation can be switched out if a significant ripple occurs in the field-generating current setpoint (r0075) when entering the field weakening range. However, this is not suitable for fast acceleration operations because then, the flux decays more slowly and the voltage limiting responds.

For bit 02 (only for induction motors):

The flux build-up control operates during the magnetizing phase p0346 of the induction motor. If it is switched out, a constant current setpoint is injected and the flux is built up corresponding to the rotor time constant. When quick magnetizing (p1401.6 = 1) is selected and when flux build-up control is de-energized alarm A07416 is displayed.

For bit 03:

Separately excited synchronous machine: flux characteristic is calculated as a function of the load.

Synchronous-reluctance motor (RESM): activation of the load-dependent optimum flux characteristic.

For bit 04 (only for induction motors with encoder):

The flux controller does not operate in the range of the current model and not in the range of the flux impression (refer to p1750.4).

For bit 05 (only for induction motors with encoder):

Extremely rugged control operation is possible by directly toggling between the current model and flux impression. We therefore recommend that, in addition, the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).

For bit 06 (not for induction motors):

Magnetizing is carried out with the maximum current ($0.9 * r0067 \leq p1603 * r0209$). Magnetization has been completed if the flux threshold value p1573 or the magnetizing time p0346 has been reached. With active identification of the stator resistance (see p0621) quick magnetizing is internally deactivated and alarm A07416 is displayed. During a flying restart of a rotating motor (see p1200) no quick magnetizing takes place.

For bit 07:

If the speed of the drive exceeds the effective speed limit of the speed limiting controller, the torque limit is reduced linearly to zero as the deviation becomes greater. This reduces the integral component of the speed controller and, in turn, the overshoot during load shedding (see also F07901 and p2162).

For bit 08:

The speed limiting controller sets the speed to maximum by opening the torque limits as far as the current limits (bit 8 = 0) or taking the torque limits into account (bit 8 = 1).

For bit 09:

Synchronous reluctance motor (RESM):

Dynamic increase in the flux setpoint when torque is quickly established.

For bit 10:

Synchronous reluctance motor (RESM):

For load-dependent optimum flux characteristic (p1401.3 = 1) the flux setpoint is increased at low speeds.

Flux boost at low speeds is not effective when using an encoder - or for encoderless operation with HF signal injection (p1750.5).

For bit 13:

PESM: activation of the load-dependent precontrol characteristic

For bit 14:

When the function is activated, the following applies:

- the optimum flux is calculated and the power loss is entered for optimization purposes
- the efficiency optimization (p1580) is not active.

It only makes sense to activate this function if the dynamic response requirements of the speed controller are low. In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase T_n , reduce K_p). Further, the smoothing time of the flux setpoint filter (p1582) should be increased.

p1402[0...n]		Closed-loop current control and motor model configuration / I_ctrl config			
VECTOR_G (n/M)	Can be changed: U, T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0001 bin		
Description:	Sets the configuration for the closed-loop control and the motor model.

Note:

For bit 11:

For operation with speed encoder, this bit is set as a result of steps/jumps in the speed signal (see p0492) or due to deviations at the adaptation controller output (see p1744).

2 Parameters

2.2 List of parameters

p1416[0...n]	Speed setpoint filter 1 time constant / n_set_filt 1 T		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	5000.00 [ms]	0.00 [ms]
Description:	Sets the time constant for the speed setpoint filter 1 (PT1).		
p1428[0...n]	Speed precontrol symmetrizing dead time / n_prectrSym t_dead		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	3.0	0.0
Description:	Sets the dead time to symmetrize the speed setpoint for active torque precontrol. The selected multiplier refers to the sampling time of the speed controller (dead time= p1428 * p0115[1]).		
Dependency:	In conjunction with p1429, this parameter can emulate the characteristics of how the torque is established (dynamic response of closed current control loop). The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, a fixed dead time is used. Refer to: p1429, p1511		
p1429[0...n]	Speed precontrol symmetrizing time constant / n_prectr sym T		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5030, 5042, 5210, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	0.00 [ms]
Description:	Sets the time constant (PT1) for symmetrizing the speed setpoint for active torque precontrol.		
Dependency:	In conjunction with p1428, this parameter can emulate the characteristics of how torque is established (dynamic response of the closed current control loop). For VECTOR (r0107) the following applies: The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, time constant p1442 (or p1452 for sensorless vector control) is used. Refer to: p1428, p1511		
r1431	CO: Speed precontrol to motor model / n_prectrl mot_mod		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6030
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed setpoint to precontrol the motor model for sensorless vector control.		
Note:	With p1400.15 = 0 or encoderless torque control, the precontrol signal is kept continuously in the range of the voltage model.		

p1433[0...n]	Speed controller reference model natural frequency / n_ctrl RefMod fn		
VECTOR_G (J_estimator / OBT, n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.0 [Hz]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 8000.0 [Hz]	Access level: 3 Func. diagram: 6031 Unit selection: - Expert list: 1 Factory setting 0.0 [Hz]
Description:	Sets the natural frequency of a PT2 element for the reference model of the speed controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	Together with p1434 and p1435, the characteristics (in the time domain) of the closed-loop speed control (P) can be emulated. For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1. For sensorless vector control (p1300 = 20) the reference model is disabled in open-loop speed controlled operation (refer to p1755). Refer to: p1434, p1435		
p1434[0...n]	Speed controller reference model damping / n_ctrl RefMod D		
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.000	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 5.000	Access level: 3 Func. diagram: 5030, 6031 Unit selection: - Expert list: 1 Factory setting 1.000
Description:	Sets the damping of a PT2 element for the reference model of the speed controller.		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	In conjunction with p1433 and p1435, the characteristics (in time) of the P-controlled speed control loop can be emulated. For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1. Refer to: p1433, p1435		
p1435[0...n]	Speed controller reference model dead time / n_ctrRefMod t_dead		
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 3.00	Access level: 2 Func. diagram: 5030, 6031 Unit selection: - Expert list: 1 Factory setting 0.00
Description:	Sets the "fractional" dead time for the reference model of the speed controller. This parameter emulates the computing dead time of the proportionally controlled speed control loop. The selected multiplier refers to the speed controller sampling time (dead time= p1435 * p0115[1]).		
Recommendation:	The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.		
Dependency:	In conjunction with p1433 and p1434, the characteristics (in time) of the P-controlled speed control loop can be emulated. For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1. Refer to: p0115, p1433, p1434		

r1436	CO: Speed controller reference model speed setpoint output / RefMod n_set outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5030, 6031
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the speed setpoint at the output of the reference model.		
Dependency:	For VECTOR (r0107) the following applies: The reference model is activated with p1400.3 = 1.		
p1437[0...n]	CI: Speed controller reference model I component input / n_ctrRefMod I_comp		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	1436[0]
Description:	Sets the signal source for speed setpoint for the integral component of the speed controller.		
Dependency:	The reference model is activated with p1400.3 = 1. Refer to: p1400		
Notice:	It should be ensured that a speed setpoint is selected as signal source that corresponds to the setpoint for the P component of the speed controller.		
r1438	CO: Speed controller speed setpoint / n_ctrl n_set		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3001, 5019, 5030, 5042, 5210, 6020, 6031
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output of the speed setpoint after setpoint limiting for the P component of the speed controller. For U/f operation, the value that is displayed is of no relevance.		
Dependency:	Refer to: r1439		
Note:	In the standard state (the reference model is deactivated), r1438 = r1439.		
r1439	Speed setpoint I component / n_set I_comp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5030, 5040, 6031
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the speed setpoint for the I component of the speed controller (output of the reference model after the setpoint limiting).		
Dependency:	Refer to: r1438		
Note:	In the standard state (the reference model is deactivated), r1438 = r1439.		

p1440[0...n]	CI: Speed controller speed actual value input / n_ctrl n_act		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	63[0]
Description:	Sets the signal source for the speed actual value of the speed controller.		
Dependency:	Refer to: r1443		
Danger:	When using external speed actual values for the speed controller, for a direction of rotation change via p1821 = 1, then its polarity must also be changed (e.g. for an encoder DO via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.		
			
Caution:	Speed control with encoder (p1300 = 21):		
	For the speed or position signal of the motor model there must always be a motor encoder available (evaluation via SMC/SMI, see p0400). The actual speed of the motor (r0061) and the position data for synchronous motors continue to come from this motor encoder and are not affected by the setting of p1440.		
	Interconnection of p1440:		
	If connector input p1440 is interconnected with an external speed actual value, the identical scaling of the speed should be observed (p2000).		
Notice:	Speed control without encoder (p1300 = 20):		
	Dependent upon the transmission path of the external speed signal there will be dead times which have to be taken into account when setting the speed controller parameters (p1470, p1472) and can lead to dynamic losses accordingly. It is for this reason that signal transmission times have to be kept as low as possible.		
	So that the speed controller can also work at standstill, set p1750.2 = 1 (closed-loop operation from zero speed for passive loads). If you do not make this setting, operation will switch to open-loop speed control in the low speed range, switching the closed-loop speed controller off and rendering the measured actual speed ineffective.		
Note:	Speed control with encoder (p1300 = 21):		
	An external speed signal should, on the average, correspond to the speed of the motor encoder (r0061).		
p1441[0...n]	Actual speed smoothing time / n_act T_smooth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4710, 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the speed actual value.		
Dependency:	Refer to: r0063		
Notice:	Smoothing times above 20 ms are only possible if the drive is accelerated or braked with the appropriately long ramp-up/ramp-down times. Otherwise, significant torque errors can occur and there is the danger that the drive is switched off (tripped) with F07902 (motor stalled).		
Note:	The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.		
	After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).		
p1442[0...n]	Speed controller speed actual value smoothing time / n_ctr n_act T_smth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	32000.00 [ms]	4.00 [ms]
Description:	Sets the smoothing time for the actual speed value of the speed controller for closed-loop control with encoder.		
Note:	The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).		

r1443	CO: Speed controller speed actual value at actual value input / n_ctrl n_act inp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the speed actual value at the speed controller's free-wiring actual value input p1440.		
Dependency:	Refer to: p1440		
Note:	This speed signal is only used by the speed controller and not by the motor model.		

r1444	Speed controller speed setpoint steady-state (static) / n_ctrl n_set stat		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5030
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the sum of all speed setpoints that are present. The following sources are available for the displayed setpoint:		
	- setpoint at the ramp-function generator input (r1119).		
	- speed setpoint 1 (p1155).		
	- speed setpoint 2 (p1160).		
	- speed setpoint for the speed precontrol (p1430).		
	- setpoint from DSC (for DSC active).		
	- setpoint via PC (for master control active).		
Dependency:	Refer to: r1119, p1155, p1160		

r1445	CO: Actual speed smoothed / n_act smooth		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the actual smoothed speed actual value of the speed control.		

p1451[0...n]	Motor model speed actual value smoothing time sensorless / Mot_mod n_act t_sm		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	4 [ms]
Description:	Sets the smoothing time for the speed actual value calculated by the motor model in sensorless operation.		

p1452[0...n]	Speed controller speed actual value smoothing time (sensorless) / n_C n_act T_s SL		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	32000.00 [ms]	10.00 [ms]
Description:	Sets the smoothing time for the actual speed of the speed controller for encoderless closed-loop speed control.		
Note:	The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).		
r1454	CO: Speed controller system deviation I component / n_ctrl sys dev Tn		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Display and connector output for the system deviation of the I component of the speed controller. When the reference model is inactive (p1433 = 0 Hz), this parameter corresponds to the system deviation of the complete PI controller (r1454 = r0064).		
p1455[0...n]	CI: Speed controller P gain adaptation signal / n_ctr adapt_sig Kp		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the source for the adaptation signal to additionally adapt the P gain of the speed controller.		
Dependency:	Refer to: p1456, p1457, p1458, p1459		
p1456[0...n]	Speed controller P gain adaptation lower starting point / n_ctrl AdaptKpLow		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	400.00 [%]	0.00 [%]
Description:	Sets the lower starting point of the adaptation range for the additional adaptation of the P gain of the speed controller. The values are in % and refer to the set source of the adaptation signal.		
Dependency:	Refer to: p1455, p1457, p1458, p1459		
Note:	If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.		

2 Parameters

2.2 List of parameters

p1457[0...n]	Speed controller P gain adaptation upper starting point / n_ctrl AdaptKp up		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	400.00 [%]	0.00 [%]
Description:	Sets the upper starting point of the adaptation range for the additional adaptation of the P gain of the speed controller. The values are in % and refer to the set source of the adaptation signal.		
Dependency:	Refer to: p1455, p1456, p1458, p1459		
Note:	If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.		
p1458[0...n]	Adaptation factor lower / Adapt_factor lower		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the adaptation factor before the adaptation range (0 % ... p1456) to additionally adapt the P gain of the speed/velocity controller.		
Dependency:	Refer to: p1455, p1456, p1457, p1459		
Note:	If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.		
p1459[0...n]	Adaptation factor upper / Adapt_factor upper		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.		
Dependency:	Refer to: p1455, p1456, p1457, p1458		
Note:	If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.		
p1460[0...n]	Speed controller P gain adaptation speed lower / n_ctrl Kp n lower		
VECTOR_G (J_estimator / OBT, n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0000	999999.0000	0.3000
Description:	Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).		
Dependency:	For p0528 = 1, the speed controller gain is represented without any dimensions. Refer to: p1461, p1464, p1465		

p1461[0...n]	Speed controller Kp adaptation speed upper scaling / n_ctr Kp n up scal		
VECTOR_G (J_estimator / OBT, n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the P gain of the speed controller for the upper adaptation speed range (> p1465). The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).		
Dependency:	Refer to: p1460, p1464, p1465		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition p1464, then the controller gain below p1465 is adapted with p1461. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		
p1462[0...n]	Speed controller integral time adaptation speed lower / n_ctrl Tn n lower		
VECTOR_G (J_estimator / OBT, n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5040, 5042, 6020, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100000.00 [ms]	20.00 [ms]
Description:	Sets the integration time of the speed controller before the adaptation speed range (0 ... p1464). This value corresponds to the basic setting of the integral time of the speed controller without adaptation (p1461 = 100 %).		
Dependency:	Refer to: p1463, p1464, p1465		
Note:	The integral component is stopped if the complete controller output or the sum of controller output and torque precontrol reach the torque limit.		
p1463[0...n]	Speed controller Tn adaptation speed upper scaling / n_ctr Tn n up scal		
VECTOR_G (J_estimator / OBT, n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200000.0 [%]	100.0 [%]
Description:	Sets the integral time of the speed controller after the adaptation speed range (> p1465). The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).		
Dependency:	Refer to: p1462, p1464, p1465		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller integral time below p1465 is adapted with p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		

p1464[0...n]	Speed controller adaptation speed lower / n_ctrl n lower		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6050
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the lower adaptation speed of the speed controller. No adaptation is effective below this speed.		
Dependency:	The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made. Refer to: p1460, p1461, p1462, p1463, p1465		
Note:	If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.		
p1465[0...n]	Speed controller adaptation speed upper / n_ctrl n upper		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	100000.0 [ms]	20.0 [ms]
Description:	Set the integral time for encoderless operation for the speed controller.		
Note:	The integral component is stopped if the complete controller output or the sum of controller output and torque precontrol reach the torque limit.		

p1475[0...n]	CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the torque setting value when starting up with motor holding brake.

Recommendation: The offset for the torque limiting p1532 can be used as torque setting value.

Sensorless vector control:

To hold the actual torque when stopping the motor, you are advised to set p1400.1 = 1. As a result, the integral component of the speed controller is frozen when changing to the open-loop controlled operating range.

Dependency: The switching in of the torque setting value for the motor holding brake has a higher priority than the setting of the integrator value using p1477 and p1478.

Note: The setting of the integral output of the speed controller begins after magnetizing (see p0346, r0056.4) and ends at the end of the brake control opening time p1216.

A setting value of zero means that no setting procedure will take place.

p1476[0...n]	BI: Speed controller hold integrator / n_ctrl integ stop		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3

Description: Sets the signal source to hold the integrator for the speed controller.

p1477[0...n]	BI: Speed controller set integrator value / n_ctrl integ set		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2520, 5040, 5042, 5210, 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to set the integrator setting value (p1478).

Dependency: Refer to: p1478, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For the interface mode "SIMODRIVE 611 universal" (p2038 = 1), p1477 and p1478 are used for the signal STW2.6 (integrator inhibit, speed controller).

p1478[0...n]	CI: Speed controller integrator setting value / n_ctr integ_setVal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6040
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the integrator setting value for the velocity controller.

The signal to set this integrator setting value is interconnected via p1477.

Dependency:	The setting value of the speed controller integrator is weighted with the scaling factor of the signal source in p1479. If p1478 is interconnected to the integral output of the speed controller (r1482), then after the magnetizing time (r0346) and if the speed controller is enabled, the integral component of the controller is set to the last value before the pulse inhibit. This value is set if no setting command (p1477) is interconnected or, at the instant that the pulses were inhibited, a setting command is available, which is not deactivated up to the next time that the pulses are inhibited. For sensorless vector control, in addition p1400.1 should be set to 1 so that when the drive is stopped, the integral component of the speed controller is not controlled down to zero. In order that when setting the integrator output, only the static torque is detected, we recommend that the accelerating torque is completely precontrolled (e.g. p1496). If p1478 is interconnected to another output other than r1482, then after magnetizing and speed controller enable, the integral output is set once if the setting command is not interconnected (p1477 = 0). Refer to: p1477, p1479
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1479[0...n]	CI: Speed controller integrator setting value scaling / n_ctrl I_val scal

	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the compensation torque to be output within the droop calculation. This parameter should be interconnected with the torque setpoint of the drive (corresponding to the selection p1488), with which load equalization should be performed.		

p1487[0...n]	Droop compensation torque scaling / Droop M_comp scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-2000.0 [%]	2000.0 [%]	100.0 [%]
Description:	Sets the scaling for the compensation torque within the droop calculation.		

p1488[0...n]	Droop input source / Droop input source		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the source for droop feedback. With increasing torque, the speed setpoint is reduced (enabled using p1492), so that for mechanically coupled drives a load equalization (load compensation) is obtained. A load difference compensation is also possible, if p1486 is interconnected with the torque setpoint of the other drive.		
Value:	0: Droop feedback not connected 1: Droop from torque setpoint 2: Droop from speed controller output 3: Droop from integral output speed controller		
Dependency:	Refer to: p1486, p1487, p1489, r1490, p1492		
Caution:	For active acceleration precontrol of the speed controller (refer to p1496), it is not recommended that p1488 is set to 1, as this could result in positive coupling effects. Instead of this, as source of the droop feedback, the output signal of the speed controller should be used, which generally sets the load torque.		
			

p1489[0...n]	Droop feedback scaling / Droop scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6030

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	0.500	0.050
Description:	Sets the scaling for the droop feedback		
Dependency:	Refer to: p1486, p1487, p1488, r1490, p1492		
Note:	Example: A value of 0.05 means that for a torque equal to the rated motor torque, the rated motor speed is reduced by 5 %.		

r1490	CO: Droop feedback speed reduction / Droop n_reduction		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6030
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]
Description:	Displays the output signal of the droop calculation. The droop feedback result is subtracted from the speed setpoint when activated (p1492).		
Dependency:	Refer to: p1486, p1487, p1488, p1489, p1492		
p1492[0...n]	BI: Droop feedback enable / Droop enable		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2520, 6030
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Enables the droop to be applied to the speed/velocity setpoint.		
Dependency:	Refer to: p1486, p1487, p1488, p1489, r1490		
Note:	Even when not enabled, the droop speed is calculated but not subtracted from the setpoint speed. This makes it possible to subtract the result of this calculation from the speed of another drive.		
r1493	CO: Moment of inertia total, scaled / M_inert tot scal		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: 25_1	Unit selection: p0100
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kgm ²]	- [kgm ²]	- [kgm ²]
Description:	Display and connector output for the parameterized total moment of inertia. The value is calculated as follows: (p0341 * p0342) + p1496 The scaling is not take into account using p1497.		
p1495[0...n]	CI: Acceleration precontrol / a_prectrl		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2007	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the acceleration precontrol.		
Dependency:	The signal source for the acceleration is activated with p1400.2 = 1. For p1400.2 = 0, the acceleration precontrol is calculated from the speed setpoint change from r0062. For p1400.2 = 0 and activate reference model (p1400.3 = 1) the acceleration precontrol is switched out. Refer to: p1400, p1496		
Note:	If the acceleration is entered as external signal, then the accelerating torque is calculated as follows (r1518): $r1518 = \text{acceleration} (\% \text{ of } p2007) / 100 \% * (p2007 * 60 \text{ s}) / p0311 * r0345 / 1 \text{ s} * r0333$		

p1496[0...n]	Acceleration precontrol scaling / a_prectrl scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6031
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	10000.0 [%]	0.0 [%]
Description:	Sets the scaling for the acceleration precontrol of the speed/velocity controller.		
Dependency:	When the reference model is activated (p1400.3 = 1) and for an internal acceleration precontrol (p1400.2 = 0), the acceleration precontrol is switched out (disabled). The reference model (p1400.3 = 1) and external acceleration precontrol (p1400.2 = 1) can be operated together. Refer to: p0341, p0342		
Warning:	The acceleration precontrol r1518 is kept at the old value if the ramp-function generator tracking (r1199.5) is active or the ramp-function generator output is set (r1199.3). This is used to avoid torque peaks. Depending on the application, it may therefore be necessary to disable the ramp-function generator tracking (p1145 = 0) or the acceleration precontrol (p1496 = 0).		
			
Note:	The acceleration precontrol is set to zero, if the Vdc control is active (r0056.14/15). The parameter is set to 100% by the rotating measurement (refer to p1960). The acceleration precontrol may not be used if the speed setpoint manifests significant ripple (e.g. analog setpoint) and the rounding-off in the speed ramp-function generator is disabled. We also recommend that the precontrol mode is not used if there is gearbox backlash.		
p1497[0...n]	CI: Moment of inertia scaling signal source / M_inert scal s_src

	Min	Max	Factory setting
	0.0 [%]	400.0 [%]	100.0 [%]
Description:	Sets the scaling for the acceleration integrator at low speeds (only for encoderless torque control).		
Dependency:	Refer to: p0341, p0342		

p1500[0...n]	Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set		
VECTOR_G	Can be changed: C2(1), T Data type: Unsigned32 P-Group: Commands Not for motor type: REL Min 0	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max 999999	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Runs the corresponding macro files. The Connector Inputs (CI) for the torque setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected. The selected macro file must be available on the memory card/device memory. Example: p1500 = 6 --> the macro file PM000006.ACX is run.		
Dependency:	Refer to: p0015, p0700, p1000, r8573		
Notice:	No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group! When executing a specific macro, the corresponding programmed settings are made and become active.		
Note:	The macros in the specified directory are displayed in r8573. r8573 is not in the expert list of the commissioning tool. Macros available as standard are described in the technical documentation of the particular product. CI: Connector Input		
p1501[0...n]	BI: Change over between closed-loop speed/torque control / Changeov n/M_ctrl		
VECTOR_G (n/M)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2520, 6020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for toggling between speed and torque control. 0 signal: Closed-loop speed control 1 signal: Closed-loop torque control		
Dependency:	The input connectors to enter the torque are provided using p1511, p1512 and p1513. Refer to: p1300		
Notice:	If the closed-loop torque control is not activated (p1300) and a change is made to closed-loop torque control (p1501), OFF1 (p0840) does not have its own braking response but pulse suppression when standstill is detected (p1226, p1227).		
Note:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
p1502[0...n]	BI: Freeze moment of inertia estimator / J_estim freeze		
VECTOR_G (n/M)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Closed-loop control Not for motor type: REL Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to freeze the estimated moment of inertia. 0 signal: Moment of inertia estimator active 1 signal: Determined moment of inertia frozen.		
Dependency:	Refer to: p1300		
Note:	Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1) and p1400.18 = 1. For operation with encoder, p1400.23 must also be set to 1.		

2 Parameters

2.2 List of parameters

p1503[0...n]	CI: Torque setpoint / M_set		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the torque setpoint for torque control.		
Note:	A change is made to closed-loop torque control if, in p1300, closed-loop torque control was selected or if the selection was made using the changeover source in p1501. it is also possible to change over in operation using p1501.		
r1508	CO: Torque setpoint before supplementary torque / M_set bef. M_suppl		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6030, 6060, 6722
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the torque setpoint before entering the supplementary torque. For closed-loop speed control, r1508 corresponds to the speed controller output; for closed-loop torque control, r1508 corresponds to the torque setpoint of the signal source assigned in p1503.		
p1511[0...n]	CI: Supplementary torque 1 / M_suppl 1		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for supplementary torque 1.		
p1512[0...n]	CI: Supplementary torque 1 scaling / M_suppl 1 scal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 5060, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for scaling the supplementary torque 1.		
p1513[0...n]	CI: Supplementary torque 2 / M_suppl 2		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for supplementary torque 2.		

p1514[0...n]	Supplementary torque 2 scaling / M_suppl 2 scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-2000.0 [%]	2000.0 [%]	100.0 [%]
Description:	Sets the scaling for supplementary torque 2.		
r1515	Supplementary torque total / M_suppl total		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the total supplementary torque. The displayed value is the total of supplementary torque values 1 and 2 (p1511, p1512, p1513, p1514).		
r1516	CO: Supplementary torque and acceleration torque / M_suppl + M_accel		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the total supplementary torque and the accelerating torque. The displayed value is the total of the smoothed supplementary torque and the accelerating torque (p1516 = p1518[1] + r1515).		
p1517[0...n]	Accelerating torque smoothing time constant / M_accel T_smooth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5042, 5210, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	100.00 [ms]	4.00 [ms]
Description:	Sets the smoothing time constant of the accelerating torque.		
Note:	For servo drives, the following applies: - For p1402.4 = 1, the highest dynamic performance is achieved with p1517 = 0 ms. - in encoderless operation, p1517 should be set >= 0.5 ms; for an induction motor with current displacement rotor p1517 >= 20 ms is recommended. For vector drives, the following applies: - the acceleration precontrol is inhibited if the smoothing is set to the maximum value.		

r1518[0...1]	CO: Accelerating torque / M_accel		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the accelerating torque for precontrol of the speed controller.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p0341, p0342, p1496		
p1520[0...n]	CO: Torque limit upper / M_max upper		
VECTOR_G (n/M)	Can be changed: U, T	Calculated:	Access level: 2
		CALC_MOD_LIM_REF	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6630
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-1000000.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]
Description:	Sets the fixed, upper torque limit.		
Dependency:	Refer to: p1521, p1522, p1523, r1538, r1539		
Danger:	Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.		
			
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).		
p1521[0...n]	CO: Torque limit lower / M_max lower		
VECTOR_G (n/M)	Can be changed: U, T	Calculated:	Access level: 2
		CALC_MOD_LIM_REF	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6020, 6630
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-20000000.00 [Nm]	1000000.00 [Nm]	0.00 [Nm]
Description:	Sets the fixed, lower torque limit.		
Dependency:	Refer to: p1520, p1522, p1523, p1532		
Danger:	Positive values when setting the lower torque limit (p1521 > 0) can result in the motor accelerating in an uncontrollable fashion.		
			
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).		

p1522[0...n]	CI: Torque limit upper / M_max upper		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	1520[0]
Description:	Sets the signal source for the upper torque limit.		
Dependency:	Refer to: p1520, p1521, p1523		
Danger:	Negative values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.		
			

p1523[0...n]	CI: Torque limit lower / M_max lower		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	1521[0]
Description:	Sets the signal source for the lower torque limit.		
Dependency:	Refer to: p1520, p1521, p1522		
Danger:	Positive values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.		
			

p1524[0...n]	CO: Torque limit upper scaling / M_max upper scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-2000.0 [%]	2000.0 [%]	100.0 [%]
Description:	Sets the scaling for the upper torque limit.		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	This parameter can be freely interconnected. The value has the meaning stated above if it is interconnected from connector input p1528.		

p1525[0...n]	CO: Torque limit lower scaling / M_max lower scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-2000.0 [%]	2000.0 [%]	100.0 [%]
Description:	Sets the scaling for the lower torque limit.		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	This parameter can be freely interconnected. The value has the meaning stated above if it is interconnected from connector input p1528.		

r1526	CO: Total upper torque limit / M_max upper total		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6060, 6630, 6640
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the upper torque limit of all torque limits.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529		

r1527	CO: Total lower torque limit / M_max lower total		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6060, 6630, 6640
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the lower torque limit of all torque limits.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529		

p1528[0...n]	CI: Torque limit upper scaling / M_max upper scal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1524[0]
Description:	Sets the signal source for the scaling of the upper torque limit in p1522.		
Danger:	For p1400.4 = 0 (torque limiting, upper/lower) the following applies: Negative values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p1529[0...n]	CI: Torque limit lower scaling / M_max lower scal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1525[0]
Description:	Sets the signal source for the scaling of the lower torque limit in p1523.		
Danger:	For p1400.4 = 0 (torque limiting, upper/lower) the following applies: Positive values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.		
			
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		

p1530[0...n]	Power limit motoring / P_max mot		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6640
	P-Group: Closed-loop control	Unit group: 14_5	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [kW]	Max 100000.00 [kW]	Factory setting 0.00 [kW]
Description:	Sets the power limit when motoring.		
Dependency:	Refer to: p0500, p1531		
Note:	The power limit is limited to 300% of the rated motor power.		
p1531[0...n]	Power limit regenerative / P_max gen		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6640
	P-Group: Closed-loop control	Unit group: 14_5	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min -100000.00 [kW]	Max -0.01 [kW]	Factory setting -0.01 [kW]
Description:	Sets the regenerative power limit.		
Dependency:	Refer to: p0500, p1530		
Note:	The power limit is limited to 300% of the rated motor power. For power units without regenerative feedback into the line supply, the regenerative power limit is pre-set to 30% of the motoring power limit p1530 and in the ratio rated drive converter power to rated motor power. If a braking resistor is connected to the DC link, then the power limit can be correspondingly increased.		
p1532[0...n]	CO: Torque limit offset / M_max offset		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5620, 5630, 5650, 7010, 8012
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min -100000.00 [Nm]	Max 100000.00 [Nm]	Factory setting 0.00 [Nm]
Description:	Sets the torque offset for the torque limit. The setting allows electronic weight equalization to be used for vertical axes.		
Recommendation:	The torque offset can also be used for torque precontrol or as integrator setting value for the speed controller.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529		
Danger:	If the offset is set higher/lower than the lower/upper torque limit, then the unloaded drive can accelerate up to the maximum speed.		
			
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
r1533	Current limit torque-generating total / Iq_max total		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6640
	P-Group: Displays, signals	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL	Scaling: p2002	Expert list: 1
	Min - [Arms]	Max - [Arms]	Factory setting - [Arms]
Description:	Displays the maximum torque/force generating current as a result if all current limits.		

r1534	CO: Total upper torque limit / M_max upper total		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5609, 5620, 5630, 5640
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the upper torque limit of all torque limits.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529, p1532		
r1535	CO: Total lower torque limit / M_max lower total		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5609, 5620, 5630, 5640
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the lower torque limit of all torque limits.		
Dependency:	Refer to: p1520, p1521, p1522, p1523, p1528, p1529, p1532		
r1536[0...1]	Torque-generating current maximum limit / Isq_max		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6640, 6710, 7960
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the maximum limit for the torque-generating current component. For index [0]: The signal limited by the Vdc controller is displayed here.		
Index:	[0] = Limited [1] = Unlimited		
r1537[0...1]	Torque-generating current minimum limit / Isq_min		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6640, 6710, 7960
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the minimum limit for the torque-generating current component. For index [0]: The signal limited by the Vdc controller is displayed here.		
Index:	[0] = Limited [1] = Unlimited		

r1538	CO: Upper effective torque limit / M_max upper eff		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6020, 6640
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the actual effective upper torque limit.		
Note:	The effective upper torque limit is reduced with respect to the selected upper torque limit p1520, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased. The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5. This torque limit can be influenced by p0543. The following applies for VECTOR: - this is possibly the case for a rotating measurement (see p1960). - additional variable torque limiting is possible (e.g. binector input p1540).		
r1539	CO: Lower effective torque limit / M_max lower eff		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6020, 6640
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the actual effective lower torque limit.		
Note:	The effective lower torque limit is reduced with respect to the selected lower torque limit p1521, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased. The following applies for VECTOR: - this is possibly the case for a rotating measurement (see p1960). - additional variable torque limiting is possible (e.g. binector input p1541). The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5. This torque limit can be influenced by p0543.		
p1540[0...n]	CI: Torque limit speed controller upper scaling / M_max n-ctr upScal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output.		
p1541[0...n]	CI: Torque limiting speed controller lower scaling / M_max nctr lowScal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6020, 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output.		

p1545[0...n]	BI: Activates travel to a fixed stop / TfS activation		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2520, 3617, 8012
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to activate/deactivate the "travel to fixed stop" function 1: Travel to fixed stop is active 0: Travel to fixed stop is inactive		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	EPOS uses the parameter (refer to p2686). When traveling to fixed stop, the fault F07900 "motor blocked" is suppressed.		
r1547[0...1]	CO: Torque limit for speed controller output / M_max outp n_ctrl		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Displays the torque limit to limit the speed controller output.		
Index:	[0] = Upper limit [1] = Lower limit		
r1548[0...1]	CO: Stall current limit torque-generating maximum / Isq_max stall		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the limit for the torque-generating current component using the stall calculation, the current limit of the Motor Module as well as the parameterization in p0640.		
Index:	[0] = Upper limit [1] = Lower limit		
p1551[0...n]	BI: Torque limit variable/fixed signal source / M_lim var/fixS_src		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 5620, 5630, 6060, 6630
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source to change over the torque limits between variable and fixed torque limit. BI: p1551 = 1 signal: The variable torque limit applies (fixed torque limit + scaling). BI: p1551 = 0 signal: The fixed torque limit applies.		

Example:

In order that for a Quick Stop (OFF3) the fixed torque limit is effective, binector input: p1551 must be interconnected to r0899.5.

p1552[0...n]	CI: Torque limit upper scaling without offset / M_max up w/o offs		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output without taking into account the current and power limits.

p1553[0...n]	Stall limit scaling / Stall limit scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	80.0 [%]	130.0 [%]	100.0 [%]

Description: Sets the scaling of the stall limit for the start of field weakening.

Danger: If the stall current limit is increased, then the q current setpoint can exceed the stall limit; as a consequence, a hysteresis effect can occur when loading and unloading.

p1554[0...n]	CI: Torque limit lower scaling without offset / M_max low w/o offs		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6060
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output without taking into account the current and power limits.

p1555[0...n]	CI: Power limit / P_max		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6640
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	-	-	1

Description: Sets the signal source for the motoring and negative regenerative power limit.

Dependency: Refer to: p1530, p1531

Note: The resulting motoring power limit is the minimum from p1530 and the signal which is read in.

The resulting regenerative power limit is the maximum from p1531 and the negative signal which is read in.

2 Parameters

2.2 List of parameters

p1556[0...n]	Power limit scaling / P_max scal		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6640
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	340.28235E36	0.00
Description:	Sets the scaling of the signal source for the motoring and negative regenerative power limit. A value of 0 means no power limiting.		
p1560[0...n]	Moment of inertia estimator accelerating torque threshold value / J_est M thresh		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [%]	100.00 [%]	10.00 [%]
Description:	Sets the threshold for the accelerating torque for the moment of inertia estimator. The moment of inertia estimator is active above this threshold. The value is referred to the rated motor torque (r0333).		
Dependency:	Refer to: p1400, p1561, p1562		
Note:	The moment of inertia estimation is inaccurate at very low accelerating torques. As a consequence, below this threshold, the estimator does not provide any new values.		
p1561[0...n]	Moment of inertia estimator change time moment of inertia / J_est t_change J		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.00 [ms]	5000.00 [ms]	500.00 [ms]
Description:	Sets the change time for the moment of inertia for the moment of inertia estimator. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1562		
p1562[0...n]	Moment of inertia estimator change time load / J_est t load		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	5.00 [ms]	5000.00 [ms]	10.00 [ms]
Description:	Sets the change time for the load torque for the moment of inertia estimator. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1561		

p1563[0...n]	CO: Mom. of inertia estimator load torque direction of rotation pos. / J_est M pos		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [Nm]	340.28235E36 [Nm]	0.00 [Nm]
Description:	Display and connector output for the monitored load torque in the positive direction of rotation. The moment of inertia estimator estimates the load torque drawn while the speed is constant.		
Dependency:	Refer to: p1400, p1560, p1561		
p1564[0...n]	CO: Mom. of inertia estimator load torque direction of rotation neg. / J_est M neg		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [Nm]	340.28235E36 [Nm]	0.00 [Nm]
Description:	Display and connector output for the monitored load torque in the negative direction of rotation. The moment of inertia estimator estimates the load torque drawn while the speed is constant.		
Dependency:	Refer to: p1400, p1560, p1561		
p1565	Moment of inertia estimator reset moment of inertia / J_est reset J		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1	1	0
Description:	Reset the moment of inertia estimator for the currently selected drive data set (DDS).		
Value:	-1: Reset moment of inertia and load 0: No action 1: Reset moment of inertia		
Dependency:	Refer to: p1400, p1560, p1561		
Note:	After activating the reset, the parameter is automatically reset to zero.		
r1566[0...n]	Flux reduction torque factor transition value / Flux red M trans		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6790
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	The following applies for a synchronous reluctance motor: Displays the transition value for the start of the evaluation of the optimum flux characteristic. The value is referred to the rated motor torque.		
Note:	The transition value corresponds with the lower limit of the flux setpoint (p1581). For a lower absolute torque setpoint, the flux setpoint remains at the lower limit (p1581).		

p1567[0...n]	Magnetization rate time scaling / Mag Tv scale		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6790
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	1000 [%]	100 [%]
Description:	The following applies for a synchronous reluctance motor: Sets the scaling of the rate time Tv for dynamic flux increase when the torque is quickly established. The value is referred to the inverse value of the rated motor frequency. Tv = p1567 / 100 % / p0310		
Dependency:	Refer to: p1401		
Note:	The "Dynamic load-dependent flux boost" function can be deactivated using p1401.9 = 0.		
r1568[0...5]	CO: Synchronous reluctance motor flux channel / RESM flux channel		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for signals of the flux channel for a synchronous reluctance motor (RESM). The values are referred to the rated motor flux of the direct axis (p0357 * r0331).		
Index:	[0] = Setpoint before filter [1] = Optimum flux characteristic output [2] = Minimum value at low speed [3] = Dynamic load-dependent boost [4] = Field weakening value total [5] = Field weakening value precontrol		
Note:	RESM: reluctance synchronous motor (synchronous reluctance motor)		
p1569[0...n]	CI: Supplementary torque 3 / M_suppl 3		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	-	-	3841[0]
Description:	Sets the signal source for supplementary torque 3.		
Dependency:	Refer to: p3842		
Notice:	The signal input is after the torque limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.		
Note:	The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the speed controller output reaches its torque limits, but the current limits have still not been reached (this only applies to vector drives).		

p1570[0...n]	CO: Flux setpoint / Flex setp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	50.0 [%]	200.0 [%]	100.0 [%]
Description:	Sets the flux setpoint referred to rated motor flux. The following applies for a synchronous reluctance motor: Scaling the flux setpoint.		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	For p1570 > 100%, the flux setpoint increases as a function of the load from 100% (no-load operation) to the setting in p1570 (above rated motor torque), if p1580 > 0% has been set. The following applies for a synchronous reluctance motor: The scaling allows the flux setpoint to be adapted when operating with load-dependent optimum flux characteristic or with constant flux setpoint.		
p1571[0...n]	CI: Supplementary flux setpoint / Suppl flux setp		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6725
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the supplementary flux setpoint.		
Notice:	Low flux setpoints can cause the drive to stall at higher loads. This is the reason that the flux setpoint should only be adapted for slow load changes.		
Note:	The supplementary flux setpoint is limited to +/- 50 %.		
p1572[0...n]	Supplementary flux setpoint / Suppl flux setp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	0.0 [%]
Description:	Separately-excited synchronous motor: Sets the supplementary flux setpoint for the flux controller. The value is referred to the rated motor flux. Synchronous-reluctance motor: Sets the factor by which the flux is reduced when operating under no-load conditions and operating using the pulse technique.		
Notice:	Separately-excited synchronous motor: The parameter should be set back to 0% again for normal closed-loop control operation.		
Note:	Separately-excited synchronous motor: The parameter is used to optimize the flux controller. The current model is not influenced by the setting.		

2 Parameters

2.2 List of parameters

p1573[0...n]	Flux threshold value magnetizing / Flux thresh magnet		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	200.0 [%]	100.0 [%]
Description:	Sets the flux threshold value for enabling the speed setpoint and the end of magnetizing (r0056.4).		
Note:	The parameter only has an influence if the flux actual value reaches the threshold value p1573 more quickly during magnetizing than the time set in p0346. This is generally the case when selecting fast magnetization (p1401.6). The parameter has no influence for flying restart (see p1200) and after DC braking (see p1231).		
p1574[0...n]	Voltage reserve dynamic / U_reserve dyn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6723, 6724
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	150.0 [Vrms]	10.0 [Vrms]
Description:	Sets a dynamic voltage reserve.		
Note:	In the field weakening range, it must be expected that the control dynamic performance is somewhat restricted due to the limited possibilities of controlling/adjusting the voltage. This can be improved by increasing the voltage reserve. Increasing the reserve reduces the steady-state maximum output voltage (r0071).		
p1575[0...n]	Voltage target value limit / U_tgt val lim		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6725
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.00 [%]	300.00 [%]	200.00 [%]
Description:	Sets the limit of the voltage target value. In steady-state field weakening operation this corresponds to the required output voltage. The value of 100% refers to p0304.		
Note:	The output voltage is only limited if the maximum output voltage (r0071) minus the voltage reserve (p1574) corresponds to a value higher than p1575. Limiting via p1575 allows the influence of the voltage ripple of the line supply voltage to be eliminated at the operating point.		
p1576[0...n]	Flux boost adaptation speed, lower / Flux boost n lower		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6725
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the lower adaptation speed of the flux boost. Below this speed, p1570 is set as reference (setpoint) flux.		

p1577[0...n]	Flux boost adaptation speed upper / Flux boost n upper		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6725
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [%]	10000.0 [%]	200.0 [%]
Description:	Sets the upper adaptation speed of the flux boost. Above this speed, the rated motor flux (100 %) is set as reference (setpoint) flux.		
Dependency:	The parameter value refers to the lower adaptation speed of the flux boost. Refer to: p1576		
p1578[0...n]	Flux reduction flux decrease smoothing time / Flux red dec t_sm		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6791
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	20 [ms]	5000 [ms]	200 [ms]
Description:	Sets the smoothing time for the flux setpoint when decreasing the flux due to flux reduction (p1581 < 100 %).		
Dependency:	Refer to: p1579		
p1579[0...n]	Flux reduction flux build-up smoothing time / Flux red up t_sm		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6791
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	5000 [ms]	4 [ms]
Description:	Sets the smoothing time for the flux setpoint for the flux build-up due to flux reduction (p1581 < 100 %).		
Dependency:	Refer to: p1578		
Note:	An excessively long smoothing time extends the time until the maximum torque is reached from the no-load phase.		
p1580[0...n]	Efficiency optimization / Efficiency opt.		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	100 [%]	0 [%]
Description:	Sets the efficiency optimization. When optimizing the efficiency, the flux setpoint of the closed-loop control is adapted as a function of the load. For p1580 = 100 %, under no-load operating conditions, the flux setpoint is reduced to 50 % of the rated motor flux.		
Note:	It only makes sense to activate this function if the dynamic response requirements of the speed controller are low. In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase Tn, reduce Kp). Further, the smoothing time of the flux setpoint filter (p1582) should be increased.		

2 Parameters

2.2 List of parameters

p1581[0...n]	Flux reduction factor / Flux red factor		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [%]	100 [%]	100 [%]
Description:	Sets the factor to which the flux is reduced under no-load conditions. For a value of 100%, the flux reduction is deactivated. This parameter refers to the flux saved in the field weakening characteristic. By reducing the flux, the losses in induction motors can be reduced under no-load conditions or at low torques. However, the time it takes to reach the maximum torque is extended.		
Recommendation:	For induction motors with closed rotor slots, we recommend that the integral time of the current controller (p1717) is increased to three times the value, for example. For stable operation, the maximum field-weakening factor in operation with an encoder must be less than 16 and in operation without an encoder must be less than 4. Lower field weakening factors are recommended. The field weakening factor is calculated as follows: $(p1082 * 100 \% * 600 \text{ V}) / (p0348 * p1581 * p0070)$ In order to reduce losses due to magnetizing and de-magnetizing, we recommend that the smoothing times are adapted for flux decrease (p1578) and flux build-up (p1579). In order to reduce the losses as a result of building-up and reducing the torque, we recommend that the torque setpoint is smoothed (current setpoint filter (p1656 ...) or speed actual value filter (p1441)).		
Note:	It only makes sense to activate this function if there are low dynamic requirements placed on the speed controller and there are frequent phases with a low load. In order to avoid oscillations, if required, the speed controller parameters should be adapted (decrease Kp (p1460, p1470), increase Tn (p1462, p1472)). When used without an encoder, flux reduction is not possible for induction motors with closed rotor slots.		
p1582[0...n]	Flux setpoint smoothing time / Flux setp T_smth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722, 6724, 6725
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4 [ms]	5000 [ms]	15 [ms]
Description:	Sets the smoothing time for the flux setpoint.		
r1583	Flux setpoint smoothed / Flux setp smooth		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6722, 6723, 6724
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the smoothed flux setpoint. The value is referred to the rated motor flux.		

p1584[0...n]	Field weakening operation flux setpoint smoothing time / Field weak T_smth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	20000 [ms]	0 [ms]
Description:	Sets the smoothing time for the flux setpoint in the field-weakening range		
Recommendation:	Smoothing should be especially used if there is no regenerative feedback into the line supply. This means that the DC link voltage can quickly increase in regenerative operation		
Note:	Only the flux setpoint rise is smoothed		
p1585[0...n]	Flux actual value smoothing time / Flux actVal T_smth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the smoothing time for the flux actual value.		
p1586[0...n]	Field weakening characteristic scaling / Field weak scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	80.0 [%]	120.0 [%]	100.0 [%]
Description:	Sets the scaling of the precontrol characteristic for the start of field weakening. For values above 100 % and for partial load situations, the field weakening starts at higher speeds.		
Note:	If the start of field weakening is shifted to lower speeds, then the voltage reserve is increased for partial load situations. If the start of field weakening is shifted to higher speeds, the voltage reserve is appropriately reduced so that for fast load changes, it can be expected that this will have a negative impact on the dynamic performance.		
r1589	Field-weakening current precontrol value / I_FieldWeak prectr		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6724
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, SESM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the precontrol value for the field weakening current.

	Not for motor type: PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	30 [ms]
Description:	Sets the integral time for the flux controller.		
Note:	The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		
r1593[0...1]	CO: Field weakening controller / flux controller output / Field/FI_ctrl outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6723, 6724, 6726
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Display and connector output for the output of the field weakening controller (synchronous motor) or the output of the flux controller (separately excited synchronous motor, induction motor).		
Index:	[0] = PI output [1] = I output		
p1594[0...n]	Field-weakening controller P gain / Field_ctrl Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6724
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	1000.00	0.00
Description:	Sets the P gain of the field-weakening controller.		

p1595[0...n]	Field weakening controller additional setpoint / Field_ctr add_setp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6726
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-80.00 [%]	50.00 [%]	0.00 [%]
Description:	Sets an additional setpoint for the field weakening controller. The value refers to the dynamic voltage reserve (p1574).		
Note:	For a value equal to zero, the field weakening controller is activated when the maximum voltage, calculated with the average value of the DC link voltage - and limited using p1575 - is reached. Positive values mean that the field weakening controller intervenes later. Negative values cause the field weakening controller to intervene earlier, so that the voltage can move away from the modulation depth limit.		
p1596[0...n]	Field weakening controller integral-action time / Field_ctrl Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6723, 6724

	Not for motor type: REL	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the effective flux setpoint. The value is referred to the rated motor flux.		

2 Parameters

2.2 List of parameters

p1599[0...n]	Flux controller excitation current difference / Flux ctr I_exc_dif		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	3.0 [%]
Description:	Sets the permissible difference between the actual excitation current and the excitation current setpoint. The excitation current flux controller is active within this difference. If the difference lies outside the specified limit value, then the I component of the excitation current flux controller is kept. Instead of this, for the flux controller of the field-generating current, an additional I controller is switched in (integral time according to p1592). If the difference again lies within the bandwidth, the I component of the excitation current flux controller is re-activated and the I component of the flux controller of the field-generating current is reduced as an exponential function with respect to time. The reduction of the I component over time depends on the rotor time constant (r0384).		
p1600[0...n]	P flux controller P gain / P flux ctrl Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0	999999.0	10.0
Description:	Sets the proportional gain of the P flux controller for separately excited synchronous motors (SESM).		
Note:	The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned. When calculating controller parameters (p0340 = 4), this value is re-calculated.		
p1601[0...n]	Current injection ramp time / I_inject t_ramp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6790
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [ms]	10000 [ms]	20 [ms]
Description:	Synchronous-reluctance motor: Sets the ramp-up time of the current setpoint (p1610, p1611) when switching over from closed-loop controlled to open-loop controlled operation. Synchronous motor: Sets the ramp-down time of the current setpoint when switching over from open-loop controlled to closed-loop controlled operation.		
r1602	CO: P flux controller output / P flux ctrl outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6726, 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the output of the P flux controller for separately excited synchronous motors (SESM).		

p1604[0...n]	Pulse technique current limit / Pulse current lim		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the effective current limit within the pulse technique.		
Note:	The saturation characteristic of the motor defines the available operating range for the pulse technique. This operating range can be adjusted using the current limit. When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used. Otherwise, the rated motor current is used as pre-assigned value.		
p1605[0...n]	Pulse technique pattern configuration / Puls patrn config		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	5	2
Description:	Sets the applied test signal and evaluation technique for estimating the continuous rotor position. Remark: See p1750 to activate the test signal technique.		
Value:	1: 2p_dpm 2: 4p_dppmm 3: 2p_dpm_model 4: 2p_dpm_qpm 5: 2p_apm_bpm		
Dependency:	Refer to: p1750		
Note:	When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.		
r1606	CO: Pulse technique pattern actual / Puls pattern act		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	5	-
Description:	Display and connector output of the currently applied test signal for estimating the continuous rotor position.		
Value:	0: None 1: 2p_dpm 2: 4p_dppmm 3: 2p_dpm_model 4: 2p_dpm_qpm 5: 2p_apm_bpm		
Dependency:	Refer to: p1605, p1750		

p1607[0...n]	Pulse technique excitation / Pulse excitation		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [mVs]	20000.000 [mVs]	32.000 [mVs]
Description:	Sets the excitation amplitude (voltage-time pulse) for the pulse technique for estimating the continuous rotor position. For load current-dependent adaptation (p3371 ... p3373), this amplitude applies at operating point 1.		
Dependency:	Refer to: p1605, p1750, p3371, p3372, p3373		

r1608[0...8]	CO: Pulse technique response / Puls response		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: 6_5	Unit selection: p0505
	Not for motor type: ASM, SESM, REL	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Display and connector output for the components of the signal response to the excitation of the pulse technique.		
Index:	[0] = Total x [1] = Total y [2] = Total abs [3] = Total x smooth [4] = Total y smooth [5] = Reflex x [6] = Reflex y [7] = Reflex abs [8] = Offset abs		
Dependency:	Refer to: p1605, p1607, p1750		
Note:	For index [0...8]: The reference system of components x and y depends on the actual pattern (r1606). For fixed stator excitation, the following applies: x = alpha, y = beta For fixed rotor excitation, the following applies: x = d, y = q For index [3, 4]: Displays the smoothed values from indices 0 and 1 (smoothing time p0045).		

p1609[0...n]	I/f operation current setpoint / I/f op I_setp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the stator current setpoint for operation of a separately excited synchronous motor (SESM) in operating mode I/f (p1300 = 18).		

p1610[0...n] Torque setpoint static (sensorless) / M_set static			
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32	Calculated: - Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 6700, 6721, 6722, 6726
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min -200.0 [%]	Max 200.0 [%]	Factory setting 50.0 [%]
Description:	Sets the static torque setpoint for sensorless vector control in the low speed range. This parameter is entered as a percentage referred to the rated motor torque (r0333). For sensorless vector control, in the speed-controlled operating range (open loop), an absolute current is impressed. p1610 represents the maximum load that occurs at a constant setpoint speed.		
Caution:	For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed (see function diagram, 6726).		
			
Notice:	p1610 should always be set to at least 10 % higher than the maximum steady-state load that can occur.		
Note:	For p1610 = 0%, a current setpoint is calculated that corresponds to the no-load case (ASM: rated magnetizing current, RESM: no-load magnetizing current). For p1610 = 100 %, a current setpoint is calculated that corresponds to the rated motor torque. Negative values are converted into positive setpoints in the case of induction and permanent-magnet synchronous motors as well as closed-loop controlled reluctance motors.		
p1611[0...n] Additional acceleration torque (sensorless) / M_suppl_accel			
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180	Access level: 2 Func. diagram: 6700, 6721, 6722, 6726
	P-Group: Closed-loop control Not for motor type: REL	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0.0 [%]	Max 200.0 [%]	Factory setting 30.0 [%]
Description:	Setting the dynamic torque setpoint for small speed ranges with sensorless vector control. This parameter is entered as a percentage referred to the rated motor torque (r0333).		
Caution:	For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed during the acceleration phase (r1199.2 = 1, see function diagram, 6726).		
			
Note:	When accelerating and braking p1611 is added to p1610 and the resulting total torque is converted into an appropriate current setpoint and controlled. For pure accelerating torques, it is always favorable to use the torque precontrol of the speed controller (p1496).		
p1612[0...n] Current setpoint magnetizing open-loop controlled / Id_set ctrl			
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32	Calculated: CALC_MOD_ALL Dyn. index: DDS, p0180	Access level: 2 Func. diagram: -
	P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM	Unit group: 6_2 Scaling: -	Unit selection: p0505 Expert list: 1
	Min 0.00 [Arms]	Max 10000.00 [Arms]	Factory setting 0.00 [Arms]
Description:	Sets the magnetizing current setpoint in the open-loop controlled encoderless operation. The value is only valid during the current model orientation.		
Dependency:	Refer to: p1610, p1611		
Note:	The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.		

r1614	EMF maximum / EMF max		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6725
	P-Group: Displays, signals	Unit group: 5_1	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual maximum possible electromotive force (EMF) of the separately excited synchronous motor.		
Dependency:	The value is the basis for the flux setpoint. The maximum possible EMF depends on the following factors: - Actual DC link voltage (r0070). - Maximum modulation depth (p1803). - Field-generating and torque-generating current setpoint.		
p1616[0...n]	Current setpoint smoothing time / I_set T_smooth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6721, 6722, 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4 [ms]	10000 [ms]	40 [ms]
Description:	Sets the smoothing time for the current/torque setpoint in the open-loop-controlled operating range in the case of sensorless vector control.		
Note:	This parameter is only effective in the range where current is injected for sensorless vector control. For permanent magnet synchronous motors, the parameter is effective over the complete speed range. For induction motors, the current setpoint is calculated from p1610 and p1611 and for separately excited synchronous motors the torque setpoint is calculated from p1610 and p1611.		
r1617	CO: Torque setpoint (controlled) / M_set ctrl		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Torque setpoint for sensorless control of the separately excited synchronous motor in the open-loop-controlled operating range (under p1755 + p1756).		
r1618	Current model controller precontrol / I_mod_ctrl prectrl		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the precontrol value of the current model controller. It involves a magnetizing current in the d-direction.		

p1619[0...n]	Setpoint/actual value tracking threshold / SetAct track thrsh		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Threshold for setpoint/actual value tracking of the stator current in the q axis of the current model.		
p1620[0...n]	Stator current minimum / I_stator min		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10000.00 [Arms]	10000.00 [Arms]	0.00 [Arms]
Description:	Sets the minimum stator current for separately excited synchronous motors (SESM). A negative value means that the field-generating stator current (d-axis) has a negative sign. The valid value is internally limited to 50% of the rated motor current (p0305).		
p1621[0...n]	Changeover speed inner cos phi = 1 / n_chngov cos phi=1		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]
Description:	Sets the speed where a change is made from the inner to the outer cos phi = 1. If the value that is entered exceeds the rated speed, then a change is made to the inner cos phi = 1 over the complete speed range.		
p1622[0...n]	Field-generating current setpoint smoothing time constant / Id_setp T_smth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [ms]	200.0 [ms]	20.0 [ms]
Description:	Sets the smoothing time constant for the setpoint of the field-generating current components. The current filtered in this way is included in the calculation of the cos phi.		

2 Parameters

2.2 List of parameters

r1623[0...1]	Field-generating current setpoint (steady-state) / Id_set stationary		
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: PMSM, REL, RESM Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 4 Func. diagram: 6723, 6726, 6727 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the steady-state field generating current setpoint (Id_set).		
r1624	Field-generating current setpoint total / Id_setp total		
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: REL Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 4 Func. diagram: 6640, 6721, 6723, 6727 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the limited field-generating current setpoint (Id_set). This value comprises the steady-state field-generating current setpoint r1623 and a dynamic component that is only set when changes are made to the flux setpoint.		
p1625[0...n]	Excitation current setpoint calibration / I_exc_setp cal		
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min 10.0 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 200.0 [%]	Access level: 3 Func. diagram: 6727 Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the gain factor to weight the excitation current setpoint.		
r1626[0...1]	CO: Excitation current setpoint / I_exc_setp		
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: 6727 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the calculated excitation current setpoint. The following applies for index 0: For direct excitation, the value is referred to p0390. For brushless excitation, the value is referred to p0690. The following applies for index 1: The value is referred to p0390.		
Index:	[0] = Excitation current of the excitation equipment [1] = Excitation current for direct excitation		
Dependency:	Refer to: p0390, p0690		

r1627	CO: Current model load angle / I_mod load angle		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the load angle of the current model.		
p1628[0...n]	Current model controller dynamic factor / I_mod_ctr dyn_fact		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	400 [%]	50 [%]
Description:	Sets the dynamic response factor for the current model controller.		
p1629[0...n]	Current model controller P gain / I_mod_ctrl Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100000.000	0.000
Description:	Sets the proportional gain for the current model controller. This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.		
p1630[0...n]	Current model controller integral time / I_mod_ctrl Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	0.00 [ms]
Description:	Sets the integral time for the current model controller. This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.		
r1631	Current model controller P gain effective / I_mod ctrl Kp eff		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the effective P gain of the current model controller.		

r1632	Current model controller integral time effective / I_mod_ctrl Tn eff		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the effective integral time of the current model controller.		
r1633	Current model flux setpoint / I_mod flux setp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the effective flux setpoint of the current model. The value is referred to the rated motor flux.		
r1634	Current model flux actual value / I_mod flux act val		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the effective flux actual value of the current model. The value is referred to the rated motor flux.		
r1635	Current model controller I component / I_mod_ctrl I comp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the I component of the current model controller.		
r1636	Current model controller output / I_mod_ctrl outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the output of the current model controller.		

r1637	Current model magnetizing current d axis / I_mod I_mag d-ax		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the magnetizing current of the current model in the d-axis.		

r1638	Current model magnetizing current q axis / I_mod I_mag q-ax		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the magnetizing current of the current model in the q-axis.		

r1639	CO: Current model Isq after actual value tracking / I_mod Isq track		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the stator current in the q axis after the current actual value tracking.		

p1640[0...n]	CI: Excitation current actual value signal source / I_exc_ActVal S_src		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the excitation current actual value		

r1641[0...1]	Excitation current actual value / I_exc_act val		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727, 8020
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the excitation current actual value that is read in.		
Index:	[0] = Excitation current of the excitation equipment [1] = Excitation current for direct excitation		
Dependency:	Refer to: p0390		

2 Parameters

2.2 List of parameters

Note: The following applies for index 0:
For direct excitation, the value is referred to p0390. For brushless excitation, the value is referred to p0690.
The following applies for index 1:
The value is referred to p0390.

p1642[0...n]	Minimum excitation current / Min I_exc		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	50.0 [%]	5.0 [%]
Description:	Sets the minimum excitation current. This means that negative excitation currents can be avoided.		

p1643[0...n]	Minimum excitation current closed-loop control gain factor / I_exc_min Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	5.00	0.40
Description:	Sets the gain factor for the minimum excitation current, closed-loop control. This is active if the excitation current is below 75 % of p1642.		
Dependency:	Refer to: p1642		

r1644	CO: Excitation current monitoring output / I_exc_monit outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6727
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the output of the excitation current monitoring for separately excited synchronous motors.		

p1645[0...7]	BI: Excitation feedback signals signal source / Exc FS S_src		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 6495
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	[0..6] 1 [7] 0
Description:	Sets the signal source for the individual feedback signals from the excitation.		
Index:	[0] = Excitation ready for switching on [1] = Excitation ready [2] = Excitation operational [3] = Excitation group signal fault [4] = Excitation group signal alarm [5] = Not used		

[6] = Not used
 [7] = Excitation at the voltage limit
 Refer to: r1649

Dependency:

p1646		Excitation monitoring time / Excit t_monit		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6495	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	2.0 [s]	1300.0 [s]	20.0 [s]	
Description:	Sets the monitoring time of the excitation. After an ON command, the feedback signal must be received within this monitoring time.			
Note:	After the on command for the excitation (r1648.0 = 1), its feedback signal must be available at r1649.1 within this monitoring time (BI: p1645[1]). The same monitoring time is effective after the excitation is enabled for operation (r1648.3 = 1) up to the feedback signal "excitation operational" (r1649.2 = 1, BI: p1645[2]).			

p1647		Excitation switch-off delay time / Exc t_off		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6495	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [s]	5.0 [s]	0.8 [s]	
Description:	Sets the switch-off delay time to shut down the excitation equipment.			
Note:	The delay time starts if, when switching off, r0863.0 = 0. r1648.0 and r1648.3 are reset at the end of the delay time.			

r1648.0...11		CO/BO: Excitation control word / Excitation STW			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 6495		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the control word for the excitation equipment.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Power up excitation	Yes	No	-
	01	Excitation no OFF2	Yes	No	-
	02	Excitation no OFF3	Yes	No	-
	03	Excitation operation enable	Yes	No	-
	07	Excitation acknowledge fault	Yes	No	-
	10	Reserved	-	-	-
	11	Reverse field excitation invert excitation current setpoint	Yes	No	-
Note:	For bit 00: This bit is set dependent on r0863.0.				

r1649.0...11	CO/BO: Excitation status word / Excitation ZSW			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 6495	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Display and BICO output for the status word of the excitation equipment.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Excitation ready for switching on feedback signal	Yes	No
	01	Excitation ready feedback signal	Yes	No
	02	Excitation operational feedback signal	Yes	No
	03	Excitation group signal fault	Yes	No
	07	Excitation group signal alarm	Yes	No
	08	Excitation at the voltage limit	Yes	No
	11	Excitation voltage present at the power unit	Yes	No
Dependency:	Refer to: p1645 Refer to: A49204			
r1650	Current setpoint torque-generating before filter / Iq_set before filt			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5710	
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505	
	Not for motor type: REL	Scaling: p2002	Expert list: 1	
	Min	Max	Factory setting	
	- [Arms]	- [Arms]	- [Arms]	
Description:	Displays the torque generating current setpoint Iqset after the torque limits and the clock cycle interpolation is ahead of the current setpoint filters.			
r1651	CO: Torque setpoint function generator / M_set FG			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: 7_1	Unit selection: p0505	
	Not for motor type: REL	Scaling: p2003	Expert list: 1	
	Min	Max	Factory setting	
	- [Nm]	- [Nm]	- [Nm]	
Description:	Displays the torque setpoint of the function generator.			
p1653[0...n]	Current setpoint torque-generating smoothing time minimum / Isq_s T_smth min			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6710	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.1 [ms]	20.0 [ms]	0.1 [ms]	
Description:	Sets the minimum smoothing time constant for the setpoint of the torque-generating current components.			

p1654[0...n]	Curr. setpoint torque-gen. smoothing time field weakening range / Isq_s T_smth FW			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6710	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: PMSM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.1 [ms]	50.0 [ms]	4.8 [ms]	
Description:	Sets the smoothing time constant for the setpoint of the torque-generating current components.			
Note:	The smoothing time does not become effective until the field-weakening range is reached.			
p1655[0...4]	CI: Current setpoint/Speed actual value filter nat. frequency tuning / I/n_setp_filt f_n			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 6700, 6710	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: PERCENT	Expert list: 1	
	Min	Max	Factory setting	
	-	-	1	
Description:	Sets the signal source for tuning the natural frequency of the current setpoint filter 1, 2 and speed actual value filter 5.			
Index:	[0] = Filter 1 [1] = Filter 2 [2] = Reserved [3] = Reserved [4] = Filter 5			
p1656[0...n]	Current setpoint/Speed actual value filter activation / I_setp_filt act			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 4715, 6710	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 0001 bin	
Description:	Setting for activating/deactivating the current setpoint filter 1, 2 and speed actual value filter 5.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Filter 1	Active	Inactive
	01	Filter 2	Active	Inactive
	04	Filter 5	Active	Inactive
				FP
				-
				-
				-
Dependency:	The individual current setpoint/speed actual value filters are parameterized starting at p1657.			
Note:	If not all of the filters are required, then the filters should be used consecutively starting from filter 1.			
p1657[0...n]	Current setpoint filter 1 type / I_set_filt 1 type			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3	
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	1	2	1	
Description:	Sets the current setpoint filter 1 as low pass (PT2) or general 2nd-order filter.			
Value:	1: PT2 low pass 2: General 2nd order filter			
Dependency:	The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.			
Note:	For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.			

2 Parameters

2.2 List of parameters

The denominator damping can be determined from the equation for the 3 dB bandwidth:

$$f_{3dB} \text{ bandwidth} = 2 * D_{\text{denominator}} * f_{\text{bandstop frequency}}$$

p1658[0...n]	Current setpoint filter 1 denominator natural frequency / I_set_filt1 fn_den		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description:

Sets the denominator natural frequency for current setpoint filter 1 (PT2, general filter).

Dependency:

The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1659[0...n]	Current setpoint filter 1 denominator damping / I_set_filt 1 D_den		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700

Description:

Sets the denominator damping for current setpoint filter 1.

Dependency:

The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1660[0...n]	Current setpoint filter 1 numerator natural frequency / I_set_filt1 fn_num		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description:

Sets the numerator natural frequency for current setpoint filter 1 (general filter).

Dependency:

The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1661[0...n]	Current setpoint filter 1 numerator damping / I_set_filt 1 D_num		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700

Description:

Sets the numerator damping for current setpoint filter 1.

Dependency:

The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1662[0...n]	Current setpoint filter 2 type / I_set_filt 2 type		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	2	1

Description:

Sets current setpoint filter 2 as lowpass filter (PT2) or general 2nd order filter.

Value:

- 1: PT2 low pass
- 2: General 2nd order filter

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:
 $f_{3dB} \text{ bandwidth} = 2 * D_{denominator} * f_{bandstop} \text{ frequency}$

p1663[0...n]	Current setpoint filter 2 denominator natural frequency / I_set_filt2 fn_den		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the denominator natural frequency for current setpoint filter 2 (PT2, general filter).

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

p1664[0...n]	Current setpoint filter 2 denominator damping / I_set_filt 2 D_den		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700

Description: Sets the denominator damping for current setpoint filter 2.

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

p1665[0...n]	Current setpoint filter 2 numerator natural frequency / I_set_filt2 fn_num		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the numerator natural frequency for current setpoint filter 2 (general filter).

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

p1666[0...n]	Current setpoint filter 2 numerator damping / I_set_filt 2 D_num		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5710, 6710
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700

Description: Sets the numerator damping for current setpoint filter 2.

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

2 Parameters

2.2 List of parameters

p1677[0...n]	Speed actual value filter 5 type / n_act_filt 5 type		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	2	2
Description:	Sets the speed actual value filter 5 as low pass (PT2) or general 2nd-order filter.		
Value:	1: PT2 low pass 2: General 2nd order filter		
Dependency:	The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.		
Note:	For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed. The denominator damping can be determined from the equation for the 3 dB bandwidth: $f_{3dB \text{ bandwidth}} = 2 * D_{\text{denominator}} * f_{\text{bandstop frequency}}$		
p1678[0...n]	Speed actual value filter 5 denominator natural frequency / n_act_filt5 fn_den		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]
Description:	Sets the denominator natural frequency for speed actual value filter 5 (PT2, general filter).		
Dependency:	The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.		
p1679[0...n]	Speed actual value filter 5 denominator damping / n_act_filt 5 D_den		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.001	10.000	0.700
Description:	Sets the denominator damping for speed actual value filter 5.		
Dependency:	The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.		
p1680[0...n]	Speed actual value filter 5 numerator natural frequency / n_act_filt5 fn_num		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]
Description:	Sets the numerator natural frequency for speed actual value filter 5 (general filter).		
Dependency:	The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.		

p1681[0...n]	Speed actual value filter 5 numerator damping / n_act_filt 5 D_num		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 4715
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.700
Description:	Sets the numerator damping for speed actual value filter 5.		
Dependency:	The speed actual value filter is activated via p1656.4 and parameterized via p1677 ... p1681.		
p1699	Filter data acceptance / Filt data accept		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Activates data acceptance for parameter changes for the filter. p1699 = 0: The new filter data are immediately accepted. p1699 = 1: The new filter data are only accepted when this parameter is reset.		
Dependency:	Speed setpoint filter 1, 2 (p1414 and following) Speed actual value filter (p1413, p1446 and following) Current setpoint filter 1 ... 4 (p1656 and following) Current setpoint filter 5 ... 10 (function module, p5200 and following) APC filter (APC function module, p3704 and following) Refer to: p1656		
p1702[0...n]	Isd current controller precontrol scaling / Isd_ctr_prectrScal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	70.0 [%]
Description:	Sets the scaling of the dynamic current controller precontrol for the flux-generating current component Isd.		
Note:	The parameter is effective for permanent and separately excited synchronous motors.		
p1703[0...n]	Isq current controller precontrol scaling / Isq_ctr_prectrScal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	70.0 [%]
Description:	Sets the scaling of the dynamic current controller precontrol for the torque/force-generating current component Isq.		

p1704[0...n]	Isq current controller precontrol EMF scaling / Isq_ctrl EMF scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714, 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	100.0 [%]
Description:	Sets the scaling of the EMF precontrol for the Isq current controller.		
p1705[0...n]	Flux setpoint/actual value tracking threshold / Flux track thresh		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714, 6726
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	100.0 [%]	100.0 [%]
Description:	Threshold for the setpoint - actual value tracking of the EMF precontrol of the Isq current controller.		
p1710[0...n]	Current controller adaptation direct axis starting point Kp / Id_adapt pt Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1720 is effective.		
Dependency:	Refer to: p1720		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.		
p1711[0...n]	Current ctrl adaptation direct axis starting point Kp adapted / Id_adap pt Kp adap		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]
Description:	Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1720 x p1712 is effective.		
Dependency:	Refer to: p1710, p1712, p1720		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.		

p1712[0...n]	Current controller adaptation direct axis p gain adaptation / Id_adapt Kp adapt		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the factor for the current controller P gain in the adaptation range (d-current > p1711). The value is referred to p1720.		
Dependency:	Refer to: p1710, p1711, p1720		
Notice:	When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.		
Note:	For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.		
p1715[0...n]	Current controller P gain / I_ctrl Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6700, 6714, 7017
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100000.000	0.000
Description:	Sets the proportional gain of the current controller for the lower adaptation current range. This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.		
Dependency:	Refer to: p0391, p0392, p0393		
Note:	For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.		
p1717[0...n]	Current controller integral-action time / I_ctrl Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 5714, 6700, 6714, 7017
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	2.00 [ms]
Description:	Sets the integral-action time of the current controller.		
Dependency:	Refer to: p1715		
r1718	CO: Isq controller output / Isq_ctrl outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual output of the Isq current controller (torque/force generating current, PI controller). The value contains the proportional and integral components of the PI controller.		

2 Parameters

2.2 List of parameters

r1719	Isq controller integral component / Isq_ctrl I_comp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the integral component of the Isq current controller (torque/force-generating current, PI controller).		
p1720[0...n]	Current controller d axis p gain / Id_ctrl Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	100000.000	0.000
Description:	Sets the proportional gain of the d-current controller for the lower adaptation current range. This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.		
p1722[0...n]	Current controller d axis integral time / I_ctrl d-axis Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	1000.00 [ms]	2.00 [ms]
Description:	Sets the integral time of the d-current controller.		
r1723	CO: Isd controller output / Isd_ctrl outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual output of the Isd current controller (flux-generating current, PI controller). The value contains the proportional and integral components of the PI controller.		
r1724	Isd controller integral component / Isd_ctrl I_comp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the integral component of the Isd current controller (flux-generating current, PI controller).		

r1725	Isd controller integral component limit / Isd_ctrl I_limit		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the limit value for the integral component of the Isd current controller.		
p1726[0...n]	Quadrature arm decoupling scaling / Transv_decpl scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	75.0 [%]
Description:	Sets the scaling of the quadrature arm decoupling		
Note:	This parameter is ineffective for sensorless vector control. In this case, p1727 is always used. If p1726 is set to 0, then the quadrature de-coupling is deactivated. The integral component of the Isd current controller remains effective in the complete speed control range. For the closed-loop control of synchronous motors, this parameter is used to scale the current controller de-coupling.		
p1727[0...n]	Quadrature arm decoupling at voltage limit scaling / TrnsvDecplVmaxScal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	200.0 [%]	50.0 [%]
Description:	Sets the scaling of quadrature arm decoupling when the voltage limit is reached.		
r1728	De-coupling voltage direct axis / U_dir-axis_decoupl		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual output of the quadrature channel de-coupling for the d axis.		
r1729	De-coupling voltage quadrature axis / U_quad_decoupl		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the actual output of the quadrature channel de-coupling for the q axis.		

p1730[0...n]	Isd controller integral component shutdown threshold / Isd ctrl Tn shutd		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	30 [%]	150 [%]	30 [%]

Description: Sets the speed threshold for deactivating the integral component of the Isd controller. The d current controller is only effective as P controller for speeds greater than the threshold value. Instead of the integral component, the quadrature arm decoupling is effective.

Warning:  For settings above 80%, the d current controller is active up to the field weakening limit. When operated at the voltage limit, this can result in an unstable behavior. In order to avoid this, the dynamic voltage reserve p1574 should be increased.

Note: The parameter value is referred to the synchronous rated motor speed.

p1731[0...n]	Isd controller combination current time component / Isd ctr I_combi T1		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the time constant to calculate the d current DC component difference (combination current) to add to the d current controller actual value.

Note: It is not added for p1731 = 0.

r1732[0...1]	CO: Direct-axis voltage setpoint / Direct U set		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 5700, 5714, 6714, 5718
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Display and connector output for the direct axis voltage setpoint Ud.

Index: [0] = Unsmoothed
[1] = Smoothed with p0045

r1733[0...1]	CO: Quadrature-axis voltage setpoint / Quad U set		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6714, 6731
	P-Group: Closed-loop control	Unit group: 5_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Display and connector output for the quadrature axis voltage setpoint Uq.

Index: [0] = Unsmoothed
[1] = Smoothed with p0045

p1740[0...n]		Gain resonance damping for encoderless closed-loop control / Gain res_damp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.000	10.000	0.025	
Description:	Defines the gain of the controller for resonance damping for operation with sensorless vector control in the range that current is injected.			

p1744[0...n]		Motor model speed threshold stall detection / MotMod n_thr stall		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505	
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [rpm]	210000.00 [rpm]	100.00 [rpm]	
Description:	Sets the speed threshold value to detect a stalled motor. If the adaptation controller output exceeds the parameterized speed difference, then in status word r1408.11 is set = 1.			
Dependency:	If a stalled drive is detected (r1408.11 = 1), fault F07902 is output after the delay time set in p2178. Refer to: p2178			
Note:	Speed monitoring is only effective in operation with a speed encoder (refer to p1300). Stalling is also identified if steps/jumps occur in the speed signal, which exceed the value in p0492.			

p1745[0...n]		Motor model error threshold stall detection / MotMod ThreshStall		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [%]	2000.0 [%]	5.0 [%]	
Description:	Sets the fault threshold in order to detect a motor that has stalled. If the error signal (r1746) exceeds the parameterized error threshold, then status signal r1408.12 is set to 1.			
Dependency:	If a stalled drive is detected (r1408.12 = 1), fault F07902 is output after the delay time set in p2178. Refer to: p2178			
Note:	Monitoring is only effective in the low-speed range (below p1755 * (100% - p1756)). For induction motors (ASM), when operated with speed encoder, the following applies: For p1745 = 2000%, checking the fault signal r1746 is deactivated, and the stall monitoring is realized solely by evaluating the flux difference.			

r1746		Motor model error signal stall detection / MotMod sig stall		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	- [%]	- [%]	- [%]	
Description:	Signal to initiate stall detection			
Note:	The signal is not calculated while magnetizing and only in the low speed range (below p1755 * (100 % - p1756)).			

2 Parameters

2.2 List of parameters

p1747[0...n]	Motor model pulse technique transition speed / MotMod puls tech n		
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, SESM, REL Min 0.00 [rpm]	Calculated: CALC_MOD_REG Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 4 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the transition (corner) speed for the smooth and bumpless transition into the small signal motor model for encoderless operation of the synchronous-reluctance motor (RESM).		
Note:	RESM: reluctance synchronous motor (synchronous reluctance motor)		

p1748[0...n]	Motor model changeover speed lower / MotMod n_chgov low		
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, REL, RESM Min 0.00 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 90.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50.00 [%]
Description:	Separately excited synchronous motor: Sets the lower speed for the transition "n_set -> n_act" in encoderless operation. This value is entered as a percentage referred to p1749.		
Dependency:	Refer to: p1749, p1752		

p1749[0...n]	Motor model upper changeover speed / increase changeover speed / Up/incr n_chgov		
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: PMSM, REL Min 0.00 [%]	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 99.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50.00 [%]
Description:	Separately excited synchronous motor: Sets the upper speed for the transition "n_set -> n_act" in sensorless operation. This value is entered as a percentage of p1755. Induction motor without speed encoder: Depending on the motor data, the drive has calculated a minimum value of the operating frequency for rugged operation. If the minimum value is greater than the lower changeover limit parameterized with $p1755 * (1 - 2 * p1756)$, then the difference is displayed using $p1749 * p1755$. The parameter value cannot be changed.		
Dependency:	Refer to: p1748, p1752, p1755, p1756		
Note:	RESM: reluctance synchronous motor (synchronous reluctance motor)		

p1750[0...n]	Motor model configuration / MotMod config		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 bin

Description:

Sets the configuration for the motor model.

Bit 0 = 1: Forces open-loop speed-controlled starting (ASM).

Bit 1 = 1: Forces the system to pass through frequency zero, open-loop-controlled (ASM).

Bit 2 = 1: Drive remains in full closed-loop control mode, even at zero frequency (ASM).

Bit 3 = 1: Motor model evaluates the saturation characteristic (ASM).

Bit 4 = 1: Time-controlled change between current and observer models (ASM).

Bit 5 = 1: test signal technique (pulse technique) to estimate the progressing (RESM, PMSM).

Bit 6 = 1: If the motor is blocked, sensorless vector control remains speed-controlled (ASM).

For a stalled (blocked) synchronous motor (PMSM), the sensorless vector control remains open-loop speed controlled.

Bit 7 = 1: Use rugged switchover limits to switchover the model between open-loop and closed-loop controlled operation (ASM).

Bit 8 = 1: Open-loop speed controlled operation independent of the speed setpoint (except for OFF3) (ASM).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled start	Yes	No	-
01	Controlled through 0 Hz	Yes	No	-
02	Closed-loop ctrl oper. down to zero freq. for passive loads	Yes	No	-
03	Motor model Lh_pre = f(PsiEst)	Yes	No	-
04	Model changeover	Time controlled	Freq. controlled	-
05	Closed-loop controlled operation down to f = 0 Hz w/ test signal	Yes	No	-
06	Closed-/open-loop controlled when motor is blocked	Yes	No	-
07	Use rugged changeover limits	Yes	No	-
08	Closed-loop controlled until wait time p1758 has expired	Yes	No	-

Caution:

Do not use bit 6 = 1 if the motor can be slowly reversed by the load at the torque limit. Long delay times due to blocking (p2177 > p1758) can cause the motor to stall. In this case you should deactivate the function or use closed-loop control throughout the speed range (note the information re bit 2 = 1).

Note:

Bit 0 ... 3 only have influence for sensorless vector control, bit 4 only for vector control with encoder. Bit 2 is pre-assigned depending on p0500.

For bit 02 = 1:

The sensorless vector control is effective down to zero frequency. A change is not made into the open-loop speed controlled mode.

This operating mode is possible for passive loads. These include applications where the load itself does not generate any active torque and therefore only acts reactively to the drive torque of the induction motor.

If bit 2 = 1, then bit 3 is automatically set to 1. Manual deselection is possible and may be sensible if the saturation characteristic (p1960) was not measured for third-party motors. Generally, for standard SIEMENS motors, the already pre-assigned (default value) saturation characteristic is adequate.

When the bit is set, the selection of bits 0 and 1 is ignored.

For bit 02 = 0:

If the model feedback is deactivated (p1784 = 0), with bit 2 = 0, then bit 3 is also automatically set to 0.

For bit 05:

This test signal technique (pulse technique) is only supported for synchronous-reluctance motors (RESM) and permanent-magnet synchronous motors (PMSM) with power units (Motor Modules) in the "Booksize" format.

It is only possible to change bit 5 when the pulses are inhibited.

For p1750.5 = 1, initially p1810.3 is set, and then a system power up is requested via F01040 to configure the power unit in the oversampling mode.

When deactivating p1750.5 = 0, p1810.3 remains unchanged. As a consequence, to undo the configuration of the power unit from the oversampling mode you must perform the following (after manually deselecting p1750.5), then initially p1810.3 must be manually deleted - and then a manual warm restart initiated.

As an alternative to a warm restart: save the parameters and carry out a POWER ON (switch-off/switch-on).

When the function "safety without encoder" (p9306/p9506) is activated, this setting is not permissible and results in monitoring errors.

For bit 06 = 1:

The following applies for sensorless vector control of induction motors:

For a blocked motor (see p2175, p2177) the time condition in p1758 is bypassed and a change is not made into open-loop controlled operation.

The following applies for sensorless vector control of synchronous motors:

For a blocked motor (see p2175, p2177), the speed ramp-function generator is held in open-loop speed controlled operation, and a switchover is not made into closed-loop controlled operation.

For bit 07 = 1:

The following applies for sensorless vector control of induction motors:

If the changeover limits are parameterized too low (p1755, p1756), then they are automatically increased to rugged values by the absolute amount p1749 * p1755.

The effective time condition for changing over into open-controlled operation is obtained from the minimum of p1758 and 0.5 * r0384.

Activation can make sense for applications that demand a high torque at low frequencies and therefore low speed gradients.

Adequate parameterization must be ensured (p1610, p1611).

For bit 08 = 1: no influence on the functionality of bits 0, 1, 2

The following applies for sensorless vector control of induction motors:

Changeover into open-loop speed controlled operation is no longer dependent on the speed setpoint (except for OFF3), but instead is essentially dependent on time condition p1758. As a consequence, a drive can be started or reversed in closed-loop speed controlled operation with setpoints from an external control system, if these briefly lie in the open-loop speed control range.

r1751

Motor model status / MotMod status

VECTOR_G (n/M)

Can be changed: -	Calculated: -	Access level: 3
Data type: Unsigned32	Dyn. index: -	Func. diagram: -
P-Group: Closed-loop control	Unit group: -	Unit selection: -
Not for motor type: SESM, REL	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	-

Description:

Displays the status of the motor model.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Controlled operation	Active	Inactive	6721
01	Set ramp-function generator	Active	Inactive	-
02	Stop RsLh adaptation	Yes	No	-
03	Feedback	Active	Inactive	-
04	Encoder operation	Active	Inactive	-
05	Holding angle	Yes	No	-
06	Acceleration criterion	Active	Inactive	-
07	Set angle integrator PMSM, RESM	Yes	No	-
08	Stop Kt adaptation PMSM	Yes	No	-
09	PolID active encoderless PMSM, RESM	Yes	No	-
10	I injection PMSM, RESM	Yes	No	-
11	Speed controller output cannot be set to zero	Yes	No	-
12	Rs adapt waits	Yes	No	-
13	Motor operation	Yes	No	-
14	Stator frequency sign	Positive	Negative	-
15	Torque sign	Motor mode	Regenerative mode	-
16	Pulse technique injection active PMSM, RESM	Yes	No	-

17	Operation with rugged model feedback	Enabled	Inhibited	-
18	Operation of the current model with current feedback	Enabled	Inhibited	-
19	Current feedback in the current model	Active	Inactive	-
20	Rugged increase of the changeover limits	Active	Inactive	-
21	Motor blocked (RFG stop) PMSM	No	Yes	-

Note:

PMSM: permanent-magnet synchronous motor

For bit 17:

Displays the enabled status of the rugged model feedback (p1784).

The feedback is used to increase the parameter ruggedness of the motor model and is effective in the operating range of the two-component closed loop current control.

For bit 18:

Displays the status when enabling the differential current feedback in the current model for operation with encoder.

The function is automatically enabled with p1784 > 0 or p1731 > 0.

The feedback is used for a rugged change between the current model and complete machine model with active rugged model feedback and combination current.

For bit 19:

Displays the currently active stator circuit feedback in current model operation.

For bit 20:

Displays the currently effective increase of the changeover limits by the value p1749 * p1755.

For bit 21:

For a blocked synchronous motor, the speed ramp-function generator is held in the open-loop speed controlled operating range if the torque setpoint reaches the torque limit and the speed is less than the threshold value in p2175.

p1752[0...n] Motor model changeover speed operation with encoder / MotMod n_chgov enc

VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description:

Sets the speed to change over the motor model for operation with encoder.

Dependency:

In U/f characteristic mode the parameter is of no significance.

Using the friction characteristic for operation with encoder:

When changing the motor model changeover speed p1752, the points along the friction characteristic should be recalculated (p0340 = 5) and the friction characteristic recorded again (p3845). For slight changes, only the associated friction characteristic points must be recorded (see p3844).

Refer to: p1756

p1753[0...n] Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE

VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	90.0 [%]	0.0 [%]

Description:

Sets the hysteresis for the changeover speed of the motor model for operation with speed encoder.

Dependency:

Refer to: p1752

Note:

The value refers to p1752.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1752 * p1753; in the case of all other types of motor, p1752 * (1 - p1753) is used.

p1754[0...n]	Flux angle difference smoothing time / Angle diff T_smth		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6733
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [ms]	10000.0 [ms]	5.0 [ms]
Description:	Sets the smoothing time constant to filter the main flux angle difference from the voltage and current models. The filtered value is included in the calculation of the total flux angle. PMSM: Sets the smoothing time constant to display the angular difference between the motor model and encoder.		
Note:	In the case of a separately excited synchronous motor (SESM) and sensorless vector control, the parameter must be set to the minimum value to improve motor model changeover. PMSM: permanent-magnet synchronous motor SESM: separately excited synchronous motor		
p1755[0...n]	Motor model changeover speed encoderless operation / MotMod n_chgSnsorl		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]
Description:	Sets the speed to change over the motor model to encoderless operation.		
Dependency:	In U/f characteristic mode the parameter is of no significance. Refer to: p1749, p1756		
Notice:	The changeover speed represents the steady-state minimum speed up to which the motor model can be used in sensorless steady-state operation. If the stability is not adequate close to the changeover speed, it may make sense to increase the parameter value.		
Note:	The changeover speed applies for the changeover between open-loop and closed-loop control mode.		
p1756	Motor model changeover speed hysteresis encoderless operation / MotMod n_chgov hys		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6730, 6731, 6732, 6733
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	95.0 [%]	50.0 [%]
Description:	Sets the hysteresis for the changeover speed of the motor model for encoderless operation. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with $p1756 * p1755$; in the case of all other types of motor, $p1755 * (1 - p1756)$ is used.		
Dependency:	In U/f characteristic mode the parameter is of no significance. Refer to: p1755		
Note:	The parameter value refers to p1755. In the case of separately excited synchronous motors, the lower hysteresis value is calculated with $p1755 * p1756$; in the case of all other types of motor, $p1755 * (1 - p1756)$ is used.		

p1757[0...n]	Motor model w/o enc. op./cl.-loop controlled stab. controller Kp / MotMod w/o enc Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01	10.00	0.70
Description:	Sets the gain of the transient response controller when the motor model changes over from open-loop controlled operation to closed-loop controlled operation.		
Note:	Only for ASM and PSM in encoderless operation: The settling range starts at $0.5 * p1755 * p1756$. For ASM, it ends at $p1755 * p1756$, or for p1755, if p1759 is at the maximum value. For PSM it always ends at $p1755 * p1756$.		
p1758[0...n]	Motor model changeover delay time closed/open-loop control / MotMod t cl_op		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	100 [ms]	10000 [ms]	1000 [ms]
Description:	Sets the minimum time for falling below the changeover speed when changing from closed-loop controlled operation to open-loop controlled operation.		
Dependency:	The wait time has no significance if the setpoint speed before the ramp-function generator lies in the open-loop speed controlled operating range. In this case, the change is made without any delay. Refer to: p1755, p1756		
Note:	If p1758 is changed, commissioning must be selected in order to validate the value for the blocking monitoring.		
p1759[0...n]	Motor model changeover delay time open/closed-loop control / MotMod t op_cl		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	2000 [ms]	0 [ms]
Description:	Sets the minimum time for a transition from open-loop controlled to closed-loop controlled operation after the lower changeover speed $p1755 * (1 - p1756 / 100 \%)$ has been exceeded.		
Dependency:	Refer to: p1755, p1756		
Note:	With $p1759 = 2000$ ms, the delay time becomes ineffective and the model changeover is determined by the output frequency only (changeover for p1755).		
p1760[0...n]	Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3

	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the P component of the controller for speed adaptation.

Index:
 [0] = Summed signal
 [1] = Model_1
 [2] = Model_2

r1771 CO: Motor model speed adaptation I comp. / MotMod n_adapt Tn

VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6730
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: SESM, REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the I component of the controller for speed adaptation.

r1773[0...1] Motor model slip speed / MotMod slip

VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: 3_1	Unit selection: p0505
	Not for motor type: SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [rpm]	- [rpm]	- [rpm]

Description: Displays estimated (speed) signals of the motor model.
 r1773[0]: Displays the estimated (mechanical) slip of the motor model.
 r1773[1]: Displays the estimated input speed of the motor model.

Index:
 [0] = Slip speed estimated
 [1] = Speed estimated

p1774[0...n] Motor model offset voltage compensation alpha / MotMod offs comp A

VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-5.000 [V]	5.000 [V]	0.000 [V]

Description: Sets the offset voltage in the alpha direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the power unit.

Note: The value is pre-set during the rotating measurement.

p1775[0...n] Motor model offset voltage compensation beta / MotMod offs comp B			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-5.000 [V]	5.000 [V]	0.000 [V]
Description:	Sets the offset voltage in the beta direction; this compensates the offset voltages of the drive converter/inverter at low speeds. The value is valid for the rated (nominal) pulse frequency of the power unit.		
Note:	The value is pre-set during the rotating measurement.		

r1776[0...6] Motor model status signals / MotMod status sig			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the internal status signals of the motor model. For index [0]: Changeover ramp between current and voltage models. For index [1]: Changeover ramp for model feedback (only encoderless induction motors). For index [2]: Changeover ramp for frequency in the zero range (only encoderless induction motors). For index [3]: Transition ramp actual speed from speed setpoint to model value (SESM without encoder) For index [4]: Speed controller enable (SESM encoderless). For index [5]: Transition ramp between current and voltage model (SESM without encoder). For index [6]: Transition ramp for EMF deviation at PLL input (PMSM without encoder)		
Index:	[0] = Changeover ramp motor model [1] = Changeover ramp model tracking [2] = Changeover ramp zero frequency induction motor without encoder [3] = Changeover ramp actual speed SESM without encoder [4] = Enable speed controller SESM without encoder [5] = Changeover ramp motor model SESM without encoder [6] = Changeover ramp motor model PMSM without encoder		
Note:	For index [3...5]: Are only relevant in the case of encoderless control of separately excited synchronous motors.		

r1778 Motor model flux angle difference / MotMod ang diff			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Induction motor (ASM): Displays the difference between the motor model flux angle and the transformation angle. Permanent-magnet synchronous motor (PMSM): Displays the angular difference between motor model and encoder.		

2 Parameters

2.2 List of parameters

Dependency: A setting for smoothing the display can be made using p1754.

r1779	Motor model absolute flux / MotMod abs flux		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the absolute value of the flux of the motor model.		

p1780[0...n]	Motor model adaptation configuration / MotMod adapt conf		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0111 1100 bin
Description:	Sets the configuration for the adaptation circuit of the motor model. Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation. Permanent-magnet synchronous motor (PMSM): kT		

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	Select motor model ASM Rs adaptation	Yes	No	-
	02	Select motor model ASM Lh adaptation	Yes	No	-
	03	Select motor model PMSM kT adaptation	Yes	No	-
	04	Select motor model offset adaptation	Yes	No	-
	05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
	06	Select pole position identification PMSM encoderless	Yes	No	-
	07	Select T(valve) with Rs adaptation	Yes	No	-
	08	Deselect prelim. meas. of inductance for pole position ident.	Yes	No	-
	10	Filter time combination current like current ctrl integral time	Yes	No	-
	11	Fast flying restart with voltage model for induction motor	Yes	No	-
	12	Start PMSM sensorless with last angle	Yes	No	-
	13	Fast pulsed pole position identification	Yes	No	-
	14	Delay of the precontrol speed to the motor model	Yes	No	-
	15	RESM Q flux model linear	Yes	No	-

Dependency: In U/f characteristic operating mode, only bit 7 and bit 11 are relevant.
For active motor model feedback (see p1784), the Lh adaptation is internally deactivated automatically.
When the power units are connected in parallel with separate, offset motor winding systems (p7003 = 2), then the compensation of the valve interlocking times should be implemented as Rs adaptation (bit 7 = 1).

Caution:

For bit 11:
The selection is not enabled for dv/dt filters (see p0230).

Notice:

It is only permissible to change bit 11 if the drive is switched off.
When selecting bit 11, also for U/f characteristic operation, a standstill measurement must have been performed to set the necessary current controller for a fast flying restart.

Note: ASM: Induction motor
PMSM: permanent-magnet synchronous motor
When selecting the compensation of the valve interlocking via Rs (bit 7), the compensation in the gating unit is deactivated and is instead taken into account in the motor model.
In order that the correction values of the Rs, Lh and kT adaptation (selected using bit 0 ... bit 2) are correctly accepted when changing over the drive data set, a dedicated motor number must be entered into p0826 for each different motor.
For bit 11:
This bit has no influence on flying restart with speed encoder. Depending on the motor, the fast flying restart is suitable for speeds of maximum 1.5x to 4x the rated motor speed.
For bit 12 (only for synchronous motors and bit 6 = 1):
The pole position identification is only carried out after power on and after the motor has coasted down. The switch-off speed p1226 should be as low as possible. If the power unit is switched off when the motor is stationary, then the next time that the power unit is switched on, the old angle is used as starting value. The precondition applies that while the power unit is switched off the motor does not rotate.
For bit 13:
When the bit is set, the duration of the pole position identification is shortened. As a consequence, the pole wheel angle error can be slightly greater.

p1784[0...n]	Motor model feedback scaling / MotMod fdbk scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [%]	1000.0 [%]	0.0 [%]

Description: Sets the scaling for model fault feedback.

Note: Feeding back the measured model fault to the model states increases the control stability and makes the motor model rugged against parameter errors.
When feedback is selected (p1784 > 0), Lh adaptation is not effective.

p1785[0...n]	Motor model Lh adaptation Kp / MotMod Lh Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	10.000	0.100

Description: Sets the proportional gain for the Lh adaptation of the motor model for an induction motor (ASM).

p1786[0...n]	Motor model Lh adaptation integral time / MotMod Lh Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [ms]	10000 [ms]	100 [ms]

Description: Sets the integral time for the Lh adaptation of the motor model for an induction motor (ASM).

r1787[0...n]	Motor model Lh adaptation corrective value / MotMod Lh corr		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [mH]	- [mH]	- [mH]
Description:	Displays the corrective value for the Lh adaptation of the motor model for an induction motor (ASM).		
Dependency:	Refer to: p0826, p1780		
Note:	The adaptation result is reset if the magnetizing inductance of the induction motor is changed (p0360, r0382). This also happens when changing over the data set if a different motor is not being used (p0826). The display of the inactive data sets is only updated when changing over the data set.		
r1791	Motor model Lh adaptation switch-on frequency / MotMod Lh f_on		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4

	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [ms]	10000 [ms]	100 [ms]
Description:	Sets the integral time of the kT adaptation of the motor model for a permanent-magnet synchronous motor (PMSM).		

r1797[0...n]	Motor model kT adaptation corrective value / MotMod kT corr		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6731
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Nm/A]	- [Nm/A]	- [Nm/A]
Description:	Displays the corrective value of the kT adaptation of the motor model for a permanent-magnet synchronous motor (PMSM).		
Dependency:	Refer to: p0826, p1780		
Note:	The display of the inactive data sets is only updated when changing over the data set.		
p1798[0...n]	Motor model pulse technique speed adaptation Kp / MotMod PulsTech Kp		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	1000.000	1.000
Description:	Sets the proportional gain Kp for speed adaptation with active pulse technique for the estimation of the continuous rotor position.		
p1799[0...n]	Motor model pulse technique speed adaptation Tn / MotMod PulsTech Tn		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	10 [ms]
Description:	Sets the integral time Tn for speed adaptation with active pulse technique for the estimation of the continuous rotor position for a synchronous reluctance motor.		
p1800[0...n]	Pulse frequency setpoint / Pulse freq setp		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8021
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000 [kHz]	16.000 [kHz]	4.000 [kHz]
Description:	Sets the pulse frequency for the converter. This parameter is pre-set to the rated converter value when the drive is first commissioned.		
Dependency:	The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values: $p1800 = 1000 / (p0115[0] * 2)$ or $p1800 = n * 1000 / p0115[0]$ with $n = 1, 2, 3, \dots$ Example: $p0115[0] = 250 \mu s \rightarrow p1800 = 2, 4, 8, 12, 16 \text{ kHz}$ Possible setting values can be taken from r0114 (if p0009 = p0010 = 0). Minimum pulse frequency: $p1800 \geq 12 * p1082 * r0313 / 60$		

If p0092 = 1 the sampling times p0115 and the pulse frequency p1800 are checked every time the parameters are downloaded, and reset to the initial values if necessary. This check can be deactivated by setting p0092 = 0 (making this setting does not influence isochronous PROFIBUS operation).

The pulse frequency cannot be changed when motor data identification is active (p1910).

If the pulse frequency is set asynchronously to the current controller sampling time (p1810.12), the following limit applies:

$$p1800 \leq 1000 * 2 / p0115[0]$$

If wobulation is selected (p1810.2), the pulse frequency can only be changed as part of pulse enabling to values with the following ratio:

a) $p1800 \leq 1000 / p0115[0]$ for p1811 > 0 %

b) $p1800 \leq 1000 * 2 / p0115[0]$ for p 1811 = 0 %

When the pulses are inhibited

$$p1800 > 1000 / p0115[0] \rightarrow p1811 = 0$$

$$p1800 > 1000 * 2 / p0115[0] \rightarrow p1810.2 = 0 \text{ and } p1811 = 0$$

(applicable for all indices)

Refer to: r0110, r0111, p0112, p0113, r0114, p0115, r0193, p0230, p1817

Notice:

The pulse frequency p1800 can also be asynchronously set to the current controller sampling time (0.05 kHz increment). To do this, p1810.12 must be set to 1 (secondary condition, see p1810).

Effects:

- switching over the gating unit (p1810.2).
- activating the current actual value correction (p1840.0).
- minimum pulse frequency $1000 * 0.5 / p0115[0]$.
- maximum pulse frequency $1000 * 2 / p0115[0]$.
- fluctuating deadtimes and dynamic performance in the current control loop.
- increased level of current ripple in the current display.

Note:

The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067).

When using output reactors and dv/dt filters (see p0230), the following restrictions apply:

- maximum 4 kHz
- maximum double rated pulse frequency (2.5 or 4 kHz)
- maximum rated pulse frequency for chassis converters with set property bit r0193.14

When using a sine-wave filter as output filter (p0230 = 3), then the pulse frequency cannot be set below the minimum value required for the filter.

For an external sine-wave filter (p0230 = 4), then the minimum pulse frequency is calculated as follows:

$$f_{\text{puls_min}} = 1.6 / (2 * \text{Pi} * \text{root}(p0233 * p0234 * p0235))$$

- p0233 in H

- p0234 in F

In this case, the pulse frequency must be a multiple of the inverse value of the current controller sampling time (p0115[0]).

If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be changed below the minimum value required for the filter.

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

It is not possible to change the pulse frequency as long as motor data identification is selected.

r1801[0...1]		CO: Pulse frequency / Pulse frequency	
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [kHz]	Calculated: - Dyn. index: - Unit group: - Scaling: p2000 Max - [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [kHz]
Description:	Display and connector output for the actual converter switching frequency.		
Index:	[0] = Actual [1] = Modulator minimum value		
Note:	The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290). The following applies for vector drives (p0107): The pulse frequency can also be reduced when changing over the modulator to an optimized pulse pattern. This is used to avoid overcontrol. In the case of chassis power units, two-thirds of the setpoint pulse frequency is displayed in the FLB modulation range.		
p1802[0...n]		Modulator mode / Modulator mode	
VECTOR_G	Can be changed: T Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 19	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the modulator mode.		
Value:	0: Automatic changeover SVM/FLB 1: Flat top modulation (FLB) 2: Space vector modulation (SVM) 3: SVM without overcontrol 4: SVM/FLB without overcontrol 5: SVM with pulse frequency reduction 6: SVM/FLB with pulse frequency reduction 7: No edge modulation up to 100 Hz 8: No edge modulation up to 60 Hz 9: Edge modulation 19: Optimized pulse pattern		
Dependency:	If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), or if the power unit firmware is not able to calculate edge modulation (r0192.0 = 0), then only space vector modulation without overcontrol can be set as modulation type (p1802 = 3). For permanent-magnet synchronous motors and chassis power units, the following applies: Edge modulation or optimized pulse pattern can only be used, if p1810 bit 2 = 1 is set. Refer to: r0192, p0230, p7003		
Notice:	If the pulse patterns are enabled with overmodulation option (p1802 < 3) or edge modulation (p1802 > 6), then the current actual value correction is automatically activated (p1840.0 = 0).		
Note:	When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 1, 2, 5, 6), the modulation depth must be limited using p1803 (default p1803 < 100 %). The higher the overmodulation, the greater the current ripple and torque ripple. When changing p1802[x], the values for all of the other existing indices are also changed. p1802 = 7, 8 should be used if the drive is operated below 100 Hz or 60 Hz, and it is necessary to avoid changing over to edge modulation. Above these output frequencies, the modulation depth remains limited so that there the full output voltage of the edge modulation is not reached. The setting p1802 = 19 is only released for chassis power units and SIMOTICS FD motors.		

2 Parameters

2.2 List of parameters

p1803[0...n]	Maximum modulation depth / Modulat depth max		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6723
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 20.0 [%]	Max 150.0 [%]	Factory setting 100.0 [%]
Description:	Defines the maximum modulation depth.		
Note:	p1803 = 100% is the overcontrol limit for space vector modulation (for an ideal drive converter without any switching delay). If optimized pulse patterns are enabled (edge modulation), then the modulation depth is limited to below the output frequency of 28 Hz as there is no optimized pulse pattern in this range.		
p1804[0...n]	Filter time constant smoothed modulation index / T_filt mod_idx sm		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0 [ms]	Max 10000.0 [ms]	Factory setting 10.0 [ms]
Description:	Filter time constant for the smoothed modulation index to change over the modulator mode.		
p1806[0...n]	Filter time constant Vdc correction / T_filt Vdc_corr		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -

	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	1	9	-	
Description:	Displays the effective modulator mode.			
Value:	1: Flat top modulation (FLB) 2: Space vector modulation (SVM) 3: Edge modulation from 28 Hz; 23:3 4: Edge modulation from 28 Hz; 19:1 5: Edge modulation from 60 Hz; 17:3 6: Edge modulation from 60 Hz; 17:1 7: Edge modulation from 100 Hz; 9:2 8: Edge modulation from 100 Hz; 9:1 9: Optimized pulse pattern			

p1810		Modulator configuration / Modulator config			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Modulation	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0000 0010 bin		
Description:	Sets the configuration for the modulator.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Avg value filter for V_lim (only for Vdc_comp in modulator)	Yes	No	-
	01	DC link voltage compensation in the current control	Yes	No	-
	02	Wobulation activated	Yes	No	-
	03	Current measurement oversampling selected	Yes	No	-
	08	Pulse frequency reduction (speed dependent) stage 1	Yes	No	-
	09	Pulse frequency reduction (speed dependent) stage 2	Yes	No	-
	10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
	12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-
	13	Pulse freq. reduction before optimized pulse patterns for 500 µs	Yes	No	-
	14	Deactivate maximum angular difference adaptation	Yes	No	-
	15	Increase overmodulation range	Yes	No	-
Dependency:	If bit 2 is set from 1 to 0, p1811 = 0 is set.				
Notice:	Bit 1 = 0 can only be set when the pulses are inhibited and for r0192.14 = 1. Bit 2 can only be set to 1 subject to the following prerequisites: - Pulse inhibit - r0192.16 = 1 - p1800 < 2 x 1000/p0115[0] Bit 12 can only be changed subject to the following prerequisites: - preconditions, the same as bit 2 = 1 - p1810.3 = 0 For fast current changes, bit 15 = 1 together with p1802 = 0, 2 and p1803 > 106 % result in a significant increase in the torque ripple. As a consequence, increasing the modulation limit must be checked on an application for application basis.				

Note:

For bit 00 = 0:
Voltage limitation from the minimum of the DC link voltage (lower ripple in the output current, reduced output voltage).

For bit 00 = 1:
Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).
The selection is only valid if the DC link compensation is not performed in the Control Unit (bit 1 = 0).

For bit 01 = 0:
DC link voltage compensation in the modulator.

For bit 01 = 1:
DC link voltage compensation in the current control.

For bit 02 = 0:
A gating unit that does not permit wobulation is used.
Edge modulation is not possible for a parallel connection with a single-winding system (p7003 = 0).
Bit 02 cannot be set to 0 if bit 12 = 1.

For bit 02 = 1:
A gating unit that permits wobulation is used.
For a wobulation amplitude $p1811 = 0$, the maximum possible pulse frequency in $p1800 = 2 \times 1000 / p0115[0]$.
For a wobulation amplitude $p1811 > 0$, the maximum possible pulse frequency in $p1800 = 1000 / p0115[0]$.
If optimized pulse patterns has been activated ($p1802 > 6$), then a parameter save is required and switch off and switch on again. This is displayed using a message (F01040).

For bit 03 = 1:
The actual current value sensing and the determination of the valve ON times takes place with a double current controller clock cycle and phase offset.
The activation is only possible with $r0192.23 = 1$ and $p1810.12 = 0$ - and takes effect the next time the system is powered up.

For bit 08 = 1:
Above the frequency threshold $r1836[0]$, the pulse frequency is switched to the value in $p1800$. Below $r1836[0]$ (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency (see $r0114$).

For bit 09 = 1:
Above the frequency threshold $r1836[1]$, the pulse frequency is increased to the next possible value. Below $r1836[1]$ (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency.

If bit 8 is set to 0, bit 9 is automatically reset.

For bit 10 = 0:
Pulse-locking function activated.

For bit 10 = 1:
Pulse-dropping function activated.

For bit 12 = 0:
The pulse frequency $p1800$ can also be synchronously set to the current controller clock cycle (see $r0114$).
Bit 12 can only be set from 1 to 0 if the pulse frequency $p1800$ is set synchronously to the current controller clock cycle. In this case, the gating unit is not switched over.

For bit 12 = 1:
The pulse frequency $p1800$ can also be asynchronously set to the current controller clock cycle. In this case, the effects should be observed (see $p1800$).
If bit 12 is set to 1, then the gating unit is automatically switched over ($p1810.2 = 1$). If this is not possible (see above), then bit 12 cannot be set to 1.
Bit 12 cannot be set to 1, if $p1810.3 = 1$ is set.

For bit 15 = 1:
For $p1802 = 0, 2$ and $p1803 > 106\%$, dynamically, a modulation depth of more than 106 % is permitted. When $p1803$ is increased, the dynamic modulation depth reserve $p1574$ should be increased so that the maximum output voltage $r0071$ approximately remains the same. For U/f control, the overcontrol in $p1381$ can be separately reduced.

p1811[0...n]	Pulse frequency wobulation amplitude / Puls wobbl ampl			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [%]	20 [%]	0 [%]	
Description:	Sets the amplitude of the statistical wobulation signal. This signal is used to vary the pulse frequency to create a more pleasant sound.			
Note:	p1811 > 0 is possible, if the following applies: - configuration: p1810.2 = 1 (wobulation activated) - pulse frequency: p1800 <= 1000 / p0115[0] - output filter, filter type: p0230 < 3 (no sine-wave filter)			
p1812	BI: Offset calibration output current measurement / Off_calibr I_outp			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 4	
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	1	
Description:	Sets the signal source to activate/deactivate offset calibration for output current measurement.			
Caution:	The absence of offset calibration can have a negative effect on control properties. Offset calibration must be performed before switching on the power unit for the first time after POWER ON.			
				
Note:	Offset calibration is only performed with pulses suppressed and can take up to one second.			
p1814[0...n]	Vdc filter dead band for modulation switchover / Vdc filt dead band			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.0 [%]	12.0 [%]	0.0 [%]	
Description:	Sets the filter dead bandwidth for the DC link voltage signal to switch over the modulation type for optimized pulse patterns. The parameter value refers to the rated line voltage of the power unit.			
Recommendation:	For power units with controlled regenerative line feedback, a value of approximately 2 % is recommended. For all other power units, a value of approximately 8 % (as a result of the increased DC link voltage ripple under load).			
p1815	Phase for PWM generation subgroup / Ph for PWM subgr			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0001 bin	
Description:	Sets bit 0 for recording the power unit in the subgroup for the "offset clocking".			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Recording in subgroup for offset clocking	Yes	No
Dependency:	Refer to: p1818, p1819			

2 Parameters

2.2 List of parameters

Note: A change only becomes effective after booting.
 If one of the following secondary conditions is not fulfilled, then none of the power units from the subgroup are clocked with an offset.
 Secondary conditions for clocking with an offset:
 - the PWM frequency (p1800[D]) of all power units in the subgroup must be the same.
 - the PWM frequency (p1800[D]) must be the same in all drive data sets in the subgroup.
 - the following must apply for the ratio between the PWM cycle (1/p1800[D]) and the current controller cycle (p0115[0]):
 The ratio (1/p1800[D]) / (p0115[0]) must be an even integer number (2, 4, 6, ...) for all power units in the subgroup.
 or
 The ratio (p0115[0]) / (1/p1800[D]) must be an integer number (1, 2, 3, ...) for all power units in the subgroup.

p1816	Set phase for PWM generation manually / Set Ph for PWM		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1	16	-1

Description: Sets manual setting and overwriting of automatically determined phase shift for "offset clocking".
 For p1816 = -1, the following applies:
 Automatic mode. The phase shift value is automatically determined.
 For p1816 = 0 ... 16, the following applies:
 Manual mode. The user should define the phase shift value as follows:
 1. PWM cycle (1/p1800) > current controller cycle (p0115[0])
 The power unit executes a phase shift from Tshift = current controller cycle (p0115[0]) * p1816.
 2. PWM cycle (1/p1800) <= current controller clock cycle (p0115[0])
 For p1816 >= 1, the power unit executes a phase shift from Tshift = PWM cycle/2.
Dependency: Refer to: r0116, p1800, p1819

p1817	Minimum ratio, pulse frequency to the output frequency / Min f_puls / f_max		
VECTOR_G	Can be changed: C2(2)	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	8.3	15.0	12.0

Description: Sets the minimum ratio between the pulse frequency and the output frequency.
Notice: If the ratio between the pulse frequency and the output frequency is reduced, then oscillations can occur in the output current that can result in significant levels of current ripple with the appropriate negative effects.
Note: When the maximum speed is changed, the pulse frequency p1800 is automatically limited to this minimum ratio. It is not permissible to reduce the pulse frequency if this would result in this ratio being undershot.

p1818	Phase for PWM generation configuration / Ph for PWM config		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1

Description: Sets the phase shift for offset clocking.
 For the first active power unit, it is specified whether clocking is to start at 0° (value = 0) or 180° (value = 1). All other active power units are clocked alternately according to the setting made here.
Dependency: Refer to: p1819

Note: A change only becomes effective after a POWER ON.
The parameter is not influenced by setting the factory setting.

p1819		Phase for PWM generation / Ph for PWM		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Modulation	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-1	16	-1	
Description:	Display for "offset clocking". Depending on the particular case, the value is interpreted differently: Case 1: The PWM clock cycle (1/p1800[D]) is greater than the current controller clock cycle (p115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 4 kHz, 2 kHz, 1 kHz). The value displayed refers to: - the phase shift in the current-controller cycles to be executed by the power unit. Case 2: The PWM clock cycle (1/p1800[D]) is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 8 kHz, 16 kHz). The value 1 displayed means that: - the power unit is to apply a phase shift of 180 ° (from the PWM cycle). A value of 0 displayed on all power units of the drive line-up means the following: - the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.			
Dependency:	Refer to: p0108, r0108, p0115, p1800, p1815, p1816, p1818			
Note:	For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that factory setting -1 no longer has any significance and is only available for reasons of compatibility.			

p1820[0...n]		Reverse the output phase sequence / Outp_ph_seq rev		
VECTOR_G	Can be changed: C2(3)	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 6732	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Sets the phase sequence reversal for the motor. If the motor does not rotate in the required direction, then the output phase sequence can be reversed using this parameter. This means that with the same setpoint, the motor direction is reversed without reversing the encoder actual value. When a speed encoder is being used, it may be necessary to also invert the encoder actual value (p0410).			
Value:	0: OFF 1: ON			
Dependency:	Refer to: p1821			
Caution:	For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15. Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.			
				
Note:	This setting can only be changed when the pulses are inhibited. p1821 can be used to reverse the phase sequence and encoder actual value.			

p1821[0...n]	Direction of rotation / Dir of rotation		
VECTOR_G	Can be changed: C2(3) Data type: Integer16	Calculated: - Dyn. index: DDS, p0180	Access level: 3 Func. diagram: 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0	Max 1	Factory setting 0
Description:	Setting to change the direction of rotation. If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.		
Value:	0: Clockwise 1: Counter-clockwise		
Dependency:	Refer to: F07434		
Danger: 	When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.		
Caution: 	For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.		
Notice:	An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled. After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring: - p9516.1/p9316.1 "Position actual value sign change" (only for operation with encoder) - p9539/p9339 "SI Motion gearbox direction of rotation reversal" (also in encoderless operation)		
Note:	For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft. When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]). p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.		

p1821[0...n]	Direction of rotation / Dir of rotation		
VECTOR_G (n/M)	Can be changed: C2(3) Data type: Integer16	Calculated: - Dyn. index: DDS, p0180	Access level: 3 Func. diagram: 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732
	P-Group: Motor Not for motor type: -	Unit group: - Scaling: -	Unit selection: - Expert list: 1
	Min 0	Max 1	Factory setting 0
Description:	Setting to change the direction of rotation. If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.		
Value:	0: Clockwise 1: Counter-clockwise		
Dependency:	Refer to: p6278 Refer to: F07434		
Danger: 	When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.		

Caution:

For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

When using a separately excited synchronous machine with reverse field excitation, when setting p1821, it must be checked as to whether the phase sequence of the exciter converter must also be changed.

Notice:

An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

- p9516.1/p9316.1 "Position actual value sign change" (only for operation with encoder)

- p9539/p9339 "SI Motion gearbox direction of rotation reversal" (also in encoderless operation)

Note:

For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1822 Power unit line phases monitoring tolerance time / PU ph monit t_tol			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	500 [ms]	540000 [ms]	1000 [ms]
Description:	Sets the tolerance time for line phase monitoring for blocksize power units. If a line phase fault is present for longer than this tolerance time, then a corresponding fault is output.		
Dependency:	Refer to: F30011		
Notice:	When operating with a failed line phase, depending on the active power, values higher than the default value can either immediately damage the power unit or damage it over the long term.		
Note:	For the setting p1822 = maximum value, line phase monitoring is deactivated.		

p1825 Converter valve threshold voltage / Threshold voltage			
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Vrms]	100.0 [Vrms]	0.6 [Vrms]
Description:	Sets the threshold voltage drop of the valves (power semiconductor devices) to be compensated.		
Note:	The value is automatically calculated in the motor data identification routine.		

p1828 Compensation valve lockout time phase U / Comp t_lock ph U			
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]
Description:	Sets the valve lockout time to compensate for phase U.		
Notice:	Deadtime compensation is deactivated with p7003 = 2.		
Note:	The value is automatically calculated in the motor data identification routine. For type PM340 power units, the value is limited to 3.98 µs.		

p1829	Compensation valve lockout time phase V / Comp t_lock ph V		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]
Description:	Sets the valve lockout time to compensate for phase V.		
Notice:	Deadtime compensation is deactivated with p7003 = 2.		
Note:	For type PM340 power units, the value is limited to 3.98 µs.		
p1830	Compensation valve lockout time phase W / Comp t_lock ph W		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]
Description:	Sets the valve lockout time to compensate for phase W.		
Notice:	Deadtime compensation is deactivated with p7003 = 2.		
Note:	For type PM340 power units, the value is limited to 3.98 µs.		
p1832	Dead time compensation current level / t_dead_comp I_lev		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [Arms]	10000.0 [Arms]	0.0 [Arms]
Description:	Sets the current level for the dead time compensation.		
	Above the current level, the dead time - resulting from the converter switching delays - is compensated by a previously calculated constant value. If the relevant phase current setpoint falls below the absolute value defined by p1832, the corrective value for this phase is continuously reduced.		
Dependency:	The factory setting of p1832 is automatically set to 0.02 * rated drive converter current (r0207).		
p1835[0...1]	Pulse frequency reduction switchover frequency shift / f_puls_red f_sw		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	800.00 [Hz]	0.00 [Hz]
Description:	Frequency to shift the switchover frequency r1836 for pulse frequency reduction.		
	The parameter value reduces the switchover frequency threshold with the same parameter index.		
Index:	[0] = Frequency limit 1 [1] = Frequency limit 2		
Dependency:	Refer to: r1836		

r1836[0...1]		Pulse frequency reduction, switchover frequency / f_puls_red f_sw			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -		
	P-Group: Modulation	Unit group: -	Unit selection: -		
	Not for motor type: SESM, REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	- [Hz]	- [Hz]	- [Hz]		
Description:	Displays the frequency limits, under which the pulse frequency is automatically reduced. Starting from the parameterized pulse frequency p1800, the pulse frequency is reduced to the next possible one, if the frequency limits and an additional hysteresis are fallen below.				
Index:	[0] = Frequency limit 1 [1] = Frequency limit 2				
Dependency:	Refer to: p1810, p1835				
Note:	The pulse frequency reduction is not active for U/f control. A minimum clearance of 10 Hz is kept between the frequency thresholds, which cannot be fallen below when changing p1835. For index [0]: Frequency limit for the first pulse frequency reduction (active for p1810.8 = 1). For index [1]: Frequency limit for the second pulse frequency reduction (active for p1810.9 = 1).				
r1837		Gating unit configuration / Gating unit config			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -		
	P-Group: Modulation	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display for the configuration of the gating unit driver.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Modulation depth for a flying restart	Limited	Not limited	-

Description: Displays the phase correction voltages and and the drive converter phase voltages

Index:
 [0] = Harmonics phase U
 [1] = Harmonics phase V
 [2] = Harmonics phase W
 [3] = Measured value phase U
 [4] = Measured value phase V
 [5] = Measured value phase W

p1900

Motor data identification and rotating measurement / MotID and rot meas

VECTOR_G	Can be changed: C2(1), T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	2	2

Description: Sets the motor data identification and speed controller optimization.
 p1900 = 0:
 Function inhibited.
 p1900 = 2:
 Induction motors --> set p1910 = 1 and p1960 = 0
 Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0
 When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.
 For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

Value:
 0: Inhibited
 2: Identify motor data (stationary)

Dependency: In the simulation mode, the parameter cannot be written into.
 When selecting the motor data identification routine, the drive data set changeover is suppressed.
 Refer to: p1272, p1300, p1910
 Refer to: F07990, A07991

Notice: If there is a motor holding brake, it must be open (p1215 = 2).
 To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).
 It is not permissible to activate write protection during the motor identification (p7761).
 During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).
 An appropriate alarm is output when the parameter is set.
 The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.
 The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.
 p1900 is automatically set to 0 after the motor data identification routine has been completed.

For a reluctance motor, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

For U/f control (p1300), identification with speed controller optimization does not make sense (e.g. p1900 = 1).

During the rotating measurement it is not possible to save the parameters (p0971, p0977). p1900 = 3: This setting should only be selected if the motor data identification was already carried out at standstill.</p>		

2 Parameters

2.2 List of parameters

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for $p1300 < 20$ (U/f controls).
An appropriate alarm is output when the parameter is set.
The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.
The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.
 $p1900$ is automatically set to 0 after the motor data identification routine has been completed.
For a reluctance motor, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.
For U/f control ($p1300$), identification with speed controller optimization does not make sense (e.g. $p1900 = 1$).

p1901

Test pulse evaluation configuration / Test puls config

VECTOR_G	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description:

Sets the configuration for the test pulse evaluation.
Bit 00: Check for conductor-to-conductor short circuit once/always when the pulses are enabled.
Bit 01: Check for ground fault once/always when the pulses are enabled.
Bit 02: Activation of the tests selected using bit 00 and/or bit 01 each time the pulses are enabled

Recommendation:

If the ground fault test is incorrectly initiated because the motor is not at a complete standstill, then the pulse cancellation delay time ($p1228$) should be increased.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Phase short-circuit test pulse active	Yes	No	-
01	Ground fault detection test pulse active	Yes	No	-
02	Test pulse at each pulse enable	Yes	No	-

Dependency:

The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated ($p1200 = 0$).
When a sine-wave filter is connected, the short-circuit and the ground fault test are deactivated, as the filter could be excited by the test pulse.
Refer to: $p0287$

Note:

If a conductor-to-conductor short-circuit is detected during the test, this is displayed in $r1902.1$.
If a ground fault is detected during the test, this is displayed in $r1902.2$.
For bit 02 = 0:
If the test was successful once after POWER ON (see $r1902.0$), it is not repeated.
For bit 02 = 1:
The test is not only performed after POWER ON, but also each time the pulses are enabled.

r1902

Test pulse evaluation status / Test puls ev stat

VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description:

Displays the status of the test pulse evaluation.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Short-circuit test successfully performed	Yes	No	-
01	Phase short-circuit detected	Yes	No	-
02	Ground fault test successfully performed	Yes	No	-
03	Ground fault detected	Yes	No	-
04	Identification pulse width greater than the minimum pulse width	Yes	No	-

Note: If the ground fault test was selected, but not successfully performed, then sufficient current was not be able to be established during the test pulses.
For bit 04:
A test pulse longer than one sampling time has occurred

p1905		Parameter tuning selection / Par tuning select		
VECTOR_G (n/M)	Can be changed: C2(1), T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Motor identification	Unit group: -	Unit selection: -	
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	90	0	
Description:	The fine encoder calibration should be started during the first commissioning or after the encoder is replaced. The fine calibration starts when the pulses are enabled and performs a rotating measurement (approximately 1 minute). In this case, a setpoint speed of at least 40 % of the motor rated speed must be entered, and the torque must be less than half of the motor rated torque. The phases of the fine calibration of displayed using alarm A07976. The fine calibration ends with the calculation of p0431 for the following pulse inhibit. p1905 is automatically set to 0 at the end of the fine calibration.			
Value:	0: Inactive 90: Fine encoder calibration			
Dependency:	If the motor encoder adjustment has not been performed (p3925.4 = 0) or the encoder calibration is activated (p1990 != 0), then encoder fine calibration is prevented. Refer to: p1272, p1910, p1960, p1990 Refer to: A07976			
Notice:	During encoder fine calibration, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.			
Note:	For p1905 = 90 and with the pulses not enabled, the function is only executed the next time that the pulses are enabled. When selecting the encoder fine calibration, the changeover of the motor data sets is suppressed.			

p1909[0...n]		Motor data identification control word / MotID STW			
VECTOR_G	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3		
	Data type: Unsigned32	Dyn. index: MDS, p0130	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin		
Description:	Sets the configuration for the motor data identification.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Stator inductance estimate no measurement	Yes	No	-
	01	Cl.-loop current control w/ dead-beat controller	Yes	No	-
	02	Rotor time constant estimate no measurement	Yes	No	-
	03	Leakage inductance estimate no measurement	Yes	No	-
	04	Activates the identification dynamic leakage inductance	Yes	No	-
	05	Determine Tr and Lsig evaluation in the time range	Yes	No	-
	06	Activate vibration damping	Yes	No	-
	07	Deactivate vibration detection	Yes	No	-
	11	Deactivate pulse measurement Lq Ld	Yes	No	-
	12	Deactivate rotor resistance Rr measurement	Yes	No	-

2 Parameters

2.2 List of parameters

14	Deactivate valve interlocking time measurement	Yes	No	-
15	Determine only stator resistance, valve voltage fault, dead time	Yes	No	-
16	Short motor identification (lower quality)	Yes	No	-
17	Measurement without control parameter calculation	Yes	No	-
20	Estimate cable resistance	Yes	No	-
22	Only identify circle	Yes	No	-
23	Deactivate circle identification	Yes	No	-
24	Circle identification with 0 and 90 degrees	Yes	No	-
25	Deactivate gating unit switchover	Yes	No	-

Note:

For bit 20 = 1 (only for p0352 = 0 Ohm):

For motors with code number (with the exception of 1LE1, 1PE5, 1PC1), the cable resistance p0352 is calculated from the difference between the measurement results of the overall stator resistance and the stator resistance listed in the motor data sheet.

For all other motors, the stator resistance from the automatic calculation is used instead of that from the motor data sheet.

The following applies to permanent-magnet synchronous motors:

Bit 11 = 0 and "Closed-loop control" operating mode:

The direct inductance L_d and the quadrature inductance L_q are measured at a low current.

Bit 11 = 1 or "U/f" operating mode:

The stator inductance is measured with half the rated motor current.

If the stator inductance is not measured but is to be estimated, then bit 0 should be set and bit 11 should be deselected.

p1910

Motor data identification selection / MotID selection

VECTOR_G

Can be changed: T	Calculated: -	Access level: 2
Data type: Integer16	Dyn. index: -	Func. diagram: -
P-Group: Motor identification	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
0	28	1

Description:

Sets the motor data identification routine.

The motor data identification routine is carried out after the next switch-on command.

p1910 = 1:

All motor data and the drive converter characteristics are identified and then transferred to the following parameters:

p0350, p0354, p0356, p0357, p0358, p0360, p1825, p1828, p1829, p1830

After this, the control parameter p0340 = 3 is automatically calculated.

Value:

- 0: Inhibited
- 1: Complete identification (ID) and acceptance of motor data
- 2: Complete identification (ID) of motor data without acceptance
- 3: ID of the saturation characteristic and acceptance
- 4: ID of the saturation characteristic without acceptance
- 5: ID of dynamic leakage inductance L_{sig} (r1920) without acceptance
- 6: ID of lockout time (r1926) without acceptance
- 7: ID of stator resistance R_s (r1912) without acceptance
- 8: ID of stator inductance L_s (r1915) R_r (r1927) without acceptance
- 9: ID of rotor time constant T_r (r1913) without acceptance
- 10: ID of static leakage inductance L_{sig} (r1914) without acceptance
- 20: Voltage vector input
- 21: Voltage vector input without filter
- 22: Rectangular voltage vector input without filter
- 23: Triangular voltage vector input without filter
- 24: Rectangular voltage vector input with filter
- 25: Triangular voltage vector input with filter
- 26: Enter voltage vector with DTC correction
- 27: Enter voltage vector with AVC
- 28: Enter voltage vector with DTC + AVC correction

- Dependency:** "Quick commissioning" must be carried out (p0010 = 1, concluded with p3900 > 0) before executing the motor data identification routine!
In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.
When the sine-wave filter is connected, p1909.15 must be activated as only the stator resistance can be measured.
Refer to: p1272, p1900
Refer to: F07990, A07991
- Notice:** After the motor data identification (p1910 > 0) has been selected, alarm A07991 is output and a motor data identification routine is carried out as follows at the next switch-on command:
- current flows through the motor and a voltage is present at the drive converter output terminals.
- during the identification routine, the motor shaft can rotate through a maximum of half a revolution.
- however, no torque torque is generated.
- Note:** If there is a motor holding brake, it must be open (p1215 = 2).
To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).
When setting p1910, the following should be observed:
1. "With acceptance" means:
The parameters specified in the description are overwritten with the identified values and therefore have an influence on the controller setting.
2. "Without acceptance" means:
The identified parameters are only displayed in the range r1912 ... r1926. The controller settings remain unchanged.
3. p1910 = 3, 4, 5 can only be selected for induction motors.
4. For settings 27 and 28, the AVC configuration set using p1840 is active.
The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it. The duration of the measurements can lie between 0.3 s and several minutes. This time is mainly influenced by the motor size. p1910 is automatically set = 0 after the motor data identification routine has been completed. If only the stationary measurement is selected, then p1900 is also reset to 0. Otherwise, the rotating measurement is activated.

Description:	Displays the identified (differential) q-inductance.		
Dependency:	Refer to: r1935, p1959, p1960		
Note:	The Lq characteristic consists of the value pairs from p1934 and p1935 with the same index. This value corresponds to the value of the total leakage inductance (r0377).		

r1935[0...9]	q inductance identification current / Lq I_ident		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the identification current to identify the q inductance ([0...9]).		
Dependency:	Refer to: r1934, p1959, p1960		
Note:	The Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.		

p1959[0...n]	Rotating measurement configuration / Rot meas config				
VECTOR_G (n/M)	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 2		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Motor identification	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 0001 1111 bin		
Description:	Sets the configuration of the rotating measurement.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Encoder test active	Yes	No	-
	01	Saturation characteristic identification	Yes	No	-
	02	Moment of inertia identification	Yes	No	-
	03	Re-calculates the speed controller parameters	Yes	No	-
	04	Speed controller optimization (vibration test)	Yes	No	-
	05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-
	11	Do not change the controller parameters during the measurement	Yes	No	-
	12	Measurement shortened	Yes	No	-
	13	After measurement direct transition into operation	Yes	No	-
	14	Calculate speed actual value smoothing time	Yes	No	-
Dependency:	Refer to: F07988				
Note:	The encoder is only tested if the rotating measurement with encoder is selected (p1960 = 2). The following parameters are influenced for the individual optimization steps: Bit 00: None Bit 01: p0320, p0360, p0362 ... p0369 Bit 02: p0341, p0342 Bit 03: p1400.0, p1458, p1459, p1460, p1462, p1463, p1470, p1472, p1496 Bit 04: Dependent on p1960				

Bit 05: p0391, p0392, p0393, p1402.2 only for induction motors

p1960 = 1, 3: p1458, p1459, p1470, p1472, p1496, p1400.0

p1960 = 2, 4: p1458, p1459, p1460, p1462, p1496, p1461, p1463

The identification of the q leakage inductance can only be carried out for unloaded motors or motors with a low load (load approx. 30% below the rated motor torque). Only then is a current controller adaptation (p0391 ... p0393) parameterized if the q-leakage inductance under no-load conditions is at least 30 % higher than the total leakage inductance (p0356, p0358).

For bit 11 = 1:

Bits 02, 03, 04 no longer have any effect. It makes sense to set bit 11 if the speed controller and its adaptation were already set before the measurement.

For bit 12 = 1:

The selection only has an effect on the measurement p1960 = 1, 2. For the shortened measurement, the magnetizing current and moment of inertia are determined with a somewhat lower accuracy.

For bit 13 = 1:

After the measurement has been completed, the system immediately goes into closed-loop speed controlled operation.

p1960		Rotating measurement selection / Rot meas sel	
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2

Value:	<p>0: Inhibited</p> <p>1: Rotating measurement in encoderless operation</p> <p>2: Rotating measurement with encoder</p> <p>3: Speed controller optimization in encoderless operation</p> <p>4: Speed controller optimization with encoder</p>		
Dependency:	<p>Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.</p> <p>In the simulation mode, a value of 1 cannot be written into the parameter.</p> <p>When selecting the rotating measurement, the drive data set changeover is suppressed.</p> <p>When selecting rotating measurement (with the exception for p1959.13 = 1) the following BICO parameters are set to standard values, and after the measurement has been completed, are reset back to the original parameter assignments:</p> <p>p1020 ... p1023, p1070, p1075, p1138, p1139, p1140 ... p1143, p1155, p1160, p1437, p1476, p1477</p> <p>Refer to: p1272, p1300, p1900, p1959, p1967, r1968</p> <p>Refer to: A07987</p>		
Danger:	<p>For drives with a mechanical system that limits the distance moved, it must be ensured that this is not reached during the rotating measurement. If this is not the case, then it is not permissible that the measurement is carried out.</p>		
	<p>Notice:</p> <p>If there is a motor holding brake, it must be open (p1215 = 2).</p> <p>To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).</p> <p>During the rotating measurement it is not possible to save the parameters (p0971, p0977).</p>		

2 Parameters

2.2 List of parameters

Note: When the rotating measurement is activated, it is not possible to save the parameters (p0971, p0977).
Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to the end of the measurement, and if no faults are present, no manual changes should be made.
The ramp-up and ramp-down times (p1120, p1121) are limited, for the rotating measurement, to 900 s.
For speed controller optimization with encoder (p1960 = 2, 4), the speed controller for encoderless operation is also pre-assigned (p1470, p1472).
Depending on whether the speed controller optimization is carried out with or without encoder, different Kp/Tn adaptations of the speed controller are set (p1464, p1465). If the drive should be controlled with as well as without speed encoder, then we recommend the use of two drive data sets (p0180). These can then be executed with different speed controller adaptations.

p1961	Saturation characteristic speed to determine / Sat_char n determ

	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	75 [%]	40 [%]
Description:	Sets the speed for the identification of the moment of inertia and the vibration test. Induction motor: The percentage value is referred to p0310 (rated motor frequency). Synchronous motor: The percentage value is referred to the minimum from p0310 (rated motor frequency) and p1082 (maximum speed).		
Dependency:	Refer to: p0310, p1959 Refer to: F07984, F07985		
Note:	In order to calculate the inertia, sudden speed changes are carried out - the specified value corresponds to the lower speed setpoint. This value is increased by 20 % for the upper speed value. The q leakage inductance (refer to p1959.5) is determined at zero speed and at 50 % of p1965 - however, with a maximum output frequency of 15 Hz and at a minimum of 10% of the rated motor speed.		
p1967	Speed_ctrl_opt dynamic factor / n_opt dyn_factor		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1 [%]	400 [%]	100 [%]
Description:	Sets the dynamic response factor for speed controller optimization. After optimization, the dynamic response achieved is displayed in r1968.		
Dependency:	Refer to: p1959, r1968 Refer to: F07985		
Note:	For a rotating measurement, this parameter can be used to optimize the speed controller. p1967 = 100 % --> speed controller optimization according to a symmetric optimum. p1967 > 100 % --> optimization with a higher dynamic response (Kp higher, Tn lower). If the actual dynamic response (see r1968) is significantly reduced with respect to the required dynamic response (p1967), then this can be as a result of mechanical load oscillations. If, in spite of this load behavior, a higher dynamic response is required, then the oscillation test (p1959.4 = 0) should be deactivated and the measurement repeated.

P-Group: Motor identification

Unit group: -

Unit selection: -

Not for motor type: ASM

Scaling: -

Expert list: 1

Min

Max

Factory setting

1

12

4

Description:

Sets the pole position identification technique.
 The current magnitudes are limited to the rated power unit values.
 p1980 = 1, 8:
 The current magnitude is set using p0329.
 p1980 = 4, 6:
 The current magnitude of the first measurement section is set using p0325, the second using p0329.
 p1980 = 10:
 The rated motor current is impressed to align.
 p1980 = 12: The induced stator voltage is sensed using a VSM and evaluated. This rotor position identification technique can only be used for separately excited synchronous motors with incremental encoder.

Value:

1: Voltage pulsing 1st harmonics
 4: Voltage pulsing 2-stage
 6: Voltage pulsing 2-stage inverse
 8: Voltage pulsing 2nd harmonic inverse
 10: DC current injection
 12: Rotor position sensing VSM for SESM with incremental encoder

Dependency:

When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.
 In the simulation mode, the parameter cannot be written into.
 Refer to: p0325, p0329, p1272, p1780
 Refer to: F07969

Note:

For p1980 = 1, 4, 6, 8:
 Voltage pulse technique cannot be applied to separately excited synchronous motors (p0300 = 5) and for for operation with sine-wave output filters (p0230).
 For p1980 = 12:
 This technique can only be applied for separately excited synchronous motors (SESM) with voltage measurement (VSM).
 The rotor position identification technique (p1980 = 12) cannot be used for permanent-magnet synchronous motors.

p1982[0...n]

PolID selection / PolID selection

VECTOR_G

Can be changed: T

Calculated: -

Access level: 3

Data type: Integer16

Dyn. index: MDS, p0130

Func. diagram: -

P-Group: Motor identification

Unit group: -

Unit selection: -

Not for motor type: ASM, REL

Scaling: -

Expert list: 1

Min

Max

Factory setting

0

2

0

Description:

Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:

0: Pole position identification off
 1: Pole position identification for commutation
 2: Pole position identification for plausibility check

Recommendation: For p1982 = 1:
This is used for synchronous motors with motor encoder without absolute data.
The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.
For separately excited synchronous motors, the position identification is realized using the voltage measurement of a Voltage Sensing Module VSM (p1980 = 12). If there is no VSM then the setting is not possible.
For p1982 = 2:
This is used for synchronous motor with motor encoder with absolute data to check this data.
With p1982 = 2, each time the pulses are enabled it is checked whether the absolute position supplied from the encoder does not exceed a deviation of 45 degrees to the identified pole wheel position.
Not possible for separately excited synchronous motors.

Dependency: Refer to: p0325, p0329, p1980, r1984, r1985, r1987, p1990

Note: For encoderless operation, the pole position identification routine is selected with p1780.6

r1984 PolID angular difference / PolID ang diff

VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]

Description: Displays the angular difference between the actual electrical commutation angle and the angle determined by the pole position identification.

Dependency: Refer to: p0325, p0329, p1980, p1982, r1985, r1987, p1990

Note: PolID: Pole position identification
When the pole position identification routine is executed several times using p1983, the spread of the measured values can be determined using this value. At the same position, the spread should be less than 2 degrees electrical.

r1985 PolID saturation curve / PolID sat_char

VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the saturation curve of the pole position identification (saturation technique).
Displays the current characteristic of the pole position identification routine (elasticity technique).

Dependency: Refer to: p0325, p0329, p1980, p1982, r1984, r1987, p1990

Note: PolID: Pole position identification
Regarding the saturation technique:
The values for the characteristic of the last saturation-based pole position identification routine are output every 1 ms in order to record signals (e.g. trace).

r1987 PolID trigger characteristic / PolID trig_char

VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the trigger characteristic of the pole position identification routine.
The values for the characteristic of the last pole position identification routine are output every 1 ms in order to record signals (e.g. trace).
The values for trigger characteristic and saturation characteristic are always output in synchronism from a time perspective.

2 Parameters

2.2 List of parameters

Dependency: Refer to: p0325, p0329, p1980, p1982, r1984, r1985, p1990
Note: PolID: Pole position identification
The following information and data can be taken from the trigger characteristic.
- the value -100% marks the angle at the start of the measurement.
- the value +100 % marks the commutation angle determined from the pole position identification routine.

p1990 Encoder adjustment determine angular commutation offset / Enc_adj det ang

VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Motor identification	Unit group: -	Unit selection: -
	Not for motor type: ASM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder.
The function acts on the active motor data set.
Alarm A07971 is output while the angular commutation offset is being determined.
p1990 is automatically set to 0 after the angular commutation offset has been determined.
For p1990 = 1 (encoder adjustment with transfer), the following applies:
The angular commutation offset is determined and transferred into p0431.
For p1990 = 2 (encoder adjustment for checking), the following applies:
The angular commutation offset is determined and is not transferred into p0431. For a deviation of more than 6 ° electrical, fault F07413 is output.
For p1990 = 3 (encoder adjustment in operation), the following applies:
PolID procedure runs before the zero mark detection. The angular commutation offset is determined and transferred into p0431. A fine adjustment (p1905) is then optionally possible.

Value:
0: Deactivated
1: Activated with transfer
2: Activated for checking
3: Activates encoder adjustment in operation

Dependency: In the simulation mode, the parameter cannot be written into.
When selecting the encoder adjustment, the changeover of the drive data sets is suppressed.
Encoder adjustment is only carried out if the function module for "speed/torque control" is activated (r0108.2 = 1).
Refer to: p0325, p0329, p0431, p1272, p1900

Caution: When the encoder is being adjusted, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

p1991[0...n] Motor changeover angular commutation correction / Ang_com corr

VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-180 [°]	180 [°]	0 [°]

Description: Sets the angle that is added to the commutating angle.

Caution: If the angular correction is not correctly set, when changing over and with closed-loop torque control, the motor can accelerate to high speeds in spite of the fact that a setpoint of zero has been entered.

p1998[0...n]	PolID circle center point / PolID circ center		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -

	Min	Max	Factory setting
	0.0000 [A]	10000.0000 [A]	0.0000 [A]
Description:	Determined current offset to determine the speed (RESM).		
Dependency:	Refer to: p1980, p1982, r1984, r1985, r1987, p1990		
Note:	RESM: reluctance synchronous motor (synchronous reluctance motor)		
p1999[0...n]	Ang. commutation offset calibr. and PolID scaling / Com_ang_offs scal		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10 [%]	5000 [%]	100 [%]
Description:	Sets the scaling for the runtime of the automatic encoder calibration and of the pole position identification technique in which the current is injected.		
Dependency:	Refer to: p0341, p0342		
Caution:	For p1999 > 100 % (setting large moments of inertia) the following applies: There is no locked rotor monitoring (F07970 fault value 2). The plausibility check of the encoder signal (F07970 fault value 4) only checks the sign.		
			
Note:	For high moments of inertia, it is practical to scale the runtime of the calibration higher.		
p2000	Reference speed reference frequency / n_ref f_ref		
VECTOR_G	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]
Description:	Sets the reference quantity for speed and frequency. All speeds or frequencies specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). The following applies: Reference frequency (in Hz) = reference speed (in ((rpm) / 60) x pole pair number)		
Dependency:	Refer to: p2001, p2002, p2003, r2004		
Note:	For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor. Example 1: The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000). Example 2: The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).		

2 Parameters

	Min	Max	Factory setting	
	6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]	
Description:	Sets the reference quantity for speed and frequency. All speeds or frequencies specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).			
Note:	If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.			

p2000		Reference velocity reference frequency / v_ref f_ref		
ENC (Lin_enc)	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.60 [m/min]	600.00 [m/min]	120.00 [m/min]	
Description:	Sets the reference quantity for velocity and frequency. All velocities or frequencies specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). The following applies: Reference frequency (in Hz) = reference velocity (in (m/min) / 60)			
Note:	If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.			

p2001		Reference voltage / Reference voltage		
VECTOR_G, B_INF	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	10 [Vrms]	100000 [Vrms]	1000 [Vrms]	
Description:	Sets the reference quantity for voltages. All voltages specified as relative value are referred to this reference quantity. This also applies for direct voltage values (= rms value) like the DC link voltage. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). Note: This reference quantity also applies to direct voltage values. It is not interpreted as rms value, but as DC voltage value.			

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.
 If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
 For infeed units, the parameterized device supply voltage (p0210) is pre-assigned as the reference quantity.
 Example:
 The actual value of the DC link voltage (r0070) is connected to a test socket (e.g. p0771[0]). The actual voltage value is cyclically converted into a percentage of the reference voltage (p2001) and output according to the parameterized scaling.

p2002		Reference current / I_ref	
VECTOR_G, B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0.10 [Arms]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: - Scaling: - Max 100000.00 [Arms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [Arms]
Description:	Sets the reference quantity for currents. All currents specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
Notice:	If various DDS are used with different motor data, then the reference quantities remain the same as these are not changed over with the DDS. The resulting conversion factor should be taken into account (e.g. for trace records). Example: p2002 = 100 A Reference quantity 100 A corresponds to 100 % p0305[0] = 100 A Rated motor current 100 A for MDS0 in DDS0 --> 100 % corresponds to 100 % of the rated motor current p0305[1] = 50 A Rated motor current 50 A for MDS1 in DDS1 --> 100 % corresponds to 200 % of the rated motor current		
Note:	For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. SERVO: Pre-assigned value for p0338 > 0.001 is p0338, otherwise 2 * p0305. VECTOR: Pre-assigned value is p0640. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor. For infeed units, the rated line current, which is obtained from the rated power and parameterized rated line supply voltage (p2002 = r0206 / p0210 / 1.73) is pre-assigned as the reference quantity. Example: The actual value of a phase current (r0069[0]) is connected to a test socket (e.g. p0771[0]). The actual current value is cyclically converted into a percentage of the reference current (p2002) and output according to the parameterized scaling.		

p2003		Reference torque / M_ref	
VECTOR_G	Can be changed: T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0.01 [Nm]	Calculated: CALC_MOD_ALL Dyn. index: - Unit group: 7_2 Scaling: - Max 20000000.00 [Nm]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 1.00 [Nm]
Description:	Sets the reference quantity for torque. All torques specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		

2 Parameters

2.2 List of parameters

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Pre-assigned value for p0338 and p0334 > 0.001 is p0338 * p0334, otherwise 2 * p0333.

VECTOR:

Pre-assigned value is 2 * p0333.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total torque (r0079) is connected to a test socket (e.g. p0771[0]). The actual torque is cyclically converted into a percentage of the reference torque (p2003) and output according to the parameterized scaling.

r2004	Reference power / P_ref		
VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: 14_10	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Displays the reference quantity for power. All power ratings specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
Dependency:	This value is calculated as follows: Infeed: Calculated from voltage times current. Closed-loop control: Calculated from torque times speed. Refer to: p2000, p2001, p2002, p2003		
Note:	If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor. The reference power is calculated as follows: - $2 * \text{Pi} * \text{reference speed} / 60 * \text{reference torque (motor)}$ - $\text{reference voltage} * \text{reference current} * \text{root}(3) \text{ (infeed)}$		

p2005	Reference angle / Reference angle		
VECTOR_G, B_INF	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	90.00 [°]	180.00 [°]	90.00 [°]
Description:	Sets the reference quantity for angle. All angles specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
Note:	For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.		

p2006	Reference temperature / Ref temp		
VECTOR_G, B_INF	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.00 [°C]	300.00 [°C]	100.00 [°C]
Description:	Sets the reference quantity for temperature. All temperatures specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
p2006	Reference temperature / Ref temp		
TM31, TM120, TM150	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.00 [°C]	300.00 [°C]	100.00 [°C]
Description:	Sets the reference quantity for temperature. All temperatures specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
p2007	Reference acceleration / a_ref		
VECTOR_G	Can be changed: T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01 [rev/s ²]	500000.00 [rev/s ²]	0.01 [rev/s ²]
Description:	Sets the reference quantity for acceleration rates. All acceleration rates specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).		
Note:	For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor. The reference acceleration is calculated as follows: Reference speed (p2000) converted from 1/min to 1/s divided by 1 s --> p2007 = p2000 [rpm] / (60 [s/min]) * 1 [s]		
r2019[0...7]	Comm IF error statistics / Comm err		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the receive errors at the commissioning interface (RS232).		
Index:	[0] = Number of error-free telegrams [1] = Number of rejected telegrams [2] = Number of framing errors [3] = Number of overrun errors [4] = Number of parity errors		

2 Parameters

2.2 List of parameters

[5] = Number of starting character errors

[6] = Number of checksum errors

[7] = Number of length errors

p2020

CU_G130_DP,
CU_G150_DP

Field bus interface baud rate / Field bus baud

Can be changed: T	Calculated: -	Access level: 2
Data type: Integer16	Dyn. index: -	Func. diagram: -
P-Group: Communications	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
4	13	8

Description:

Sets the baud rate for the fieldbus interface USS.

Value:

4: 2400 baud
5: 4800 baud
6: 9600 baud
7: 19200 baud
8: 38400 baud
9: 57600 baud
10: 76800 baud
11: 93750 baud
12: 115200 baud
13: 187500 baud

Note:

Fieldbus IF: Fieldbus interface
Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.
The parameter is set to the factory setting when the protocol is reselected.

p2021

CU_G130_DP,
CU_G150_DP

Field bus interface address / Field bus address

Can be changed: T	Calculated: -	Access level: 2
Data type: Unsigned16	Dyn. index: -	Func. diagram: -
P-Group: Communications	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
0	31	0

Description:

Displays or sets the address for the fieldbus interface USS.
The address can be set as follows:
1) Using the address switch on the Control Unit.
--> p2021 displays the address setting.
--> A change only becomes effective after a POWER ON.
2) Using p2021
--> Only if an address of 0 or an address that is invalid for the fieldbus selected in p2030 has been set using the address switch.
--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".
--> A change only becomes effective after a POWER ON.

Dependency:

Refer to: p2030

Note:

Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.
The parameter is set to the factory setting when the protocol is reselected.

p2022	Field bus int USS PZD no. / Field bus USS PZD		
CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	16	2
Description:	Sets the number of 16-bit words in the PZD part of the USS telegram for the field bus interface.		
Dependency:	Refer to: p2030		
Note:	The parameter is not influenced by setting the factory setting.		
p2023	Field bus interface USS PKW count / Field bus USS PKW		
CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	127	127
Description:	Sets the number of 16-bit words in the PKW part of the USS telegram for the field bus interface.		
Value:	0: PKW 0 words 3: PKW 3 words 4: PKW 4 words 127: PKW variable		
Dependency:	Refer to: p2030		
Note:	The parameter is not influenced by setting the factory setting.		
p2024[0...2]	Fieldbus interface times / Fieldbus times		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	[0] 1000 [ms] [1] 0 [ms] [2] 0 [ms]
Description:	Sets the time values for the fieldbus interface. For Modbus the following applies: p2024[0, 1]: Not relevant. p2024[2]: Telegram pause time (pause time between two telegrams).		
Index:	[0] = Max. processing time [1] = Character delay time [2] = Telegram pause time		
Dependency:	Refer to: p2020, p2030		
Note:	For p2024[2] (Modbus): If the field bus baud rate is changed (p2020), the default time setting is restored. The default setting corresponds to a time of 3.5 characters (dependent on the baud rate that has been set).		

r2029[0...7]	Field bus interface error statistics / Field bus error		
CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the receive errors on the field bus interface (USS).		
Index:	[0] = Number of error-free telegrams [1] = Number of rejected telegrams [2] = Number of framing errors [3] = Number of overrun errors [4] = Number of parity errors [5] = Number of starting character errors [6] = Number of checksum errors [7] = Number of length errors		
p2030	Field bus interface protocol selection / Field bus protocol		
CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	3	6	3
Description:	Sets the communication protocol for the field bus interface.		
Value:	3: PROFIBUS 6: USS (X140)		
Note:	Changes only become effective after POWER ON. The parameter is not influenced by setting the factory setting.		
p2030	Field bus interface protocol selection / Field bus protocol		
CU_G130_PN, CU_G150_PN	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	7	13	7
Description:	Sets the communication protocol for the field bus interface.		
Value:	7: PROFINET 10: EtherNet/IP 13: Modbus TCP		
Note:	Changes only become effective after POWER ON. The parameter is not influenced by setting the factory setting.		

r2032		Master control control word effective / PcCtrl STW eff			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the effective control word 1 (STW1) of the drive for the master control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON/OFF1	Yes	No	-
	01	OC / OFF2	Yes	No	-
	02	OC / OFF3	Yes	No	-
	03	Enable operation	Yes	No	-
	04	Enable ramp-function generator	Yes	No	-
	05	Start ramp-function generator	Yes	No	-
	06	Enable speed setpoint	Yes	No	-
	07	Acknowledge fault	Yes	No	-
	08	Jog bit 0	Yes	No	3030
	09	Jog bit 1	Yes	No	3030
	10	Master control by PLC	Yes	No	-
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.				
Note:	OC: Operating condition				

r2032		Master control control word effective / PcCtrl STW eff			
B_INF	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the effective control word 1 (STW1) of the drive for the master control.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON/OFF1	Yes	No	-
	01	OC / OFF2	Yes	No	-
	03	Enable operation	Yes	No	-
	07	Acknowledge fault	Yes	No	-
	10	Master control by PLC	Yes	No	-
Notice:	The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.				
Note:	OC: Operating condition				

p2035		Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no		
CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	1	62	2	
Description:	Sets the drive object number for communication via the field bus interface (USS).			
Dependency:	Refer to: p0978			
Note:	p2035 defines the destination for USS parameter requests (PIV). p0978[0] defines the destination for USS process data (PZD). The parameter is available globally on all drive objects. The parameter is not influenced by setting the factory setting.			

2 Parameters

2.2 List of parameters

p2037	IF1 PROFIdrive STW1.10 = 0 mode / IF1 PD STW1.10=0		
VECTOR_G, B_INF, ENC	Can be changed: T Data type: Integer16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the processing mode for PROFIdrive STW1.10 "master control by PLC". Generally, control word 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.		
Value:	0: Freeze setpoints and continue to process sign-of-life 1: Freeze setpoints and sign-of-life 2: Do not freeze setpoints		
Recommendation:	Do not change the setting p2037 = 0.		
Note:	If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.		

p2038	IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode		
VECTOR_G	Can be changed: T Data type: Integer16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Displays the interface mode of the PROFIdrive control words and status words.		
Value:	0: SINAMICS 1: SIMODRIVE 611 universal 2: VIK-NAMUR		
Dependency:	Refer to: p0922, p2079		
Notice:	The parameter is protected and cannot be changed.		
Note:	For telegram selection p0922 (p2079) = 20, then p2038 is automatically set = 2. When another telegram is selected, then p2038 is automatically set = 0.		

p2039	Select debug monitor interface / Debug monit select		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned16 P-Group: Communications Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the serial interface for the debug monitor. The serial interface for the debug monitor is COM1 (X140) or COM2 (internal). Value = 0: COM2 (internal) Value = 1: COM1 (X140), commissioning protocol is deactivated Value = 2: COM2 (internal) Value = 3: Reserved		

p2040	Fieldbus interface monitoring time / Fieldbus t_monit			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0 [ms]	1999999 [ms]	100 [ms]	
Description:	Sets the monitoring time to monitor the process data received via the fieldbus interface. If no process data is received within this time, then an appropriate message is output.			
Dependency:	Refer to: p2030			
Note:	The parameter is only relevant for the setting of the following fieldbus protocols. - USS (X140) (p2030 = 6) - Modbus TCP (p2030 = 13) Value = 0: Monitoring is deactivated.			
p2042	PROFIBUS Ident Number / PB ident No.			
CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Sets the PROFIBUS ident number (PNO-ID). SINAMICS can be operated with various identities on PROFIBUS. This allows the use of a PROFIBUS GSD that is independent of the device (e.g. PROFIdrive VIK-NAMUR with ident number 3AA0 hex).			
Value:	0: SINAMICS 1: VIK-NAMUR			
Note:	Every change only becomes effective after a POWER ON.			
r2043.0...2	BO: IF1 PROFIdrive PZD state / IF1 PD PZD state			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 2410	
	P-Group: Communications	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the PROFIdrive PZD state.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Setpoint failure	Yes	No
	01	Clock cycle synchronous operation active	Yes	No
	02	Fieldbus operation	Yes	No
Dependency:	Refer to: p2044			
Note:	When using the "setpoint failure" signal, the bus can be monitored and an application-specific response triggered when the setpoint fails.			

2 Parameters

2.2 List of parameters

p2044	IF1 PROFIdrive fault delay / IF1 PD fault delay		
VECTOR_G, B_INF, ENC	Can be changed: U, T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 100 [s]	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting 0 [s]
Description:	Sets the delay time to initiate fault F01910 after a setpoint failure. The time until the fault is initiated can be used by the application. This means that it is possible to respond to the failure while the drive is still operational (e.g. emergency retraction).		
Dependency:	Refer to: r2043		
<hr/>			
p2045	CI: PB/PN clock synchronous controller sign-of-life signal source / PB/PN ctrSoL s_src		
VECTOR_G (n/M), ENC	Can be changed: T Data type: Unsigned32 / Integer16 P-Group: Communications Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting 0
Description:	Connector input for the sign-of-life of the clock synchronous PROFIBUS/PROFINET controller. The sign-of-life is expected at bits 12 to 15. Bits 0 to 11 are not evaluated. The sign-of-life signal is normally received in PZD4 (control word 2) from the controller.		
Dependency:	Refer to: p0925, r2065		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
<hr/>			
p2047	PROFIBUS additional monitoring time / PB suppl t_monit		
CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 20000 [ms]	Access level: 3 Func. diagram: 2410 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the additional monitoring time to monitor the process data received via PROFIBUS. Enables short bus faults to be compensated. If no process data is received within this time, then an appropriate message is output.		
Recommendation:	In the isochronous mode, the additional monitoring time should not be set.		
Note:	For controller STOP, the additional monitoring time is not effective.		
<hr/>			
p2048	IF1 PROFIdrive PZD sampling time / IF1 PZD t_sample		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Communications Not for motor type: - Min 1.00 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 16.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4.00 [ms]
Description:	Sets the sampling time for the cyclic interface 1 (IF1).		
Note:	The system only permits certain sampling times and after writing to this parameter, displays the value that has actually been set. For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).

0

4

-

Description: Status display for the PROFIBUS interface.

Value:
 0: OFF
 1: No connection (search for baud rate)
 2: Connection OK (baud rate found)
 3: Cyclic connection with master (data exchange)
 4: Cyclic data OK

Note: For r2054 = 2:

If the state is not exited, then set or check the PROFIBUS address in p0918.

For r2054 = 3:

In state 3 (the LED flashes green), a cyclic connection has been established to the PROFIBUS master; however, one of the following prerequisites is missing for cyclic operation:

- no setpoints are being received as the PROFIBUS master is in the STOP condition.

Only for isochronous operation, the following applies:

- the drive is not in synchronism as the global control (GC) has an error.

For r2054 = 4:

In the status 4 (LED green), the cyclic connection to the PROFIBUS master has been established and setpoints are being received. The clock cycle synchronization is OK, the global control (GC) is error-free.

This state does not provide any statement regarding the quality of the clock cycle synchronous sign-of-life characters on the drive objects.

	15	Bit 15	Inverted	Not inverted	-

Dependency: Refer to: r2094, r2095, p2099

p2099[0...1]	CI: IF1 connector-binector converter signal source / Con/bin S_src		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC	Can be changed: U, T Data type: Unsigned32 / Integer16 P-Group: Communications Not for motor type: - Min	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 3 Func. diagram: 2468 Unit selection: - Expert list: 1 Factory setting 0

Description: Sets the signal source for the connector-binector converter.
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r2094, r2095

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted. p2099[0...1] together with r2094.0...15 and r2095.0...15 forms two connector-binector converters:
Connector input p2099[0] to binector output in r2094.0...15
Connector input p2099[1] to binector output in r2095.0...15

p2100[0...19]	Change fault response fault number / Chng resp F_no		
All objects	Can be changed: U, T Data type: Unsigned16 P-Group: Messages Not for motor type: - Min	Calculated: - Dyn. index: - Unit group: - Scaling: - Max	Access level: 3 Func. diagram: 8050, 8075 Unit selection: - Expert list: 1 Factory setting 0

Description: Selects the faults for which the fault response should be changed

Dependency: The fault is selected and the required response is set under the same index.
Refer to: p2101

2 Parameters

2.2 List of parameters

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Integer16 P-Group: Messages Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 0	Access level: 3 Func. diagram: 8050, 8075 Unit selection: - Expert list: 1 Factory setting 0
--	---	--	--

Description: Sets the fault response for the selected fault.

Value: 0: NONE

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chng resp resp

VECTOR_G	Can be changed: U, T Data type: Integer16 P-Group: Messages Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 7	Access level: 3 Func. diagram: 8050, 8075 Unit selection: - Expert list: 1 Factory setting 0
----------	---	--	--

Description: Sets the fault response for the selected fault.

Value: 0: NONE
1: OFF1
2: OFF2
3: OFF3
5: STOP2
6: Internal armature short-circuit / DC braking
7: ENCODER (p0491)

Dependency: The fault is selected and the required response is set under the same index.

Refer to: p2100

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:

- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

The fault response can only be changed for faults with the appropriate identification (see the List Manual, chapter "Faults and alarms").

Example:

F12345 and fault response = OFF3 (OFF1, OFF2, NONE)

--> The default fault response OFF3 can be changed to OFF1, OFF2 or NONE.

For value = 1 (OFF1):

Braking along the ramp-function generator down ramp followed by a pulse inhibit.

For value = 2 (OFF2):

Internal/external pulse inhibit.

For value = 3 (OFF3):

Braking along the OFF3 down ramp followed by a pulse inhibit.

For value = 5 (STOP2):

n_set = 0

For value = 6 (armature short-circuit, internal/DC braking):

The value can only be set for all motor data sets when p1231 = 3, 4.

a) For synchronous motors (p0300 = 2xx, 4xx), an internal armature short-circuit is executed.

b) For induction motors (p0300 = 1xx), a DC braking is initiated.

For value = 7 (ENCODER (p0491)):

The fault response set in p0491 is executed if applicable.

Note:

IASC: Internal Armature Short Circuit

DCBRK: DC braking

p2101[0...19]	Change fault response response / Chng resp resp		
B_INF	Can be changed: U, T	Calculated: -	Access level: 3

Description:	Sets the signal source for external fault 2.		
Dependency:	Refer to: F07861		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

p2107[0...n]	BI: External fault 2 / External fault 2		
VECTOR_G, B_INF	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 2.		
Dependency:	Refer to: F07861		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

p2108	BI: External fault 3 / External fault 3		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min _	Calculated: - Dyn. index: - Unit group: - Scaling: - Max _	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 3. External fault 3 is initiated by the following AND logic operation: - BI: p2108 negated - BI: p3111 - BI: p3112 negated		
Dependency:	Refer to: p3110, p3111, p3112 Refer to: F07862		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

p2108[0...n]	BI: External fault 3 / External fault 3		
VECTOR_G, B_INF	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min _	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max _	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external fault 3. External fault 3 is initiated by the following AND logic operation: - BI: p2108 negated - BI: p3111 - BI: p3112 negated		
Dependency:	Refer to: p3110, p3111, p3112 Refer to: F07862		
Note:	An external fault is triggered with a 0 signal. If this fault is output at the Control Unit, then it is transferred to all existing drive objects.		

r2109[0...63]	Fault time removed in milliseconds / t_flt resolved ms		
All objects	Can be changed: - Data type: Unsigned32 P-Group: Messages Not for motor type: - Min - [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: 8050, 8060 Unit selection: - Expert list: 1 Factory setting - [ms]
Description:	Displays the system runtime in milliseconds when the fault was removed.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2114, r2130, r2133, r2136, r3115, r3120, r3122		
Notice:	The time comprises r2136 (days) and r2109 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the fault buffer and the assignment of the indices is shown in r0945.		

r2110[0...63]	Alarm number / Alarm number		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 8065 Unit selection: - Expert list: 1 Factory setting -
Description:	This parameter is identical to r2122.		
p2111	Alarm counter / Alarm counter		
All objects	Can be changed: U, T Data type: Unsigned16 P-Group: Messages Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: 8050, 8065 Unit selection: - Expert list: 1 Factory setting 0
Description:	Number of alarms that have occurred after the last reset.		
Dependency:	When p2111 is set to 0, the following is initiated: - all of the alarms of the alarm buffer that have gone [0...7] are transferred into the alarm history [8...63]. - the alarm buffer [0...7] is deleted. Refer to: r2110, r2122, r2123, r2124, r2125		
Note:	The parameter is reset to 0 at POWER ON.		
p2112	BI: External alarm 1 / External alarm 1		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 1.		
Dependency:	Refer to: A07850		
Note:	An external alarm is triggered with a 0 signal.		
p2112[0...n]	BI: External alarm 1 / External alarm 1		
VECTOR_G, B_INF	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 1.		
Dependency:	Refer to: A07850		
Note:	An external alarm is triggered with a 0 signal.		

2 Parameters

2.2 List of parameters

r2114[0...1]	System runtime total / Sys runtime tot		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the total system runtime for the drive unit. The time comprises r2114[0] (milliseconds) and r2114[1] (days). After r2114[0] has reached a value of 86.400.000 ms (24 hours) this value is reset and r2114[1] is incremented.		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: r0948, r2109, r2123, r2125, r2130, r2136, r2145, r2146		
Note:	The time in r2114 is used to display the times for faults and alarms. When the electronic power supply is switched out, the counter values are saved. After the drive unit is switched on, the counter continues to run with the last value that was saved.		
p2116	BI: External alarm 2 / External alarm 2		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 2.		
Dependency:	Refer to: A07851		
Note:	An external alarm is triggered with a 0 signal.		
p2116[0...n]	BI: External alarm 2 / External alarm 2		
VECTOR_G, B_INF	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 2546 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 2.		
Dependency:	Refer to: A07851		
Note:	An external alarm is triggered with a 0 signal.		
p2117	BI: External alarm 3 / External alarm 3		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for external alarm 3.		
Dependency:	Refer to: A07852		
Note:	An external alarm is triggered with a 0 signal.		

p2117[0...n]	BI: External alarm 3 / External alarm 3		
VECTOR_G, B_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 2546
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source for external alarm 3.		
Dependency:	Refer to: A07852		
Note:	An external alarm is triggered with a 0 signal.		
p2118[0...19]	Change message type message number / Chng type msg_no		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Selects faults or alarms for which the message type should be changed.		
Dependency:	Selects the fault or alarm selection and sets the required type of message realized under the same index. Refer to: p2119		
Note:	Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.		
p2119[0...19]	Change message type type / Change type type		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	3	1
Description:	Sets the message type for the selected fault or alarm.		
Value:	1: Fault (F) 2: Alarm (A) 3: No message (N)		
Dependency:	Selects the fault or alarm selection and sets the required type of message realized under the same index. Refer to: p2118		
Note:	Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone. The message type can only be changed for messages with the appropriate identification (exception, value = 0). Example: F12345(A) --> Fault F12345 can be changed to alarm A12345. In this case, the message number that may be possibly entered in p2100[0...19] and p2126[0...19] is automatically removed.		

r2120	CO: Sum of fault and alarm buffer changes / Sum buffer changed		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the sum of all of the fault and alarm buffer changes in the drive unit.		
Dependency:	Refer to: r0944, r2121		
r2121	CO: Counter alarm buffer changes / Alrm buff changed		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	This counter is incremented every time the alarm buffer changes.		
Dependency:	Refer to: r2110, r2122, r2123, r2124, r2125		
r2122[0...63]	Alarm code / Alarm code		
All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of alarms that have occurred.		
Dependency:	Refer to: r2110, r2123, r2124, r2125, r2134, r2145, r2146, r3121, r3123		
Notice:	The properties of the alarm buffer should be taken from the corresponding product documentation.		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). Alarm buffer structure (general principle): r2122[0], r2124[0], r2123[0], r2125[0] --> alarm 1 (the oldest) ... r2122[7], r2124[7], r2123[7], r2125[7] --> Alarm 8 (the latest) When the alarm buffer is full, the alarms that have gone are entered into the alarm history: r2122[8], r2124[8], r2123[8], r2125[8] --> Alarm 1 (the latest) ... r2122[63], r2124[63], r2123[63], r2125[63] --> alarm 56 (the oldest)		
r2123[0...63]	Alarm time received in milliseconds / t_alarm rcv ms		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the system runtime in milliseconds when the alarm occurred.		
Dependency:	Refer to: r2110, r2114, r2122, r2124, r2125, r2134, r2145, r2146, r3121, r3123		
Notice:	The time comprises r2145 (days) and r2123 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the alarm buffer and the assignment of the indices is shown in r2122.		

r2124[0...63]	Alarm value / Alarm value		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays additional information about the active alarm (as integer number).		
Dependency:	Refer to: r2110, r2122, r2123, r2125, r2134, r2145, r2146, r3121, r3123		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the alarm buffer and the assignment of the indices is shown in r2122.		
r2125[0...63]	Alarm time removed in milliseconds / t_alarm res ms		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 8050, 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]
Description:	Displays the system runtime in milliseconds when the alarm was cleared.		
Dependency:	Refer to: r2110, r2114, r2122, r2123, r2124, r2134, r2145, r2146, r3121, r3123		
Notice:	The time comprises r2146 (days) and r2125 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139). The structure of the alarm buffer and the assignment of the indices is shown in r2122.		
p2126[0...19]	Change acknowledge mode fault number / Chng ackn F_no		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	65535	0
Description:	Selects the faults for which the acknowledge mode is to be changed		
Dependency:	Selects the faults and sets the required acknowledge mode realized under the same index Refer to: p2127		
Note:	Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.		
p2127[0...19]	Change acknowledge mode mode / Chng ackn mode		
All objects	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 8050, 8075
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	3	1
Description:	Sets the acknowledge mode for selected fault.		
Value:	1: Acknowledgment only using POWER ON 2: Ack IMMEDIATELY after the fault cause has been removed 3: Acknowledgment only for PULSE INHIBIT		
Dependency:	Selects the faults and sets the required acknowledge mode realized under the same index Refer to: p2126		

2 Parameters

2.2 List of parameters

- Notice:** It is not possible to re-parameterize the acknowledge mode for a fault in the following cases:
- fault number does not exist (exception value = 0).
 - Message type is not "fault" (F).
 - Acknowledge mode is not permissible for the set fault number.
- Note:** Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.
- The acknowledge mode can only be changed for faults with the appropriate identification.
- Example:
 F12345 and acknowledge mode = IMMEDIATELY (POWER ON)
 --> The acknowledge mode can be changed from IMMEDIATELY to POWER ON.

p2128[0...15]		Faults/alarms trigger selection / F/A trigger sel		
All objects	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8050, 8070	
	P-Group: Messages	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	65535	0	
Description:	Sets the faults/alarms for which a trigger signal should be generated in r2129.0...15.			
Dependency:	If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set. Refer to: r2129			

r2129.0...15		CO/BO: Faults/alarms trigger word / F/A trigger word			
All objects	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8070		
	P-Group: Messages	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the trigger signals of the faults/alarms set in p2128[0...15].				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Trigger signal p2128[0]	ON	OFF	-
	01	Trigger signal p2128[1]	ON	OFF	-
	02	Trigger signal p2128[2]	ON	OFF	-
	03	Trigger signal p2128[3]	ON	OFF	-
	04	Trigger signal p2128[4]	ON	OFF	-
	05	Trigger signal p2128[5]	ON	OFF	-
	06	Trigger signal p2128[6]	ON	OFF	-
	07	Trigger signal p2128[7]	ON	OFF	-
	08	Trigger signal p2128[8]	ON	OFF	-
	09	Trigger signal p2128[9]	ON	OFF	-
	10	Trigger signal p2128[10]	ON	OFF	-
	11	Trigger signal p2128[11]	ON	OFF	-
	12	Trigger signal p2128[12]	ON	OFF	-
	13	Trigger signal p2128[13]	ON	OFF	-
	14	Trigger signal p2128[14]	ON	OFF	-
	15	Trigger signal p2128[15]	ON	OFF	-
Dependency:	If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set. Refer to: p2128				
Note:	CO: r2129 = 0 --> None of the selected messages has occurred. CO: r2129 > 0 --> At least one of the selected messages has occurred.				

r2130[0...63]	Fault time received in days / t_fault recv days		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the system runtime in days when the fault occurred.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109, r2114, r2133, r2136, p3100, r3115, r3120, r3122		
Notice:	The time comprises r2130 (days) and r0948 (milliseconds). The time display depends on the selected mode (p3100).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		
r2131	CO: Actual fault code / Act fault code		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the code of the oldest active fault.		
Dependency:	Refer to: r3131, r3132		
Note:	0: No fault present.		
r2132	CO: Actual alarm code / Alarm code act		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the code of the last alarm that occurred.		
Note:	0: No alarm present.		
r2133[0...63]	Fault value for float values / Fault val float		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays additional information about the fault that occurred for float values.		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2136, r3115		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		

r2134[0...63]	Alarm value for float values / Alarm value float		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8065
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays additional information about the active alarm for float values.		
Dependency:	Refer to: r2110, r2122, r2123, r2124, r2125, r2145, r2146, r3121, r3123		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		

r2135.0...15	CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2				
All objects	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2548		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the second status word of faults and alarms.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fault encoder 1	Yes	No	-
	01	Fault encoder 2	Yes	No	-
	02	Fault encoder 3	Yes	No	-
	12	Fault motor overtemperature	Yes	No	8016
	13	Fault power unit thermal overload	Yes	No	8021
	14	Alarm motor overtemperature	Yes	No	8016
	15	Alarm power unit thermal overload	Yes	No	8021

r2136[0...63]	Fault time removed in days / t_fit resolv days		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 8060

	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the control word of faults and alarms.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	07	Acknowledge fault	Yes	No	8060
	10	External alarm 1 (A07850) effective	Yes	No	8065
	11	External alarm 2 (A07851) effective	Yes	No	8065
	12	External alarm 3 (A07852) effective	Yes	No	8065

13	External fault 1 (F07860) effective	Yes	No	8060
14	External fault 2 (F07861) effective	Yes	No	8060
15	External fault 3 (F07862) effective	Yes	No	8060

Dependency: Refer to: p2103, p2104, p2105, p2106, p2107, p2108, p2112, p2116, p2117, p3110, p3111, p3112

r2139.0...15 CO/BO: Status word faults/alarms 1 / ZSW fault/alarm 1

All objects	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2548
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for status word 1 of faults and alarms.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Being acknowledged	Yes	No	-
	01	Acknowledgment required	Yes	No	-
	03	Fault present	Yes	No	8060
	05	Safety message present	Yes	No	-
	06	Internal message 1 present	Yes	No	-
	07	Alarm present	Yes	No	8065
	08	Internal message 2 present	Yes	No	-
	11	Alarm class bit 0	High	Low	-
	12	Alarm class bit 1	High	Low	-
	13	Maintenance required	Yes	No	-
	14	Maintenance urgently required	Yes	No	-
	15	Fault gone/can be acknowledged	Yes	No	-

Note: For bit 03, 05, 07:

These bits are set if at least one fault/alarm occurs. Data is entered into the fault/alarm buffer with delay. For this reason, the fault/alarm buffer should only be read if, after "Fault active" or "Alarm active" occurs, a change is also identified in the buffer (r0944, r9744, r2121).

For bit 06, 08:

These status bits are used for internal diagnostic purposes only.

For bit 12, 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

p2140[0...n] Hysteresis speed 2 / n_hysteresis 2

VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	300.00 [rpm]	90.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the following signals:

"|n_act| <= speed threshold value 2" (BO: r2197.1)

"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: Refer to: p2155, r2197

2 Parameters

2.2 List of parameters

p2141[0...n]	Speed threshold 1 / n_thresh val 1		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8010

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the system runtime in days when the alarm was cleared.		
Dependency:	Refer to: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2145, r3121, r3123		
Notice:	The time comprises r2146 (days) and r2125 (milliseconds).		
Note:	The buffer parameters are cyclically updated in the background (refer to status signal in r2139).		
p2147	Delete fault buffer of all drive objects / Del fault buffer		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: -	Func. diagram: 8060
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to delete the fault buffer of all existing drive objects.		
Value:	0: Inactive 1: Start to delete the fault buffer of all drive objects		
Dependency:	Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136		
Note:	p2147 is automatically set to 0 after execution. In order that faults with "POWER ON" acknowledgment can also be cleared from the fault buffer, POWER ON must first be carried out.		
p2148[0...n]	BI: RFG active / RFG active		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 8011
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the signal "ramp-function generator active" for the following signals/messages: "Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4) "Ramp-up/ramp-down completed" (BO: r2199.5)		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The binector input is automatically pre-assigned to r1199.2. The following applies for SERVO: The pre-assignment using the automatic calculation of the motor/control parameters in the drive (p0340 = 1, 3, 5) is only realized if, at the instant of the calculation, the "setpoint channel" function module is active (r0108.8 = 1). If the calculation in p0340 is not selected when downloading parameters, then the parameter is not pre-assigned.		

p2149[0...n]		Monitoring configuration / Monit config																																	
VECTOR_G	Can be changed: U, T Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 0000 0000 0001 bin																																
Description:	Sets the configuration for messages and monitoring functions.																																		
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Enable alarm A07903</td> <td>Yes</td> <td>No</td> <td>8011</td> </tr> <tr> <td>01</td> <td>Load monitoring only in the 1st quadrant</td> <td>Yes</td> <td>No</td> <td>8013</td> </tr> <tr> <td>03</td> <td>Reserved</td> <td></td> <td></td> <td>-</td> </tr> <tr> <td>06</td> <td>Enable underspeed monitoring</td> <td>Yes</td> <td>No</td> <td>8010</td> </tr> <tr> <td>15</td> <td>Automatic parameterization carried out (p0340 = 1, p3900 > 0)</td> <td>Yes</td> <td>No</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Enable alarm A07903	Yes	No	8011	01	Load monitoring only in the 1st quadrant	Yes	No	8013	03	Reserved			-	06	Enable underspeed monitoring	Yes	No	8010	15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-				
Bit	Signal name	1 signal	0 signal	FP																															
00	Enable alarm A07903	Yes	No	8011																															
01	Load monitoring only in the 1st quadrant	Yes	No	8013																															
03	Reserved			-																															
06	Enable underspeed monitoring	Yes	No	8010																															
15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-																															
Dependency:	Refer to: r2197 Refer to: A07903																																		
Note:	For bit 00: Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act). For bit 01: When the bit is set, the load monitoring is only executed in the 1st quadrant as a result of the positive characteristic parameters (p2182 ... p2190). For bit 03: When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions. For bit 06: When the bit is set, with r2197.1 = 1 (n_act < p2155 speed threshold value 2), then alarm A08721 is output, and with r2199.0 = 1 (n_act < p2161 speed threshold value 3), then fault F07822 is output. For separately excited synchronous motors (without encoder) in torque control (p1501 set), the underspeed speed monitoring is automatically activated if conditions (p0300 = 5, p1300 = 20) for the automatic pre-assignment of the threshold values during commissioning (p0340 = 1) are fulfilled. The alarm threshold p2155 is preassigned with 1.5 * p1755 - and the fault threshold p2161, with p1755. For bit 15: The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out. If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.																																		

p2150[0...n]		Hysteresis speed 3 / n_hysteresis 3		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 300.00 [rpm]	Access level: 3 Func. diagram: 8010, 8011 Unit selection: p0505 Expert list: 1 Factory setting 2.00 [rpm]

Description:	Sets the speed threshold value for the following messages: " n_act <= speed threshold value 2" (BO: r2197.1) " n_act > speed threshold value 2" (BO: r2197.2)		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p2140, r2197

Refer to: A07821

Caution:

The filter monitoring function is deactivated with p2155 = 0.0.

Note:

The parameter is used as alarm threshold for underspeed monitoring.

Monitoring for an underspeed condition is automatically activated internally for encoderless separately-excited synchronous motors in closed-loop torque controlled operation (p0300 = 5, p1300 = 20, p1501 = 1 signal) - and can be manually activated with p2149.6 = 1.

For separately excited synchronous motors, when exiting commissioning (p0340 = 5), this parameter is automatically assigned 1.5 * p1755.

p2156[0...n]

Scaling: -

Expert list: 1

Min

Max

Factory setting

0.00 [rpm]

60000.00 [rpm]

0.00 [rpm]

Description:

Sets the hysteresis speed (bandwidth) for the signal "n_act > n_max" (BO: r2197.6).

Dependency:

Refer to: r1084, r1087, r2197

Notice: For $p0322 = 0$, the following applies: $p2162 \leq 0.1 * p0311$
 For $p0322 > 0$, the following applies: $p2162 \leq 1.02 * p0322 - p1082$
 If one of the conditions is violated, $p2162$ is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative speed limit ($r1087$) the hysteresis is effective below the limit value and for a positive speed limit ($r1084$) above the limit value.
 If significant overshoot occurs in the maximum speed range (e.g. due to load shedding), you are advised to increase the dynamic response of the speed controller (if possible). If this is insufficient, the hysteresis $p2162$ can only be increased by more than 10% of the rated speed when the maximum speed ($p0322$) of the motor is sufficiently greater than the speed limit $p1082$.

Description:	Sets the switch-on delay for the "speed setpoint - actual value deviation in tolerance t_on" signal/message (BO: r2199.4).		

r2169	CO: Actual speed smoothed signals / n_act smth message		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min - [rpm]	Calculated: - Dyn. index: - Unit group: 3_1 Scaling: p2000 Max - [rpm]	Access level: 2 Func. diagram: 8010 Unit selection: p0505 Expert list: 1 Factory setting - [rpm]
Description:	Display and connector output of the smoothed speed actual value for messages.		
Dependency:	Refer to: p2153		
p2174[0...n]	Torque threshold value 1 / M_thresh val 1		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: - Max 20000000.00 [Nm]	Access level: 2 Func. diagram: 8012 Unit selection: p0505 Expert list: 1 Factory setting 5.13 [Nm]
Description:	Sets the torque threshold value for the messages: "Torque setpoint < torque threshold value 1 and n_set reached" (BO: r2198.9) "Torque setpoint < torque threshold value 1" (BO: r2198.10) "Torque setpoint > torque threshold value 1" (BO: r2198.13)		
Dependency:	Refer to: p2195, r2198		
p2175[0...n]	Motor blocked speed threshold / Mot lock n_thresh		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 3 Func. diagram: 8012 Unit selection: p0505 Expert list: 1 Factory setting 120.00 [rpm]
Description:	Sets the speed threshold for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2177, r2198 Refer to: F07900		
Note:	The following applies for sensorless vector control for induction motors: At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor cannot be detected. The following applies for sensorless vector control for permanent magnet synchronous motors: At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor can only be detected if p2175 = p1755, and p1750.6 is set to 1.		
p2177[0...n]	Motor blocked delay time / Mot lock t_del		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min 0.000 [s]	Calculated: CALC_MOD_LIM_REF Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 65.000 [s]	Access level: 2 Func. diagram: 8012 Unit selection: - Expert list: 1 Factory setting 1.000 [s]
Description:	Sets the delay time for the message "Motor blocked" (BO: r2198.6).		
Dependency:	Refer to: p0500, p2175, r2198 Refer to: F07900		

Note: The following applies for sensorless vector control:
 At low speeds a locked motor can only be detected if no change is made to open-loop speed controlled operation. If this is the case, the value in p2177 must be reduced accordingly (p2177 < p1758) before time p2177 has elapsed in order to detect the locked state reliably.
 As countermeasure, it is generally also possible to set p1750.6. This is only not permitted if the drive is slowly reversed by the load at the torque limit (speed below p1755 for longer than p1758).

p2178[0...n]	Motor stalled delay time / Mot stall t_{del}		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_REG	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	10.000 [s]	0.010 [s]
Description:	Sets the delay time for the message "Motor stalled" (BO: r2198.7).		
Dependency:	Refer to: r2198		

p2181[0...n]	Load monitoring response / Load monit resp		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the response when evaluating the load monitoring.		
Value:	0: Load monitoring disabled 1: A07920 for torque/speed too low 2: A07921 for torque/speed too high 3: A07922 for torque/speed out of tolerance 4: F07923 for torque/speed too low 5: F07924 for torque/speed too high 6: F07925 for torque/speed out of tolerance		
Dependency:	Refer to: p2182, p2183, p2184, p2185, p2186, p2187, p2188, p2189, p2190, p2192, r2198 Refer to: A07920, A07921, A07922, F07923, F07924, F07925		
Note:	The response to the faults F07923 ... F07925 can be set. This parameter setting has no effect on the generation of fault F07936.		

p2182[0...n]	Load monitoring speed threshold value 1 / n_{thresh} 1		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	150.00 [rpm]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n _{threshold} 1) --> p2185 (M _{threshold} 1, upper), p2186 (M _{threshold} 1, lower) p2183 (n _{threshold} 2) --> p2187 (M _{threshold} 2, upper), p2188 (M _{threshold} 2, lower) p2184 (n _{threshold} 3) --> p2189 (M _{threshold} 3, upper), p2190 (M _{threshold} 3, lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2183, p2184, p2185, p2186 Refer to: A07926		
Note:	In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.		

p2183[0...n]	Load monitoring speed threshold value 2 / n_thresh 2		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	900.00 [rpm]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower) p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower) p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2182, p2184, p2187, p2188 Refer to: A07926		

p2184[0...n]	Load monitoring speed threshold value 3 / n_thresh 3		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	210000.00 [rpm]	1500.00 [rpm]
Description:	Sets the speed/torque envelope curve for load monitoring. The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds: p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower) p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower) p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)		
Dependency:	The following applies: p2182 < p2183 < p2184 Refer to: p2182, p2183, p2189, p2190 Refer to: A07926		
Note:	In order that the load monitoring can reliably respond, the speed threshold p2184 should always be set higher than the maximum motor speed to be monitored.		

p2185[0...n]	Load monitoring torque threshold 1 upper / M_thresh 1 upper		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	10000000.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2185 > p2186 Refer to: p2182, p2186 Refer to: A07926		
Note:	The upper envelope curve is defined by p2185, p2187 and p2189.		

p2186[0...n] Load monitoring torque threshold 1 lower / M_thresh 1 lower

VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]

Description: Sets the speed/torque / velocity/force envelope curve for the load monitoring.

Dependency: The following applies: p2186 < p2185

Refer to: p2182, p2185

Refer to: A07926

Note: The lower envelope curve is defined by p2186, p2188 and p2190.

p2187[0...n] Load monitoring torque threshold 2 upper / M_thresh 2 upper

VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	10000000.00 [Nm]

Description: Sets the speed/torque / velocity/force envelope curve for the load monitoring.

Dependency: The following applies: p2187 > p2188

Refer to: p2183, p2188

Refer to: A07926

Note: The upper envelope curve is defined by p2185, p2187 and p2189.

p2188[0...n] Load monitoring torque threshold 2 lower / M_thresh 2 lower

VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]

Description: Sets the speed/torque / velocity/force envelope curve for the load monitoring.

Dependency: The following applies: p2188 < p2187

Refer to: p2183, p2187

Refer to: A07926

Note: The lower envelope curve is defined by p2186, p2188 and p2190.

p2189[0...n] Load monitoring torque threshold 3 upper / M_thresh 3 upper

VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	10000000.00 [Nm]

Description: Sets the speed/torque / velocity/force envelope curve for the load monitoring.

Dependency: The following applies: p2189 > p2190

Refer to: p2184, p2190

Refer to: A07926

Note: The upper envelope curve is defined by p2185, p2187 and p2189.

p2190[0...n]	Load monitoring torque threshold 3 lower / M_thresh 3 lower		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3

	P-Group: Messages	Unit group: 7_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]
Description:	Sets the speed/torque / velocity/force envelope curve for the load monitoring.		
Dependency:	The following applies: p2190 < p2189 Refer to: p2184, p2189 Refer to: A07926		
Note:	The lower envelope curve is defined by p2186, p2188 and p2190.		
p2192[0...n]	Load monitoring delay time / Load monit t_del		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [s]	65.00 [s]	10.00 [s]
Description:	Sets the delay time to evaluate the load monitoring.		
p2194[0...n]	Torque threshold value 2 / M_thresh val 2		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	90.00 [%]
Description:	Sets the torque threshold value for the message "Torque utilization < torque threshold value 2" (BO: r2199.11). The message "torque setpoint < p2174" (BO: r2198.10) and "torque utilization < p2194" (BO: r2199.11) are only evaluated after the run-up and the delay time has expired.		
Dependency:	Refer to: r0033, p2195, r2199		
p2195[0...n]	Torque utilization switch-off delay / M_util t_off		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [ms]	1000.0 [ms]	800.0 [ms]
Description:	Sets the switch-off delay time for the negated signal "run-up completed". The message "torque setpoint < p2174" (BO: r2198.10) and "torque utilization < p2194" (BO: r2199.11) are only evaluated after the run-up and the delay time has expired.		
Dependency:	Refer to: p2174, p2194		

p2196[0...n]	Torque utilization scaling / M_util scal		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the scaling factor for torque utilization (r0033).		

r2197.1...13	CO/BO: Status word monitoring 1 / ZSW monitor 1		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2534
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the first status word of the monitoring functions.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	01	n_act <= speed threshold value 2 p2155	Yes	No	8010
	02	n_act > speed threshold value 2 p2155	Yes	No	8010
	03	n_act >= 0	Yes	No	8011
	06	n_act > n_max	Yes	No	8010
	07	Speed setpoint - actual value deviation in tolerance t_off	Yes	No	8011
	13	n_act > n_max (F07901)	Yes	No	-

Note: For bit 01, 02:
The threshold value is set in p2155 and the hysteresis in p2140.
For bit 03:
The hysteresis is set in p2150.
For bit 06:
The hysteresis is set in p2162.
For bit 07:
The threshold value is set in p2163 and the hysteresis is set in p2164.
For bit 13:
Only for internal Siemens use.

r2198.4...12	CO/BO: Status word monitoring 2 / ZSW monitor 2		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 2536
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and BICO output for the second status word of the monitoring functions.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	04	n_set < p2161	Yes	No	8011
	05	n_set > 0	Yes	No	8011
	06	Motor blocked	Yes	No	8012
	07	Motor stalled	Yes	No	8012
	10	M_set < torque threshold value 1	Yes	No	8012
	11	Load in the alarm range	Yes	No	8013
	12	Load in the fault range	Yes	No	8013

2 Parameters

2.2 List of parameters

Note: For bit 10:
The torque threshold value 1 is set in p2174.
For bit 12:
This bit is reset after the fault cause disappears, even if the fault itself is still present.

r2199.0...14		CO/BO: Status word monitoring 3 / ZSW monitor 3																																																									
VECTOR_G	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: 2537 Unit selection: - Expert list: 1 Factory setting -

Description:	Sets the signal source to select a fixed value of the technology controller.		
Dependency:	Refer to: p2220, p2221, p2223		
p2223[0...n]	BI: Technology controller fixed value selection bit 3 / Tec_ctrl sel bit 3		
VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 7950, 7951
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to select a fixed value of the technology controller.		
Dependency:	Refer to: p2220, p2221, p2222		
r2224	CO: Technology controller fixed value effective / Tec_ctr FixVal eff		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7950, 7951
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for the selected and active fixed value of the technology controller.		
Dependency:	Refer to: r2229		

r2225.0	CO/BO: Technology controller fixed value selection status word / Tec_ctr FixVal ZSW			
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Technology	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Display and BICO output for the status word of the fixed value selection of the technology controller.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Technology controller fixed value selected	Yes	No
				FP
				7950, 7951

r2229	Technology controller number actual / Tec_ctrl No. act			
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 7950	
	P-Group: Technology	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the number of the selected fixed setpoint of the technology controller.			
Dependency:	Refer to: r2224			

p2230[0...n]	Technology controller motorized potentiometer configuration / Tec_ctr mop config			
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 7954	
	P-Group: Technology	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 0100 bin	
Description:	Sets the configuration for the motorized potentiometer of the technology controller.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Data save active	Yes	No
	02	Initial rounding-off active	Yes	No
	03	Non-volatile data save active for p2230.0 = 1	Yes	No
	04	Ramp-function generator always active	Yes	No
				FP
				-
				-
				-
Dependency:	Refer to: r2231, p2240			
Notice:	The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion: - Firmware with V2.3 or higher. - Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).			
Note:	For bit 00: 0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p2240. 1: The setpoint for the motorized potentiometer is saved and after ON is entered using r2231. In order to save in a non-volatile fashion, bit 03 should be set to 1. For bit 02: 0: Without initial rounding-off 1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for initial rounding is independent of the ramp-up time and only depends on the selected maximum value (p2237). It is calculated as follows: $r = 0.0001 \times \max(p2237, p2238) [\%] / 0.13^2 [s^2]$ The jerk is active until maximum acceleration is reached ($a_{max} = p2237 [\%] / p2247 [s]$ or $a_{max} = p2238 [\%] / p2248 [s]$); after this, the drive continues to operate with constant, linear acceleration.			

The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.

For bit 03:

0: Non-volatile data save deactivated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for p2230.0 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r2250.

r2231 Technology controller motorized potentiometer setpoint memory / Tec_ctrl mop mem

VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7954
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the setpoint memory for the motorized potentiometer of the technology controller.

For p2230.0 = 1, the last setpoint that was saved is entered after ON.

Dependency: Refer to: p2230

p2235[0...n] BI: Technology controller motorized potentiometer raise setpoint / Tec_ctrl mop raise

VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 7954
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to continually increase the setpoint for the motorized potentiometer of the technology controller.

The setpoint change (CO: r2250) depends on the set ramp-up time (p2247) and the duration of the signal that is present (BI: p2235).

Dependency: Refer to: p2236

p2236[0...n] BI: Technology controller motorized potentiometer lower setpoint / Tec_ctrl mop lower

VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 7954
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to continually reduce the setpoint for the motorized potentiometer of the technology controller.

The setpoint change (CO: r2250) depends on the set ramp-down time (p2248) and the duration of the signal that is present (BI: p2236).

Dependency: Refer to: p2235

p2237[0...n]	Technology controller motorized potentiometer maximum value / Tec_ctrl mop max		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7954
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-200.00 [%]	200.00 [%]	100.00 [%]
Description:	Sets the maximum value for the motorized potentiometer of the technology controller.		
Dependency:	Refer to: p2238		

p2238[0...n]	Technology controller motorized potentiometer minimum value / Tec_ctrl mop min		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7954
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-200.00 [%]	200.00 [%]	-100.00 [%]
Description:	Sets the minimum value for the motorized potentiometer of the technology controller.		
Dependency:	Refer to: p2237		

p2240[0...n]	Technology controller motorized potentiometer starting value / Tec_ctrl mop start		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7954
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-200.00 [%]	200.00 [%]	0.00 [%]
Description:	Sets the starting value for the motorized potentiometer of the technology controller. For p2230.0 = 0, this setpoint is entered after ON.		
Dependency:	Refer to: p2230		

r2245	CO: Technology controller mot. potentiometer setpoint before RFG / Tec_ctr mop befRFG		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7954
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Sets the effective setpoint in front of the internal motorized potentiometer ramp-function generator of the technology controller.		
Dependency:	Refer to: r2250		

p2247[0...n]	Technology controller motorized potentiometer ramp-up time / Tec_ctr mop t_r-up		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7954
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	1000.0 [s]	10.0 [s]
Description:	Sets the ramp-up time for the internal ramp-function generator for the motorized potentiometer of the technology controller.		

Dependency: Refer to: p2248
Note: The time is referred to 100 %.
 When the initial rounding-off is activated (p2230.2 = 1) the ramp-up is correspondingly extended.

p2248[0...n] Technology controller motorized potentiometer ramp-down time / Tec_ctrMop t_rdown

VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7954
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	1000.0 [s]	10.0 [s]

Description: Sets the ramp-down time for the internal ramp-function generator for the motorized potentiometer of the technology controller.

Dependency: Refer to: p2247
Note: The time is referred to 100 %.
 When the initial rounding-off is activated (p2230.2 = 1) the ramp-down is correspondingly extended.

r2250 CO: Technology controller motorized potentiometer setpoint after RFG / Tec_ctr mop aftRFG

VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7954
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the effective setpoint after the internal ramp-function generator for the motorized potentiometer of the technology controller.

Dependency: Refer to: r2245

p2252 Technology controller configuration / Tec_ctrl config

VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Modulation	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0111 bin

Description: Sets the configuration of the technology controller.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ramp-up/down time independent of setpoint sign	Yes	No	-
	01	Integrator independent of Kp	Yes	No	-
	02	Output signal without ramp active	Yes	No	-
	03	Actual value limit	Yes	No	-
	07	Activate Kp adaptation	Yes	No	7958
	08	Activate Tn adaptation	Yes	No	7958

Dependency: Refer to: p2257, p2258, p2267, p2268, p2280, p2285

Note: For bit 00 = 0:
 The ramp-down time (p2258) switches to the ramp-up time (p2257) when the sign for the output signal r2260 changes. When the sign changes, the output signal is kept at zero for one arithmetic cycle.
 For bit 00 = 1:
 When r2260 exhibits a positive gradient, the ramp-up time (p2257) is active; when it exhibits a negative gradient, the ramp-down time (p2258) is active. The sign for r2260 does not have any effect on the ramp time.
 For bit 01 = 0:
 The integration time of the PID controller is evaluated with the gain factor Kp (p2280) (p2285 = integral time).

2 Parameters

2.2 List of parameters

For bit 01 = 1:

The integration time of the PID controller is independent of the gain factor (p2285 = integration time) if p2280 > 0.

For bit 02 = 0:

When the PID controller is deactivated via p2200, the output signal r2294 is reduced to zero via the ramp-down time p2293.

For bit 02 = 1:

When the PID controller is deactivated via p2200, the output signal r2294 is set directly to zero.

For bit 03 = 0:

The actual values are not limited by p2267 and p2268.

For bit 03 = 1:

The actual values are limited by p2267 and p2268.

Description:	Sets the time constant for the setpoint filter (PT1) of the technology controller.		
r2262	CO: Technology controller setpoint after filter / Tec_ctr set aftFlt		
VECTOR_G (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting - [%]
Description:	Display and connector output for the smoothed setpoint after the setpoint filter (PT1) of the technology controller.		

p2263	Technology controller type / Tec_ctrl type		
VECTOR_G (Tech_ctrl)	Can be changed: T Data type: Integer16 P-Group: Technology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the type of technology controller.		
Value:	0: D component in the actual value signal 1: D component in system deviation		
p2264[0...n]	CI: Technology controller actual value / Tec_ctrl act val		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Technology Not for motor type: - Min -	Calculated: - Dyn. index: CDS, p0170 Unit group: - Scaling: PERCENT Max -	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the actual value of the technology controller.		
p2265	Technology controller actual value filter time constant / Tec_ctrl act T		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.000 [s]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 60.000 [s]	Access level: 2 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the time constant for the actual value filter (PT1) of the technology controller.		
r2266	CO: Technology controller actual value after filter / Tec_ctr act aftFlt		
VECTOR_G (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max - [%]	Access level: 2 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting - [%]
Description:	Display and connector output for the smoothed actual value after the filter (PT1) of the technology controller.		
p2267	Technology controller upper limit actual value / Tec_ctrl u_lim act		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -10000.00 [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max 10000.00 [%]	Access level: 3 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting 200.00 [%]
Description:	Sets the upper limit for the actual value signal of the technology controller.		
Dependency:	Refer to: p2252, p2264, p2265, p2271 Refer to: F07426		
Notice:	If the actual value exceeds this upper limit, this results in fault F07426.		
Note:	Limiting only active for p2252.3 = 1.		

p2268	Technology controller lower limit actual value / Tec_ctrl I_lim act		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min -10000.00 [%]	Calculated: - Dyn. index: - Unit group: 9_1 Scaling: PERCENT Max 10000.00 [%]	Access level: 3 Func. diagram: 7958 Unit selection: p0595 Expert list: 1 Factory setting -200.00 [%]
Description:	Sets the lower limit for the actual value signal of the technology controller.		
Dependency:	Refer to: p2252, p2264, p2265, p2271 Refer to: F07426		
Notice:	If the actual value falls below this lower limit, this results in fault F07426.		
Note:	Limiting only active for p2252.3 = 1.		
p2269	Technology controller gain actual value / Tech_ctrl gain act		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Technology Not for motor type: - Min 0.00 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500.00 [%]	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling factor for the actual value of the technology controller.		
Dependency:	Refer to: p2264, p2265, p2267, p2268, p2271		
Note:	For 100%, the actual value is not changed.		
p2270	Technology controller actual value function / Tec_ctr ActVal fct		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: Integer16 P-Group: Technology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 3	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to use an arithmetic function for the actual value signal of the technology controller.		
Value:	0: Output (y) = input (x) 1: Root function (root from x) 2: Square function (x * x) 3: Cube function (x * x * x)		
Dependency:	Refer to: p2264, p2265, p2267, p2268, p2269, p2271		
p2271	Technology controller actual value inversion (sensor type) / Tech_ctrl act inv		
VECTOR_G (Tech_ctrl)	Can be changed: T Data type: Integer16 P-Group: Technology Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1	Access level: 3 Func. diagram: 7958 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to invert the actual value signal of the technology controller. The inversion depends on the sensor type for the actual value signal.		
Value:	0: No inversion 1: Inversion actual value signal		
Caution:	If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!		
			

2 Parameters

2.2 List of parameters

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal of the technology controller.
--> If the actual value increases as the motor speed increases, then p2271 should be set to 0 (no inversion).
--> If the actual value decreases as the motor speed increases, then p2271 should be set to 1 (the actual value signal is inverted).

r2272	CO: Technology controller actual value scaled / Tech_ctrl act scal		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for the scaled actual value signal of the technology controller.		
Dependency:	Refer to: p2264, p2265, r2266, p2267, p2268, p2269, p2270, p2271		

r2273	CO: Technology controller system deviation / Tec_ctrl sys_dev		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: 9_1	Unit selection: p0595
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the system deviation between the setpoint and actual value of the technology controller.		
Dependency:	Refer to: p2263		

p2274	Technology controller differentiation time constant / Tec_ctrl D comp T		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	60.000 [s]	0.000 [s]
Description:	Sets the time constant for the differentiation (D component) of the technology controller.		
Note:	p2274 = 0: Differentiation is disabled.		

p2280	Technology controller proportional gain / Tec_ctrl Kp		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	1000.000	1.000
Description:	Sets the proportional gain (P component) of the technology controller.		
Dependency:	Refer to: p2252		
Note:	p2280 = 0: The proportional gain is disabled.		

p2285	Technology controller integral time / Tec_ctrl Tn		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	60.000 [s]	0.000 [s]
Description:	Sets the integral time (I component, integrating time constant) of the technology controller.		
Dependency:	Refer to: p2252		
Note:	p2285 = 0: The integral time is disabled.		

p2286[0...n]	BI: Hold technology controller integrator / Tec_ctr integ hold		
VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to hold the integrator for the technology controller.		

p2289[0...n]	CI: Technology controller precontrol signal / Tec_ctr prectr_sig		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the precontrol signal of the technology controller.		

p2291	CO: Technology controller maximum limiting / Tec_ctrl max_lim		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-200.00 [%]	200.00 [%]	100.00 [%]
Description:	Sets the maximum limit of the technology controller.		
Dependency:	Refer to: p2292		
Caution:	The maximum limit must always be greater than the minimum limit (p2291 > p2292).		

p2292	CO: Technology controller minimum limiting / Tec_ctrl min_lim		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-200.00 [%]	200.00 [%]	0.00 [%]
Description:	Sets the minimum limit of the technology controller.		
Dependency:	Refer to: p2291		

2 Parameters

2.2 List of parameters

Caution: The maximum limit must always be greater than the minimum limit (p2291 > p2292).

p2293	Technology controller ramp-up/ramp-down time / Tec_ctr t_RU/RD		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [s]	100.00 [s]	1.00 [s]

Description: Sets the ramping time for the output signal of the technology controller.

Dependency: Refer to: p2291, p2292

Note: The time refers to the set maximum and minimum limits (p2291, p2292).

r2294	CO: Technology controller output signal / Tec_ctrl outp_sig		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Display and connector output for the output signal of the technology controller.

Dependency: Refer to: p2295

p2295	CO: Technology controller output scaling / Tec_ctrl outp scal		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-100.00 [%]	100.00 [%]	100.00 [%]

Description: Sets the scaling for the output signal of the technology controller.

p2296[0...n]	CI: Technology controller output scaling / Tec_ctrl outp scal		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2295[0]

Description: Sets the signal source for the scaling value of the technology controller.

Dependency: Refer to: p2295

p2297[0...n]	CI: Technology controller maximum limit signal source / Tec_ctrMaxLimS_src		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2291[0]

Description: Sets the signal source for the maximum limiting of the technology controller.

Dependency: Refer to: p2291

p2298[0...n]	CI: Technology controller minimum limit signal source / Tec_ctrl min_l s_s		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2292[0]
Description:	Sets the signal source for the minimum limiting of the technology controller.		
Dependency:	Refer to: p2292		

p2299[0...n]	CI: Technology controller limit offset / Tech_ctrl lim offs		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the offset of the output limiting of the technology controller.		

p2306	Technology controller system deviation inversion / Tec_ctr SysDev inv		
VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 7958
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description:	Setting to invert the system deviation of the technology controller. The setting depends on the type of control loop.		
Value:	0: No inversion 1: Inversion		
Caution:	If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!		
			
Note:	The correct setting can be determined as follows: - inhibit the technology controller (p2200 = 0). - increase the motor speed and in so doing, measure the actual value signal (of the technology controller). - if the actual value increases with increasing motor speed, then the inversion should be switched out. - if the actual value decreases with increasing motor speed, then the inversion should be set. If value = 0: The drive reduces the output speed when the actual value rises (e.g. for heating fans, intake pump, compressor). If value = 1: The drive increases the output speed when the actual value increases (e.g. for cooling fans, discharge pumps).		

p2310	CI: Technology controller Kp adaptation input value signal source / Kp adapt inp s_src		
VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 7959
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the input value of the adaptation of proportional gain Kp for the technology controller.		
Dependency:	Refer to: p2252, p2311, p2312, p2313, p2314, p2315, r2316		

p2311 **Technology controller Kp adaptation lower value / Kp adapt lower val**

VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7959
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000	Max 1000.000	Factory setting 1.000

Description: Sets the lower value for the adaptation of proportional gain Kp for the technology controller.
Dependency: Refer to: p2310, p2312, p2313, p2314, p2315, r2316
Caution: The upper value must be set higher than the lower value (p2312 > p2311).

 **Note:** Kp adaptation is activated with p2252.7 = 1.

p2312 **Technology controller Kp adaptation upper value / Kp adapt upper val**

VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7959
	P-Group: Technology	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000	Max 1000.000	Factory setting 10.000

Description: Sets the upper value for the adaptation of proportional gain Kp for the technology controller.
Dependency: Refer to: p2310, p2311, p2313, p2314, p2315, r2316
Caution: The upper value must be set higher than the lower value (p2312 > p2311).

 **Note:** Kp adaptation is activated with p2252.7 = 1.

p2313 **Technology controller Kp adaptation lower starting point / Kp adapt lower pt**

VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2

Description:	Display and connector output for the reference quantity for speed and frequency (p2000). All speeds or frequencies specified as relative value are referred to this reference quantity. The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word). This parameter has the unit rpm.			

2 Parameters

2.2 List of parameters

The following applies:

Reference frequency (in Hz) = reference speed (in rpm) / 60

Dependency:

Refer to: p2000

Note:

This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2700

Description:

Display and connector output of the actual reference quantity for the frequency (p2000).

All frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit Hz.

Dependency:

Refer to: p2000

Note:

This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

Description:

Display and connector output for the actual reference quantity for velocity and frequency.

All velocities or frequencies specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

The following applies:

Reference frequency (in Hz) = reference velocity (in m/min) / 60

Dependency:

Refer to: p2000

Note:

This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

Description:

Connector output of the reference quantity for voltages p2001.

All voltages specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

This parameter has the unit Vrms.

Dependency: Refer to: p2001
Note: This BICO parameter provides the numerical value of the reference quantity p2001 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
 This BICO parameter is not suitable for interconnecting for cyclic communication.

r2702 CO: Reference current / Reference current

VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity for currents p2002.
 All currents specified as relative value are referred to this reference quantity.
 The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
 This parameter has the unit Arms.

Dependency: Refer to: p2002
Note: This BICO parameter provides the numerical value of the reference quantity p2002 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
 This BICO parameter is not suitable for interconnecting for cyclic communication.

r2703 CO: Reference torque / Reference torque

VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity p2003 for torque (r0108.12 = 0) or force (r0108.12 = 1).
 All torques specified as relative values (r0108.12 = 0) or forces (r0108.12 = 1) are referred to this reference quantity.
 The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
 The unit of this parameter is the same as the unit selected for p2003.

Dependency: p0505, r0108.12
 Refer to: p2003
Note: This BICO parameter provides the numerical value of the reference quantity p2003 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
 This BICO parameter is not suitable for interconnecting for cyclic communication.

r2704 CO: Reference power / Reference power

VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity for powers p2004.
 All power ratings specified as relative value are referred to this reference quantity.
 The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
 The unit of this parameter is the same as the unit selected for p2004.

Dependency: This value is calculated as voltage x current for the infeed and as torque x speed for closed-loop controls.
 Refer to: r2004

2 Parameters

2.2 List of parameters

Note: This BICO parameter provides the numerical value of the reference quantity p2004 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

The reference power is calculated as follows:

- $2 * \text{Pi} * \text{reference speed} / 60 * \text{reference torque (motor)}$

- $\text{reference voltage} * \text{reference current} * \text{root}(3) \text{ (infeed)}$

r2705 CO: Reference angle / Reference angle

VECTOR_G, B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity for angles p2005.
All angles specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit degree.

Dependency: Refer to: p2005

Note: This BICO parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2706 CO: Reference temperature / Reference temp

VECTOR_G, B_INF, TM31, TM120, TM150	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity for temperatures.
All temperatures specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit degree Celsius.

Note: This BICO parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

This BICO parameter is not suitable for interconnecting for cyclic communication.

r2707 CO: Reference acceleration / Ref accel

VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity for accelerations p2007.
All acceleration rates specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The unit of this parameter is the same as the unit selected for p2007.

Dependency: r0108.12, p0505
Refer to: p2007

Note: This BICO parameter provides the numerical value of the reference quantity p2007 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value in the currently selected unit can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

p2720[0...n]		Load gear configuration / Load gear config		
VECTOR_G	Can be changed: C2(1, 4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin	
Description:	Sets the configuration for position tracking of a load gear.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Load gear activate position tracking	Yes	No
	01	Axis type	Linear axis	Rotary axis
	02	Load gear reset position	Yes	No
Note:	For the following events, the non-volatile, saved position values are automatically reset: - when an encoder replacement has been identified. - when changing the configuration of the Encoder Data Set (EDS). - when adjusting the absolute encoder again			

p2721[0...n]		Load gear rotary absolute encoder revolutions virtual / Abs rot rev		
VECTOR_G	Can be changed: C2(1, 4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 4194303	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.			
Dependency:	This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).			
Note:	The resolution that is set must be able to be represented using r2723. For rotary axes/modulo axes, the following applies: This parameter is pre-set with p0421 when activating position tracking and can be changed. For linear axes, the following applies: This parameter is pre-assigned with p0421 when activating position tracking, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.			

p2722[0...n]		Load gear position tracking tolerance window / Pos track tol		
VECTOR_G	Can be changed: C2(1, 4) Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00	Calculated: - Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 4294967300.00	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00	
Description:	Sets a tolerance window for position tracking. After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated: Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value. Difference outside the tolerance window --> An appropriate message is output.			
Dependency:	Refer to: F07449			

Caution: Rotation, for example through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.
For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.
Example:

$$\text{Quarter of the encoder range} = (p0408 * p0421) / 4$$

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n]	CO: Load gear absolute value / Load gear abs_val		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: 4010, 4704
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the absolute value after the load gear.		
Notice:	The encoder position actual value must be requested using the encoder control word Gn_STW.13.		
Note:	The increments are displayed in the format the same as r0483.		

r2724[0...n]	CO: Load gear position difference / Load gear pos diff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position difference before the load gear between switching off and switching on.		
Note:	The increments are displayed in the same format as for r0483/r2723. If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments. If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.		

p2810[0...1]	BI: AND logic operation inputs / AND inputs		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2

VECTOR_G

Can be changed: T**Calculated:** CALC_MOD_ALL**Access level:** 3**Data type:** Unsigned32**Dyn. index:** -**Func. diagram:** -**P-Group:** Motor identification**Unit group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**

-

-

0000 bin

Description:

Sets the configuration for the characteristic measurement.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Continue last measurement	Yes	No	-
01	Insert cooling down time during the Iq stages	Yes	No	-
02	Deactivate speed check	Yes	No	-
03	Deactivate automatic parameter preassignment	Yes	No	-

Notice:

For bit 00:

- the function can only be activated if the measurement has still not been activated (p2911 = 0).

- the limit values for the measurement are loaded from the file. This means that the settings in p2920, p2921 and p2922 are not active.

Note:

For bit 00:

- the last measurement of the magnetic characteristics in the d and q axes (p2910 = 1) is continued at that position up until where the data were saved (in the file).

- to record the measurement again, the measurement with the highest index is used (data.txt or data_xx.txt, xx = [1...99]).

For bit 01:

- after each measured value of the quadrature axis, the current setpoint is ramped to 0, and the system waits for the time defined in p2925[1].

For bit 03:

- the automated pre-assignment of the current controller and time parameters is deactivated (p1715, p1720, p1722, p1710, p1711, p1712, p2924, p0045).

0

4

0

Description:

Activating characteristic measurement.

Value:

0: Deactivated
 1: Activated with transfer
 3: Activated with acceptance and conversion
 4: Activated without acceptance

2 Parameters

2.2 List of parameters

Dependency: For p2910 = 1:
- the measurement can only be activated if the pulses are not enabled.
- with this setting, only a value of 4 is possible.
- for each measurement, a new file is generated with consecutive number.
- for p2909.0 = 1, as a start point, the last value saved in the file with the highest index is used, and the following values are attached to the existing file.
- the parameter cannot be changed if p0096 is not 0.
Refer to: r2928

Note: The characteristic measurement progress is indicated in r2928.

p2920[0...1] Characteristic measurement lower limit / Lower char limit

VECTOR_G **Can be changed:** U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dyn. index:** - **Func. diagram:** -
P-Group: - **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min **Max** **Factory setting**
-500.00 [%] 500.00 [%] -100.00 [%]

Description: Lower limit for measuring the characteristics.
Index: [0] = First coordinate
 [1] = Second coordinate

Dependency: For p2910 = 1:
- for p2909.0 = 1, the parameter value is not taken into account .
- the value is used as setpoint for the lower current limit in the direct and quadrature axes.

Notice: The value must be less than \leq p2921.

p2921[0...1] Characteristic measurement upper limit / Upper char limit

VECTOR_G **Can be changed:** U, T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dyn. index:** - **Func. diagram:** -
P-Group: - **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min **Max** **Factory setting**
-500.00 [%] 500.00 [%] 100.00 [%]

Description: Upper limit for measuring the characteristics.
Index: [0] = First coordinate
 [1] = Second coordinate

Dependency: p2910 = 1:
- if p2909.0 is set, then the parameter value is not taken into account .
- the value is used as setpoint for the lower current limit in the direct and quadrature axes.

Notice: Der value must be \geq p2920.

p2922[0...1] Characteristic measurement number of measurement points / Char meas pts qty

VECTOR_G **Can be changed:** U, T **Calculated:** - **Access level:** 3
Data type: Unsigned16 **Dyn. index:** - **Func. diagram:** -
P-Group: - **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min **Max** **Factory setting**
0 100 21

Description: Defines the number of measuring points in one coordinate direction. This defines the resolution of the measurement.
Uneven number of measuring points:
Resolution = $|p2921[x]-p2920[x]|/(p2922-1)$

Index: [0] = First coordinate
 [1] = Second coordinate

Dependency: For p2910 = 1:
- for p2909.0 = 1, the parameter value is not taken into account .

Notice:

- the value of 0 is not included for an even number of measuring points.
- values less than 2 are not permitted.

p2923[0...1]	Characteristic measurement ramp time / Char t_ramp		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3

	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-10000.00 [%]	10000.00 [%]	0.00 [%]
Description:	Sets the connector output for the characteristic measurement.		
Index:	[0] = First coordinate [1] = Second coordinate		
Dependency:	For p2910 = 1: - the connection is automatically established when making the measurement.		
Note:	The value can be used to interconnect a scaling function (e.g. scaling the main setpoint).		

p2927[0...1]	Characteristic measurement speed / Char n		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0 [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 150 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 60 [%] [1] 5 [%]
Description:	Speed value as a percentage at which point the characteristic is measured. Index 1 specifies the tolerance threshold.		
Index:	[0] = Measuring speed [1] = Speed tolerance		
r2928	Characteristic measurement progress display / Char progress		
VECTOR_G	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [%]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the progress as a percentage when measuring the characteristics. Characteristic measurement is activated using p2911.		
Dependency:	Refer to: p2911		
p2930[0...n]	CO: Fixed value M [Nm] / Fixed value M [Nm]		
VECTOR_G	Can be changed: U, T Data type: FloatingPoint32 P-Group: Setpoints Not for motor type: REL Min -100000.00 [Nm]	Calculated: - Dyn. index: DDS, p0180 Unit group: 7_1 Scaling: p2003 Max 100000.00 [Nm]	Access level: 3 Func. diagram: 1021 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Nm]
Description:	Setting and connector output for a fixed torque value.		
Dependency:	Refer to: p2900, p2901, r2902		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The value can, for example, be used to interconnect a supplementary torque.		
r2969[0...6]	Flux model value display / Psi_mod val displ		
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, PMSM, SESM, REL Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the values of the direct access flux model for the synchronous reluctance motor (RESM) for diagnostic purposes. Valid values are only displayed when the pulses are inhibited. For index [0]: Displays the entered direct axis current id in Arms.		

For index [1, 2, 3]:

Displays the saturation curves of the direct axis flux $\psi_{sd}(id, iq)$:

- r2969[1]: flux in V_{srms} with respect to the direct axis current for $i_q = 0$
- r2969[2]: flux in V_{srms} with respect to the direct axis current for $i_q = 0.5 * p2950$
- r2969[3]: flux in V_{srms} with respect to the direct axis current for $i_q = p2950$

For index [4, 5, 6]:

Displays the relative error of the current inversion $(id(\psi_{sd}, iq) - id) / p2950$:

- r2969[4]: error with respect to direct axis current for $i_q = 0$
- r2969[5]: error with respect to direct axis current for $i_q = 0.5 * p2950$
- r2969[6]: error with respect to direct axis current for $i_q = p2950$

Index:

[0] = d-current
 [1] = d-flux i_{q0}
 [2] = d-flux i_{q1}
 [3] = d-flux i_{q2}
 [4] = d-current error i_{q0}
 [5] = d-current error i_{q1}
 [6] = d-current error i_{q2}

Note:

RESM: reluctance synchronous motor (synchronous reluctance motor)

r3113.0...15	CO/BO: NAMUR message bit bar / NAMUR bit bar		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

Description: Display and BICO output for the status of the NAMUR message bit bar.
The faults and alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fault converter information electronics/software error	Yes	No	-
	01	Network fault	Yes	No	-
	02	DC link overvoltage	Yes	No	-
	03	Fault drive converter power electronics	Yes	No	-
	04	Drive converter overtemperature	Yes	No	-
	05	Ground fault	Yes	No	-
	06	Motor overload	Yes	No	-
	07	Bus error	Yes	No	-
	08	External safety-relevant shutdown	Yes	No	-
	09	Mot encoder fault	Yes	No	-
	10	Error communication internal	Yes	No	-
	11	Fault infeed	Yes	No	-
	15	Other faults	Yes	No	-

Note:

For bit 00:
Hardware or software malfunction was identified. Carry out a POWER ON of the component involved. If it occurs again, contact Technical Support.

For bit 01:
A line supply fault has occurred (phase failure, voltage level, ...). Check the line supply / fuses. Check the supply voltage. Check the wiring.

For bit 02:
The DC link voltage has assumed an inadmissibly high value. Check the dimensioning of the system (line supply, reactor, voltages). Check the infeed settings.

For bit 03:
An inadmissible operating state of the power electronics was identified (overcurrent, overtemperature, IGBT failure, ...). Check that the permissible load cycles are maintained. Check the ambient temperatures (fan).

For bit 04:
The temperature in the component has exceeded the highest permissible limit. Check the ambient temperature / control cabinet cooling.

For bit 05:
A ground fault / inter-phase short-circuit was detected in the power cables or in the motor windings. Check the power cables (connection). Check the motor.

For bit 06:
The motor was operated outside the permissible limits (temperature, current, torque, ...). Check the load cycles and limits that have been set. Check the ambient temperature / motor cooling.

For bit 07:
The communication to the higher-level control system (internal coupling, PROFIBUS, PROFINET, ...) is either faulted or interrupted. Check the state of the higher-level control system. Check the communication connection/wiring. Check the bus configuration / clock cycles.

For bit 08:
A safety operation monitoring function (Safety) has detected an error.

For bit 09:
When evaluating the encoder signals (track signals, zero marks, absolute values, ...) an illegal signal state was detected. Check the encoder / state of the encoder signals. Observe the maximum frequencies.

For bit 10:
The internal communication between the SINAMICS components is faulted or interrupted. Check the DRIVE-CLiQ wiring. Ensure an EMC-compliant design. Observe the maximum permissible quantity structure / clock cycles.

For bit 11:
The infeed is faulted or has failed. Check the infeed and the surroundings (line supply, filter, reactors, fuses, ...). Check the closed-loop infeed control.

For bit 15:
Group fault. Determine the precise cause of the fault using the commissioning tool.

r3114.9...11	CO/BO: Messages status word global / Msg ZSW global

2 Parameters

2.2 List of parameters

Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 1 --> PROFIdrive message class 7: ground fault/phase fault detected
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 0 --> PROFIdrive message class 8: motor overload
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 1 --> PROFIdrive message class 9: communication error to the higher-level control
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 0 --> PROFIdrive message class 10: safe monitoring channel has identified an error
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 1 --> PROFIdrive message class 11: incorrect position actual value/speed actual value or not available
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 12: internal (DRIVE-CLiQ) communication error
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

r3123[0...63]

Diagnostic attribute alarm / Diag_attr alarm

All objects

Can be changed: -	Calculated: -	Access level: 3
Data type: Unsigned32	Dyn. index: -	Func. diagram: 8065
P-Group: Messages	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	-

Description:

Displays the diagnostic attribute of the alarm which has occurred.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Hardware replacement recommended	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-
13	Maintenance required	Yes	No	-
14	Maintenance urgently required	Yes	No	-
15	Message has gone	Yes	No	-
16	PROFIdrive fault class bit 0	High	Low	-
17	PROFIdrive fault class bit 1	High	Low	-
18	PROFIdrive fault class bit 2	High	Low	-
19	PROFIdrive fault class bit 3	High	Low	-
20	PROFIdrive fault class bit 4	High	Low	-

Dependency:

Refer to: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3121

Note:

The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

The structure of the alarm buffer and the assignment of the indices is shown in r2122.

For bit 12, 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

For bits 20 ... 16:

Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 0 --> PROFIdrive message class 0: not assigned
 Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 1 --> PROFIdrive message class 1: hardware fault/software error
 Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 0 --> PROFIdrive message class 2: line fault
 Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 1 --> PROFIdrive message class 3: supply voltage fault
 Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 0 --> PROFIdrive message class 4: DC link fault
 Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 1 --> PROFIdrive message class 5: power electronics faulted
 Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 0 --> PROFIdrive message class 6: overtemperature electronic components
 Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 1 --> PROFIdrive message class 7: ground fault/phase fault detected
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 0 --> PROFIdrive message class 8: motor overload
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 1 --> PROFIdrive message class 9: communication error to the higher-level control

Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 0 --> PROFIdrive message class 10: safe monitoring channel has identified an error
 Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 1 --> PROFIdrive message class 11: incorrect position actual value/speed actual value or not available
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 12: internal (DRIVE-CLiQ) communication error
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence
 Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault
 Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

0000 0000 0000 0000 bin

Description:

Sets the suppression of r2139.3 "Fault present" for certain fault responses.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
08	Suppression of fault response ENCODER	ON	OFF	-
10	Suppression of fault response NONE	ON	OFF	-

Dependency:

Refer to: p0491, r2139

Note:

Depending on the suppression of a fault reaction in this parameter, r2139.1 "Acknowledgment required" is set when at least one fault occurs.

For bit 08:

The suppression is only effective if p0491 = 1.

p3201[0...n]	Excitation current outside the tolerance threshold value / I_exc n Tol thresh		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	100.0 [%]	10.0 [%]
Description:	Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring. If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output. This fault is withdrawn when the threshold voltage is undershot.		
Dependency:	Refer to: r1626, r1641, p3202, p3203 Refer to: F07913		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).		
p3202[0...n]	Excitation current outside the tolerance hysteresis / I_exc n Tol hyst		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	100.0 [%]	10.0 [%]
Description:	Sets the hysteresis for the "excitation current outside tolerance" message for the excitation current monitoring.		
Dependency:	Refer to: p3201, p3203 Refer to: F07913		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).		
p3203[0...n]	Excitation current outside the tolerance delay time / I_exc n Tol t_del		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	10.0 [s]	1.0 [s]
Description:	Sets the delay time for the "excitation current outside tolerance" message for the excitation current monitoring.		
Dependency:	Refer to: p3201, p3202 Refer to: F07913		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).		

p3204[0...n]	Flux outside the tolerance threshold value / Flux n tol thresh		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	100.0 [%]	10.0 [%]
Description:	Sets the threshold value for the "flux outside the tolerance" message for the flux monitoring. If the absolute value of the difference between the flux setpoint and actual value (r0083 - r0084) falls below the threshold value with hysteresis longer than the selected delay time, then fault F07914 is output. This fault is withdrawn when the threshold voltage is undershot.		
Dependency:	Refer to: r0083, r0084, p3205, p3206 Refer to: F07914		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The flux monitoring is only active after magnetizing (r0056.4 = 1).		
p3205[0...n]	Flux outside the tolerance hysteresis / Flux n tol hyst		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.1 [%]	50.0 [%]	10.0 [%]
Description:	Sets the hysteresis for the "flux outside tolerance" message for the flux monitoring.		
Dependency:	Refer to: p3204, p3206 Refer to: F07914		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The flux monitoring is only active after magnetizing (r0056.4 = 1).		
p3206[0...n]	Flux outside tolerance delay time / Flux n tol t_del		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	10.0 [s]	5.0 [s]
Description:	Sets the delay time for the "flux outside tolerance" message for the flux monitoring.		
Dependency:	Refer to: p3204, p3205 Refer to: F07914		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The flux monitoring is only active after magnetizing (r0056.4 = 1).		

2 Parameters

2.2 List of parameters

p3207[0...n]	Zero current signal threshold value / I_0_sig thresh		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min 0.01 [Arms]	Max 10000.00 [Arms]	Factory setting 1.00 [Arms]
Description:	Sets the threshold value for the zero current signal for the zero current monitoring. If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.		
Dependency:	Refer to: r2199, p3208, p3209		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).		
p3208[0...n]	Zero current signal hysteresis / I_0_sig hyst		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min 0.01 [Arms]	Max 10000.00 [Arms]	Factory setting 1.00 [Arms]
Description:	Sets the hysteresis for the zero current signal for the zero current monitoring.		
Dependency:	Refer to: p3207, p3209		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).		
p3209[0...n]	Zero current signal delay time / I_0_sig t_del		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min 0.00 [s]	Max 10.00 [s]	Factory setting 0.02 [s]
Description:	Sets the delay time for the zero current signal for the zero current monitoring.		
Dependency:	Refer to: p3207, p3208		
Note:	The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).		
p3233[0...n]	Torque actual value filter time constant / M_act_filt T		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0 [ms]	Max 1000000 [ms]	Factory setting 0 [ms]
Description:	Sets the time constant for the PT1 element to smooth the torque actual value. The smoothed torque actual value is compared with the threshold values and is only used for messages and signals.		

p3235	Phase failure signal motor monitoring time / Ph_fail t_monit		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	2000 [ms]	320 [ms]
Description:	Sets the monitoring time for phase failure detection of the motor.		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	Monitoring is only effective for blocksize and booksize power units. For p3235 = 0 the function is deactivated. For VECTOR, the following applies: The monitoring is automatically deactivated during a flying restart for a motor that is still rotating.		
p3236[0...n]	Speed threshold value 7 / n_thresh val 7		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	3000.00 [rpm]	100.00 [rpm]
Description:	Sets the speed threshold value for the signal "speed deviation model/external in tolerance" (BO: r2199.7).		
Dependency:	Refer to: r1443, r2169, r2199, p3237		
p3237[0...n]	Hysteresis speed 7 / n_hysteresis 7		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: 3_1	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [rpm]	200.00 [rpm]	2.00 [rpm]
Description:	Sets the hysteresis speed for the signal "speed deviation model/external" (BO: r2199.7).		
Dependency:	Refer to: r2199, p3236		
p3238[0...n]	OFF delay n_act_motor model = n_act external / t_del n_a = n_ext		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8012
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.0 [s]	100.0 [s]	3.0 [s]
Description:	Sets the OFF delay for the signal "speed deviation model/external in tolerance" (BO: r2199.7). The smoothed actual speed of the motor model r2169 is compared with the externally measured speed r1443 (threshold value p3236).		
Dependency:	Refer to: p3236, p3237		

p3240[0...n]	CI: I2t input value signal source / I2t in_value s_src		
VECTOR_G (Ext msg)	Can be changed: T	Calculated: -	Access level: 4
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 8022
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the input value of the freely parameterizable I2t monitoring.		
Dependency:	Refer to: p3241, p3242, p3243, r3244 Refer to: A07823, F07824		
Notice:	To activate the freely parameterizable I2t monitoring, the following applies: - the function module "Extended messages/monitoring" must be activated (r0108.17 = 1). - the maximum duration must be set greater than zero (p3242 > 0).		
Note:	Application example: Excitation current monitoring for the separately excited synchronous motor.		

p3241[0...n]	Permissible I2t continuous value / Perm I2t cont val		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8022
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.00 [%]	200.00 [%]	100.00 [%]
Description:	Sets the permissible continuous value of the freely parameterizable I2t monitoring. The integrator value in r3244 decreases if the value received via connector input p3240 is higher than the value set in p3241. The integrator value in r3244 increases if the value received via connector input p3240 is less than the value set in p3241.		
Dependency:	Refer to: p3240, p3242, p3243, r3244 Refer to: A07823, F07824		

p3242[0...n]	I2t maximum duration / I2t max_dur		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8022
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [s]	3600.00 [s]	0.00 [s]
Description:	Sets the maximum duration for 100 % overload (corresponding to p3241 + 100 %) of the freely parameterizable I2t monitoring. Setting example: Operation should be possible at 150 % of the input quantity for a duration of 3 s for a permissible continuous value p3241 = 110 %. As a consequence, the following settings value is obtained: $p3242 = ((150 \times 150 - 110 \times 110) / ((100 + 110) \times (100 + 110) - 110 \times 110)) \times 3 \text{ s} = 0.975 \text{ s}$		
Dependency:	Refer to: p3240, p3241, p3243, r3244 Refer to: A07823, F07824		
Notice:	For p3242 = 0, the freely parameterizable I2t monitoring is deactivated.		
Note:	After this time expires for 100 % overload, fault F07824 is output and status bit r2199.14 is set. For lower overload conditions, the permissible duration extends corresponding to the specified setting example.		

p3243[0...n]	I2t alarm threshold / I2t alarm thresh		
VECTOR_G (Ext msg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 8022
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	99.90 [%]	50.00 [%]
Description:	Sets the alarm threshold for the I2t integrator value (r3244) scaled to 100 %.		
	When the alarm threshold is reached, alarm A07823 is output and status bit r2199.13 is set.		
Dependency:	Refer to: p3240, p3241, p3242, r3244		
	Refer to: A07823		
r3244	CO: Actual I2t integrator value / Act I2t integ_val		
VECTOR_G (Ext msg)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 8022
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: ASM, PMSM, REL, RESM	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Display and connector output for the actual integrator value of the freely parameterizable I2t monitoring.		
	The value is scaled, so that the maximum permissible overload is reached at 100 %.		
Dependency:	Refer to: p3240, p3241, p3242, p3243		
r3313	Efficiency optimization 2 optimum flux / Optimum flux		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 6722, 6837
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: r2004	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the calculated, optimum flux.		
Dependency:	Refer to: p1401, p3315, p3316		
Note:	The function is activated via p1401.14 = 1.		
p3315[0...n]	Efficiency optimization 2 minimum flux limit value / Min flux lim val		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722, 6837
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	200.0 [%]	50.0 [%]
Description:	Sets the minimal limit value for the calculated optimum flux.		
Dependency:	Refer to: p1401, r3313, p3316		
Note:	The function is activated via p1401.14 = 1.		

p3316[0...n]	Efficiency optimization 2 maximum flux limit value / Max flux lim val		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 6722, 6837
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.0 [%]	200.0 [%]	110.0 [%]
Description:	Sets the maximum limit value for the calculated optimum flux.		
Dependency:	Refer to: p1401, r3313, p3315		
Note:	The function is activated via p1401.14 = 1.		
p3320[0...n]	Fluid flow machine power point 1 / Fluid_mach P1		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	25.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the power (P) of point 1 as a [%]. The characteristic comprises the following value pairs: Power (P) / speed (n) p3320 / p3321 --> point 1 (P1 / n1) p3322 / p3323 --> point 2 (P2 / n2) p3324 / p3325 --> point 3 (P3 / n3) p3326 / p3327 --> point 4 (P4 / n4) p3328 / p3329 --> point 5 (P5 / n5)		
Dependency:	Refer to: r0041, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		
p3321[0...n]	Fluid flow machine speed point 1 / Fluid_mach n1		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	0.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the speed (n) of point 1 as a [%]. The characteristic comprises the following value pairs: Power (P) / speed (n) p3320 / p3321 --> point 1 (P1 / n1) p3322 / p3323 --> point 2 (P2 / n2) p3324 / p3325 --> point 3 (P3 / n3) p3326 / p3327 --> point 4 (P4 / n4) p3328 / p3329 --> point 5 (P5 / n5)		
Dependency:	Refer to: r0041, p3320, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		

p3322[0...n]	Fluid flow machine power point 2 / Fluid_mach P2		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	50.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the power (P) of point 2 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3323, p3324, p3325, p3326, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		
p3323[0...n]	Fluid flow machine speed point 2 / Fluid_mach n2		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	25.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the speed (n) of point 2 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3324, p3325, p3326, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		
p3324[0...n]	Fluid flow machine power point 3 / Fluid_mach P3		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	77.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the power (P) of point 3 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3323, p3325, p3326, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		
p3325[0...n]	Fluid flow machine speed point 3 / Fluid_mach n3		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	50.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the speed (n) of point 3 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3323, p3324, p3326, p3327, p3328, p3329		

2 Parameters

2.2 List of parameters

Note: The reference value for power and speed is the rated power/rated speed.
The energy saved is displayed in r0041.

p3326[0...n]	Fluid flow machine power point 4 / Fluid_mach P4		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	92.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the power (P) of point 4 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3323, p3324, p3325, p3327, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		

p3327[0...n]	Fluid flow machine speed point 4 / Fluid_mach n4		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	75.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the speed (n) of point 4 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3323, p3324, p3325, p3326, p3328, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		

p3328[0...n]	Fluid flow machine power point 5 / Fluid_mach P5		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	100.00	100.00
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the power (P) of point 5 as a [%].		
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3329		
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.		

p3329[0...n]	Fluid flow machine speed point 5 / Fluid_mach n5			
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00	100.00	100.00	
Description:	For the energy-saving display of a fluid-flow machine, a typical flow characteristic $P = f(n)$ with 5 points along the characteristic is required. This parameter specifies the speed (n) of point 5 as a [%].			
Dependency:	Refer to: r0041, p3320, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328			
Note:	The reference value for power and speed is the rated power/rated speed. The energy saved is displayed in r0041.			
p3370[0...n]	Pulse technique configuration / Pulse config			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4	
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Select possible pulse technique configurations.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Select pulse techniques excitation adaptation	Yes	No
	01	Select pulse techniques offset correction	Yes	No
	02	Offset correction only close to no-load operation	Yes	No
Dependency:	Refer to: p3371, p3372, p3373			
p3371[0...n]	Pulse technique excitation starting point 1 / Pulse excit pt 1			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]	
Description:	Sets application point 1 for the load current-dependent adapted value of the excitation amplitude of the pulse technique.			
Dependency:	Refer to: p1607, p3372, p3373			
Note:	The active excitation amplitude at application point 1 is specified by the setting value p1607.			
p3372[0...n]	Pulse technique excitation starting point 2 / Pulse excit pt 2			
VECTOR_G (n/M)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]	
Description:	Sets application point 2 for the load current-dependent adapted value of the excitation amplitude of the pulse technique.			
Dependency:	Refer to: p1607, p3371, p3373			
Note:	The active excitation amplitude at application point 2 is specified by the setting value (p3373 * p1607).			

p3373[0...n] Pulse technique excitation adaptation / Pulse excit scale			
VECTOR_G (n/M)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: ASM, SESM, REL Min 0 [%]	Calculated: CALC_MOD_CON Dyn. index: DDS, p0180 Unit group: - Scaling: - Max 1000 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100 [%]
Description:	Sets the adaptation value at application point 2 of the load current-dependent adapted excitation amplitude of the pulse technique.		
Dependency:	Refer to: p1607, p3371, p3372		
Note:	The active excitation amplitude at application point 2 is (p3373 * p1607).		
r3374 CO: Pulse technique excitation actual / Pulse excit actual			
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: ASM, SESM, REL Min - [mVs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max - [mVs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [mVs]
Description:	Display and connector output for the currently active excitation amplitude of the pulse technique.		
Dependency:	Refer to: p1605, p1607, p1750, p3371, p3372, p3373		
r3375[0...5] CO: Pulse technique response raw values / PulsTec res RawVal			
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: ASM, SESM, REL Min - [A]	Calculated: - Dyn. index: - Unit group: 6_5 Scaling: p2002 Max - [A]	Access level: 4 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the signal response raw values to the excitation of the pulse technique.		
Index:	[0] = Phase R [1] = Phase S [2] = alpha [3] = beta [4] = alpha changed [5] = beta changed		
Dependency:	Refer to: p1605, p1607, p1750		
r3376[0...2] Pulse technique model parameters / Pulse model			
VECTOR_G (n/M)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: ASM, SESM, REL Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the parameters of the pulse model. Pulse reluctances are displayed in the unit [A / Vs].		
Index:	[0] = Pulse reluctance total [1] = Pulse reluctance difference [2] = Pulse reluctance cross		

r3377[0...2]	Pulse technique signals / Pulse signals			
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 4	
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays signals of the pulse technique.			
Index:	[0] = Offset correction correction component [1] = Level relationship A priority [2] = Anisotropy factor			
r3402	Infeed status internal BIC / INF state int			
B_INF	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Integer16	Dyn. index: -	Func. diagram: 8932	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	6	-	
Description:	Displays the internal status of the infeed module.			
Value:	0: Initialization 1: Fault 2: No ON command 3: Offset measurement running 4: ON delay active 5: Precharging running 6: Operation			
r3405.1...8	CO/BO: Status word DC link control / ZSW Vdc_ctrl			
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Display and BICO output for the status word of the DC link voltage control.			
Bit field:	Bit	Signal name	1 signal	0 signal
	01	Vdc controller active	Yes	No
	08	Vdc controller selected	Yes	No
Dependency:	Refer to: A06810			
Note:	For bit 01: DC link voltage control is disabled and enabled with p3513. For bit 08 = 1: DC link voltage control is selected using p3513.			

r3405.7		CO/BO: Infeed status word / Inf ZSW												
B_INF	Can be changed: - Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -											
Description:	Display and BICO output for the status word of the infeed unit.													
Bit field:	<table border="1"> <thead> <tr> <th>Bit</th> <th>Signal name</th> <th>1 signal</th> <th>0 signal</th> <th>FP</th> </tr> </thead> <tbody> <tr> <td>07</td> <td>DC link undervoltage alarm threshold undershot</td> <td>Yes</td> <td>No</td> <td>-</td> </tr> </tbody> </table>	Bit	Signal name	1 signal	0 signal	FP	07	DC link undervoltage alarm threshold undershot	Yes	No	-			
Bit	Signal name	1 signal	0 signal	FP										
07	DC link undervoltage alarm threshold undershot	Yes	No	-										
Dependency:	Refer to: A06810													
Note:	For bit 07: When the alarm threshold is fallen below, alarm A06810 is output and r3405.7 is set = 1. The alarm threshold is obtained from the sum of the undervoltage threshold r0296 and offset p0279. As a consequence, the alarm threshold is only effective for p0279 > 0. Monitoring only takes place when operational. The following applies for states r3402 <= 5 and r3402 = 12: r3405.7 = 0.													
p3422		DC link capacitance total / C_DC tot												
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.20 [mF]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 2000.00 [mF]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2.00 [mF]											
Description:	Sets the total DC link capacitance for closed-loop voltage control. The capacitance of one power unit is pre-assigned to this value. The value should be adapted according to the number of power units.													
Note:	The controller setting for the DC link voltage controller is derived from this value.													
p3490		Infeed delay time OFF1 command / INF t_del OFF1												
B_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [ms]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1000000.0 [ms]	Access level: 2 Func. diagram: 8732, 8832, 8932 Unit selection: - Expert list: 1 Factory setting 0.0 [ms]											
Description:	Sets the delay time for the ON/OFF1 command of the infeed. After ON/OFF1 = 0 the infeed remains in operation for the specified time													
Dependency:	Refer to: p0840													
Notice:	The ON/OFF1 command of the infeed can be interrupted.													
Note:	This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.													

p3510	DC link voltage setpoint / Vdc setp		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 100.00 [V]	Calculated: - Dyn. index: - Unit group: 5_2 Scaling: p2001 Max 1600.00 [V]	Access level: 2 Func. diagram: 7960 Unit selection: p0505 Expert list: 1 Factory setting 600.00 [V]
Description:	Sets the setpoint for the DC link voltage on the motor side.		
p3511	CI: DC link voltage supplementary setpoint / Vdc Z_set		
VECTOR_G (Tech_ctrl)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: p2001 Max -	Access level: 3 Func. diagram: 7960 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the supplementary setpoint for the DC link voltage on the motor side.		
Dependency:	Refer to: p3510		
p3513	BI: Voltage-controlled operation inhibit / U_ctrl op inhib		
VECTOR_G (Tech_ctrl)	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: 7960 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source for disabling DC link voltage control on the motor side.		
r3517	CO: DC link controller active current setpoint / Vdc I_act set		
VECTOR_G (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Arms]	Calculated: - Dyn. index: - Unit group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 3 Func. diagram: 6220, 7960 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Display and connector output for the unlimited setpoint of the active current controller of the DC link voltage control on the motor side.		
p3519[0...3]	CI: DC link precontrol power (scaled) / Vdc prectrl P scal		
VECTOR_G (Tech_ctrl)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: r2004 Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for power precontrol.		
Dependency:	Refer to: p3521		
Note:	Closed-loop control of the DC link voltage is improved by precontrolling the power required for the other components. A scaled quantity is expected so that the various power reference values (r2004) of the drive objects must be taken into account. The scaling factors are used to adapt the scaling (p3521).		

2 Parameters

2.2 List of parameters

p3520[0...3]	CI: DC link precontrol power (not scaled) / Vdc prectrl P		
VECTOR_G (Tech_ctrl)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: -	Func. diagram: 7960
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for power precontrol.		
Dependency:	Refer to: p3521		
Note:	Closed-loop control of the DC link voltage is improved by precontrolling the power required for the other modules. A non-scaled quantity is expected so that the various power reference values (r2004) of the drive objects do not have to be taken into account. The scaling factors are used to adapt the scaling (p3521).		
p3521[0...3]	DC link precontrol power scaling / Vdc prectrl P scal		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7960
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-100000.00000 [%]	100000.00000 [%]	100.00000 [%]
Description:	Sets the scaling factor for the power precontrol.		
Dependency:	Refer to: p3520		
Note:	The scaling factor acts on the sum of the associated indices of p3519 and p3520. As one BICO input is scaled (p3519) and the other is not scaled (p3520), for each index, only one of the two inputs should ever be assigned.		
r3522[0...4]	CO: DC link voltage control precontrol display / Vdc_ctr prectr dis		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7960
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kW]	- [kW]	- [kW]
Description:	Display and connector output for the smoothed power precontrols.		
Index:	[0] = Power precontrol 1 [1] = Power precontrol 2 [2] = Power precontrol 3 [3] = Power precontrol 4 [4] = Power precontrol sum linearized		
Dependency:	Refer to: p3520, p3521, p3523		
Note:	These displays are used to set the correct scaling for the precontrol.		
p3523[0...3]	DC link precontrol power smoothing / Vdc prectrl P sm		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	1000 [ms]	0 [ms]
Description:	Sets the filter time for power precontrol.		
Dependency:	Refer to: p3520		

r3554[0...1]	Vdc controller output / INF Vdc_ctrl outp		
VECTOR_G (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7960
	P-Group: Closed-loop control	Unit group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [Arms]	- [Arms]	- [Arms]
Description:	Displays the DC link voltage controller output (Vdc controller).		
Index:	[0] = I output [1] = PI output		
p3560	Vdc controller proportional gain / Vdc_ctrl Kp		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7960
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.01 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the scaled proportional gain for the DC link voltage controller (Vdc controller).		
Note:	A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).		
p3562	Vdc controller integral time / Vdc_ctrl Tn		
VECTOR_G (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7960
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.10 [%]	100000.00 [%]	100.00 [%]
Description:	Sets the scaled integral time for the DC link voltage controller (Vdc).		
Note:	A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).		
p3660[0...n]	VSM input line supply voltage voltage scaler / VSM inp U_scaler		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100000.00 [%]	0.00 [%]
Description:	Sets the voltage scaler for the Voltage Sensing Module (VSM).		
Note:	When the 690 V input is used (X522) without voltage scaler, 0 % should be entered. When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered. Example: 1000 V line supply voltage, voltage scaling, 10:1 --> voltage at the VSM input is 100 V --> p3660 = 10 * 100 % = 1000 %		

2 Parameters

2.2 List of parameters

r3661[0...n]	CO: VSM input line supply voltage u1 - u2 / VSM inp u1-u2			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: 5_3	Unit selection: p0505	
	Not for motor type: -	Scaling: p2001	Expert list: 1	
	Min	Max	Factory setting	
	- [V]	- [V]	- [V]	
Description:	Displays the input voltage between phases L1 and L2 for the Voltage Sensing Module (VSM).			
Dependency:	Refer to: p3660			
Note:	X521.1 or X522.1: Connection of L1 X521.2 or X522.2: Connection of L2 X521.3 or X522.3: Connection of L3			
r3662[0...n]	CO: VSM input line supply voltage u2 - u3 / VSM inp u2-u3			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: -	
	P-Group: Closed-loop control	Unit group: 5_3	Unit selection: p0505	
	Not for motor type: -	Scaling: p2001	Expert list: 1	
	Min	Max	Factory setting	
	- [V]	- [V]	- [V]	
Description:	Displays the input voltage between phases L2 and L3 for the Voltage Sensing Module (VSM).			
Dependency:	Refer to: p3660			
Note:	X521.1 or X522.1: Connection of L1 X521.2 or X522.2: Connection of L2 X521.3 or X522.3: Connection of L3			
r3664[0...n]	CO: VSM temperature evaluation status / VSM temp status			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: p0150	Func. diagram: 9886	
	P-Group: Terminals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the status of the temperature evaluation using the Voltage Sensing Module (VSM). This displays whether the temperature actual value has exceeded the alarm/fault threshold.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Alarm is present	Yes	No
	01	Fault is present	Yes	No
				FP
				-
				-
Dependency:	Refer to: p3665, r3666, p3667, p3668			
p3665[0...n]	VSM temperature evaluation sensor type / VSM TempSensorType			
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: p0150	Func. diagram: 9886	
	P-Group: Closed-loop control	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	6	0	
Description:	Sets the temperature sensor for the Voltage Sensing Module (VSM). The temperature sensor is connected to terminals X520.5 and X520.6 of the VSM.			
Value:	0:	No sensor		
	1:	PTC		
	2:	KTY84		
	6:	PT1000		

r3666[0...n]	CO: VSM temperature actual value / VSM Temp_ActVal		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9886
	P-Group: Closed-loop control	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Display and connector output for the temperature actual value of a temperature sensor connected to a Voltage Sensing Module (VSM). Prerequisite: A KTY/ PT1000 temperature sensor is connected, and correspondingly 3665 is set = 2, 6.		
Dependency:	Refer to: p3665 Refer to: F34207, A34211		
Note:	If value r3666 exceeds threshold value p3667 or p3668, then alarm A34211 or fault F34207 is output. For sensor type PTC (p3665 = 1), the following applies: - below the nominal response temperature, r3666 = -50 °C. - above the nominal response temperature, r3666 = 250 °C.		

p3667[0...n]	VSM overtemperature alarm threshold / VSM T A thresh		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9886
	P-Group: -	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-100.00 [°C]	301.00 [°C]	150.00 [°C]
Description:	Sets the alarm threshold for the temperature sensor on the Voltage Sensing Module (VSM). Prerequisite: A KTY/PT1000 temperature sensor is connected, and correspondingly p3665 is set = 2, 6.		
Dependency:	Refer to: p3665 Refer to: A34211		
Note:	For sensor type KTY (p3665 = 2) or PT1000 (p3665 = 6), values 181 ... 300 °C result in fault F06255. The monitoring is deactivated for p3667 = 301.		

p3668[0...n]	VSM overtemperature shutdown threshold / VSM T F_thresh		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9886
	P-Group: -	Unit group: 21_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	-100.00 [°C]	301.00 [°C]	180.00 [°C]
Description:	Sets the shutdown threshold for the temperature sensor of the VSM. Prerequisite: A KTY/PT1000 temperature sensor is connected, and correspondingly p3665 is set = 2, 6.		
Dependency:	Refer to: p3665, p3667 Refer to: F35207		
Note:	For sensor type KTY (p3665 = 2), values 181 ... 300 °C result in fault F06255. The monitoring is deactivated for p3668 = 301.		

p3669[0...n]	VSM overtemperature hysteresis / VSM T hyst		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9886
	P-Group: -	Unit group: 21_2	Unit selection: p0505
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	1.00 [K]	50.00 [K]	3.00 [K]
Description:	Sets the hysteresis for the alarm threshold/fault threshold of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3667		
p3670[0...n]	VSM 10 V input CT gain / VSM CT_gain		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	0.000 [A]	1000.000 [A]	1.000 [A]
Description:	Sets CT gain of the CT connected at the 10 V input of the Voltage Sensing Module (VSM). The parameter specifies the current magnitude in [A] referred to the input voltage at the VSM in [V]. Example: CT with 1 V per 200 A. --> p3670 = 200		
Dependency:	Refer to: r3671, r3672		
Note:	The CT for phase 1 is connected at terminals X520.1 and X520.2 of the VSM. The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.		
r3671[0...n]	CO: VSM 10 V input CT 1 actual value / VSM CT 1 I_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the current actual value from current transducer (CT) 1 at the 10 V input of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3670		
Note:	The CT for phase 1 is connected at terminals X520.1 and X520.2 of the VSM.		
r3672[0...n]	CO: VSM 10 V input CT 2 actual value / VSM CT 2 I_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the current actual value from current transducer (CT) 2 at the 10 V input of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3670		
Note:	The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.		

r3673[0...n]	CO: VSM 10 V input 1 actual value / VSM inp 1 U_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 1 of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3670		
Note:	10 V input 1: Terminals X520.1 and X520.2		

r3674[0...n]	CO: VSM 10 V input 2 actual value / VSM inp 2 U_act		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: p0150	Func. diagram: 9880
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Module (VSM).		
Dependency:	Refer to: p3670		
Note:	10 V input 2: Terminals X520.3 and X520.4		

p3680	BI: Braking Module internal inhibit / BM int inhib		
B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to inhibit the internal Braking Module. BI: p3680 = 1 signal: The Braking Module is inhibited. BI: p3680 = 0 signal: The Braking Module is enabled.		
Dependency:	Refer to: A06904		
Caution:	When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.		

p3681	BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act		
B_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to activate the DC link fast discharge for an internal braking module. When the following conditions apply, the DC link fast discharge is started later with delay time (p3682): - BI: p3681 = 1 signal. - an external line contactor is opened via r0863.1 "energize contactor". The DC link fast discharge is interrupted when the following conditions apply: - BI: p3681 = 0 signal. - ON command for the infeed.		

2 Parameters

2.2 List of parameters

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: Refer to: p3682
Refer to: F30027

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3682 Braking Module internal DC link fast discharge delay time / BM int DC dischg t

B_INF	Can be changed: C1(3), T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge for an internal Braking Module.

Dependency: Refer to: p3681

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3683 Braking Module internal activation threshold brake chopper / BM int act thresh

B_INF	Can be changed: C2(1, 2)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	110.00 [V]	780.00 [V]	760.00 [V]

Description: Sets the activation threshold for the braking chopper.

Note: The activation threshold is only effective if the "Device supply voltage reduced" function (p0212.0 = 1) has been activated!

r3685 BO: Digital Braking Module: Pre-alarm I2t shutdown / Dig BM A I2t shutd

B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: The binector output uses a 1 signal to indicate that 80 % of the highest permissible I2t value has been reached in the Braking Module.

Dependency: Refer to: A06905

r3686 BO: Digital Braking Module fault / Dig BM fault

B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: The binector output uses a 1 signal to indicate an overcurrent fault or an I2t shutdown in the Braking Module.

Dependency: Refer to: F06906

r3687	BO: Digital Braking Module pre-alarm overtemperature / Dig BM A overtemp		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays a fault due to the excessively high temperature. 1 signal: The connected temperature sensor (X21.1, X21.2) signals an overtemperature.		
Recommendation:	Measure the braking resistor temperature using the temperature sensor.		
r3688	BO: Braking Module internal overtemperature shutdown / BM int temp shudt		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the shutdown due to the excessively high temperature. 1 signal: The connected temperature sensor (X21.1, X21.2) signals an overtemperature. The highest permissible temperature at the connected temperature sensor has been exceeded and results in a shutdown.		
Dependency:	Refer to: F06908		
r3689	BO: Digital Braking Module Uce fault / Dig BM Uce fault		
B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays an Uce fault in the internal Braking Module. 1 signal: An Uce fault is present in the internal Braking Module.		
Dependency:	Refer to: F06909		
p3800[0...n]	Sync-line-drive activation / Sync act		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the activation for line-drive synchronization		
Value:	0: Sync-line-drive deactivated 1: Sync-line-drive activated VSM-INT		
Dependency:	Refer to: p3801, p3802		
Caution:	If there is only one VSM being used, this can either be used for line synchronization or for a flying restart. If the VSM was connected to the line supply, then flying restart should be deselected in p1200. If the VSM was connected at the output (motor side), then line synchronization should be deactivated using p3800. Line synchronization (first VSM connected with the line supply) and also flying restart (second VSM connected to the motor terminals) can only be used if two VSMs are assigned to the Motor Module.		
			

2 Parameters

2.2 List of parameters

Note: When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %).
For p3800 = 1, the following applies:
The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230.
VSM: Voltage Sensing Module

p3801[0...n]	Sync-line-drive drive object number / Sync DO_no		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	62	1
Description:	Sets the drive object number of the drive whose VSM is used for line-drive synchronization.		
Dependency:	Refer to: p3800, p3802		
Notice:	The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.		
Note:	VSM: Voltage Sensing Module The setting p3801 = 1 is always possible (no VSM selected). If the VSM is assigned subsequently to a Motor Module, its drive object number must be entered in p3801. The line voltage is always measured using the first VSM (p0151[0]).		

p3802[0...n]	BI: Sync-line-drive enable / Sync enable		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned32 / Binary	Dyn. index: CDS, p0170	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to switch in/switch out for the line-drive synchronization. BI: p3802 = 1 signal: The line-drive synchronization is switched in.		
Dependency:	Refer to: p3800, p3801		

r3803.0	CO/BO: Sync-line-drive control word / Sync STW			
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Functions	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the control word for the line-drive synchronization.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Sync-line-drive selected	Yes	No
Note:	For bit 00: For a 1 signal, p3800 > 0 is set.			
			FP	-

r3804	CO: Sync-line-drive target frequency / Sync f_target		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3030, 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the target frequency for the line-drive synchronization. The target frequency corresponds to the absolute value of the line frequency.		
Dependency:	Refer to: A07941		
r3805	CO: Sync-line-drive frequency difference / Sync f_diff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the frequency difference between the measured target frequency and output frequency of the gating unit of the closed-loop control for line-drive synchronization.		
p3806[0...n]	Sync-line-drive frequency difference threshold value / Sync f_diff thresh		
VECTOR_G	Can be changed: U, T	Calculated:	Access level: 2
		CALC_MOD_LIM_REF	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	1.00 [Hz]	0.10 [Hz]
Description:	Sets the threshold value of the frequency difference to activate the closed-loop phase control for line-drive synchronization. The closed-loop phase control is activated (r3819.6 = 1), if the frequency difference is less that the threshold value.		
r3808	CO: Sync-line-drive phase difference / Sync phase diff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2005	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the phase difference between the measured target phase and phase of the gating unit of the closed-loop control for line-drive synchronization.		
p3809[0...n]	Sync-line-drive phase setpoint / Sync phase setp		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-180.00 [°]	179.90 [°]	0.00 [°]
Description:	Sets the phase setpoint for the line-drive synchronization.		

2 Parameters

2.2 List of parameters

p3811[0...n]	Sync-line-drive frequency limiting / Sync f_lim		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [Hz]	1.00 [Hz]	0.20 [Hz]
Description:	Sets the frequency limiting of the phase controller output for the line-drive synchronization.		
r3812	CO: Sync-line-drive correction frequency / Sync f_corr		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 3080, 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	- [Hz]	- [Hz]	- [Hz]
Description:	Displays the correction frequency for the line-drive synchronization.		
p3813[0...n]	Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.00 [°]	20.00 [°]	2.00 [°]
Description:	Sets the threshold value of the phase synchronism for the line-drive synchronization. A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.		
Note:	Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.		
r3814	CO: Sync-line-drive voltage difference / Sync U_diff		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Display and connector output for the voltage difference between the measured target voltage and output voltage of the gating unit of the closed-loop control for line-drive synchronization.		
p3815[0...n]	Sync-line-drive voltage difference threshold value / Sync U_diff thresh		
VECTOR_G	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7020
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	20.00 [%]	10.00 [%]
Description:	Sets the threshold value of the voltage difference for the line-drive synchronization. A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.		

Note: Synchronism is reached ($r3819.2 = 1$), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.
For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.
The parameter is referred to the voltage setpoint amplitude.

p3818[0...n]	Sync-line-drive synchronization time limit / Sync time lim		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [s]	900 [s]	60 [s]
Description:	Sets the time limit for achieving line-drive synchronism.		
Dependency:	Refer to: F07940		
Note:	For p3818 = 0, the time limit is deactivated.		

r3819.0...7	CO/BO: Sync-line-drive status word / Sync ZSW				
VECTOR_G	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 7020		
	P-Group: Functions	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word for the line-drive synchronization.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Sync-line-drive enabled	Yes	No	-
	02	Sync-line-drive synchronism reached	Yes	No	-
	03	Sync-line-drive synchronizing error	Yes	No	-
	05	Sync-line-drive frequency measurement active	Yes	No	-
	06	Sync-line-drive phase control active	Yes	No	-
	07	Synchronize without drive	Yes	No	-

p3820[0...n]	Friction characteristic value n0 / Friction n0		
VECTOR_G (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2

	Min	Max	Factory setting		
	-1000000.0000 [Nm]	1000000.0000 [Nm]	0.0000 [Nm]		
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the M coordinate of the 8th value pair of the friction characteristic.				
Dependency:	Refer to: p3827, p3845				
p3838[0...n]	Friction characteristic value M8 / Friction M8				
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2		
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010		
	P-Group: Functions	Unit group: 7_1	Unit selection: p0505		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-1000000.0000 [Nm]	1000000.0000 [Nm]	0.0000 [Nm]		
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the M coordinate of the 9th value pair of the friction characteristic.				
Dependency:	Refer to: p3828, p3845				
p3839[0...n]	Friction characteristic value M9 / Friction M9				
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2		
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010		
	P-Group: Functions	Unit group: 7_1	Unit selection: p0505		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-1000000.0000 [Nm]	1000000.0000 [Nm]	0.0000 [Nm]		
Description:	The friction characteristic is defined by 10 value pairs. This parameter specifies the M coordinate of the 10th value pair of the friction characteristic.				
Dependency:	Refer to: p3829, p3845				
r3840.0...9	CO/BO: Friction characteristic status word / Friction ZSW				
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 7010		
	P-Group: Functions	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Display and BICO output for the status word of the friction characteristic.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Friction characteristic OK	Yes	No	-
	01	Record friction characteristic activated	Yes	No	-
	02	Record friction characteristic completed	Yes	No	-
	03	Record friction characteristic canceled	Yes	No	-
	08	Friction characteristic positive direction	Yes	No	-
	09	Friction torque model controlled status	Upper	Lower	-
Note:	For bit 09: For closed-control of an induction motors with encoder, the switchover between the current and observer model is displayed (see also r1751.19), if p3844 is > 0. For bit 9 = 0 (observer model active), the following applies: The frictional torque is calculated from the characteristic values from the characteristic point entered into p3844.				

For bit 9 = 1 (current model active), the following applies:

The frictional torque is calculated from the characteristic values below the characteristic point entered into p3844.

r3841	CO: Friction characteristic output / Frict outp		
VECTOR_G (n/M)	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 7010
	P-Group: Functions	Unit group: 7_1	Unit selection: p0505
	Not for motor type: REL	Scaling: p2003	Expert list: 1
	Min	Max	Factory setting
	- [Nm]	- [Nm]	- [Nm]
Description:	Display and connector output for the torque of the friction characteristic dependent on the speed.		
Dependency:	Refer to: p1569, p3842		
p3842	Friction characteristic activation / Friction act		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to activate and deactivate the friction characteristic.		
Value:	0: Friction characteristic deactivated 1: Friction characteristic activated		
Dependency:	Refer to: p1569, r3841, p3845		
Notice:	In order that the friction characteristic can be activated, all friction characteristic values (p3820 ... p3839) of all existing drive data sets must be plausible. For speed values the following applies: $0.0 < p3820 < p3821 < \dots < p3829 \leq p0322$ or $p1082$, if $p0322 = 0$ For torque values, the following applies: $0 \leq p3830, p3831 \dots p3839 \leq r0333$		
p3843[0...n]	Friction characteristic frictional torque diff. smoothing time / Frict M_diff t_sm		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [ms]	10000.00 [ms]	0.00 [ms]
Description:	Sets the smoothing time constant (PT1) for the friction torque difference. Smoothing is activated when switching over from status bit r3840.9.		
Dependency:	Refer to: p3844		

p3844[0...n]	Friction characteristic number changeover point upper / FricNo chng_pt up		
VECTOR_G (n/M)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: PMSM, SESM, REL, RESM	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	0
Description:	<p>Selects the upper changeover point of the friction characteristic for the frictional torque input controlled by the motor model of the induction motor.</p> <p>The speed of this changeover point is pre-assigned when automatically calculating with the changeover speed p1752. The changeover point located below is pre-assigned with the changeover speed $p1752 * (1 - p1753)$.</p> <p>Example: $p3844 = 3$ means that the speed value for the change to the monitor model ($p3823 = p1752$) is entered into p3823 (friction characteristic value n3).</p> <p>Depending on the display of r3840.9, the frictional torque is calculated from the friction characteristic values, which are associated with these changeover points. For the changeover of the motor model, with hysteresis, the frictional torque smoothed with p3843 changes between these two states.</p>		
Dependency:	<p>As part of the automatic calculation (p0340), p3844 is only activated for closed loop control (p1300 = 21, 23) of induction motors with encoder.</p> <p>Refer to: p3843</p>		
Notice:	<p>If the changeover point defined using p3844 does not match the changeover speed p1752, then internally, the model-controlled friction torque input is automatically deactivated (same as for p3844 = 0).</p>		
Note:	<p>For p3844 = 0, the model-controlled frictional torque changeover is deactivated. The frictional torque is then calculated the same as for the encoderless control by interpolating between the points along the friction characteristic.</p>		

p3845	Record friction characteristic activation / Frict record act		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 2
	Data type: Integer16	Dyn. index: -	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	<p>Setting for the friction characteristic record.</p> <p>After the next switch-on command, the friction characteristic is automatically recorded.</p>		
Value:	<p>0: Record friction characteristic deactivated 1: Record friction characteristic activated all directions 2: Record friction characteristic activated positive direction 3: Record friction characteristic activated negative direction</p>		
Dependency:	<p>When selecting the friction characteristic measurement, the drive data set changeover is suppressed.</p> <p>For linear drives (refer to r0108.12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.</p>		
Danger:	<p>For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.</p>		
			
Notice:	<p>To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).</p>		
Note:	<p>When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977).</p> <p>When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842.</p> <p>When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and re-magnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.</p>		

p3846[0...n]	Record friction characteristic ramp-up/ramp-down time / Frict rec t_RU/RD		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	999999.000 [s]	10.000 [s]
Description:	Sets the ramp-up/ramp-down time of the ramp-up/ramp-down function generator to automatically Documenting the friction characteristic. The drive is accelerated from standstill (setpoint = 0) up to the maximum speed/velocity (p1082) in this time.		
Dependency:	Refer to: p3845		
p3847[0...n]	Record friction characteristic time to warm up / Frict rec t_warm		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: 7010
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000 [s]	3600.000 [s]	0.000 [s]
Description:	Sets the warm-up time. To start the automatic recording, the highest selected speed (p3829) is approached and this time is held. After this, the measurement is started with the highest speed.		
Dependency:	Refer to: p3829, p3845		
p3848[0...n]	CI: Friction characteristic speed actual value signal source / Frict n_act s_src		
VECTOR_G (n/M)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dyn. index: CDS, p0170	Func. diagram: 7010
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: p2000	Expert list: 1
	Min	Max	Factory setting
	-	-	63[0]
Description:	Sets the signal source for the speed actual value of the friction characteristic.		
Dependency:	Refer to: r1443		
Notice:	The interconnected signal of the speed actual value must be approximately the same as the real motor speed so that when the motor model is replaced, no significant settling operations occur.		
p3860	Number of Braking Modules connected in parallel / BM qty par_cct		
B_INF (Brk Mod ext)	Can be changed: C2(2)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 9951
	P-Group: Converter	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	8	1
Description:	Sets the number of Braking Modules connected in parallel in a DC link.		
Note:	The parameter can only be written to if the infeed is in the commissioning mode (p0010 = 2).		

r3861.0...7	BO: Braking Module inhibit/acknowledgment / BM inhib/ackn		
B_INF (Brk Mod ext)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9951
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Signal to energize terminal X21.1 "inhibit/acknowledgment" on the Braking Module. This binector output is used as signal source to interconnect to a digital output. For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Inhibit/acknowledge Braking Module 1	High	Low	-
	01	Inhibit/acknowledge Braking Module 2	High	Low	-
	02	Inhibit/acknowledge Braking Module 3	High	Low	-
	03	Inhibit/acknowledge Braking Module 4	High	Low	-
	04	Inhibit/acknowledge Braking Module 5	High	Low	-
	05	Inhibit/acknowledge Braking Module 6	High	Low	-
	06	Inhibit/acknowledge Braking Module 7	High	Low	-
	07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning:  It is crucial that you ensure the correct interconnection of binector outputs r3861.n - and/or the wiring of the corresponding digital outputs! If the interconnections/connections are incorrect, and if the Braking Module develops a fault condition, then the software could execute a different (incorrect) function via binector outputs r3861.n.

p3862	Braking Module DC link fast discharge delay time / BM DC-dischg t_del		
B_INF (Brk Mod ext)	Can be changed: C1(3), T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9951
	P-Group: Communications	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge.
Dependency: Refer to: p3863, r3864
Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3863	BI: Activating Braking Module DC link fast discharge / BM DC-dischg act		
B_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9951
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to activate the DC link fast discharge. The DC link fast discharge is started later with delay time (p3862) when the following conditions apply:
 - BI: p3863 = 1 signal.
 - an external line contactor is opened via r0863.1 "energize contactor".
 The DC link fast discharge is interrupted when the following conditions apply:
 - BI: p3863 = 0 signal.
 - ON command for the infeed.

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: Refer to: r3864
Refer to: F30027

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

r3864.0...7 BO: Braking Module DC link fast discharge / BM DC link dischg

B_INF (Brk Mod ext)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9951
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module.
This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fast discharge Braking Module 1	High	Low	-
	01	Fast discharge Braking Module 2	High	Low	-
	02	Fast discharge Braking Module 3	High	Low	-
	03	Fast discharge Braking Module 4	High	Low	-
	04	Fast discharge Braking Module 5	High	Low	-
	05	Fast discharge Braking Module 6	High	Low	-
	06	Fast discharge Braking Module 7	High	Low	-
	07	Fast discharge Braking Module 8	High	Low	-

Dependency: Refer to: p3863
Refer to: F30027

Warning:  It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.
If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-alarm I2t shutdown / BM pre-A I2t shutd

B_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9951
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the message "Pre-alarm I2t shutdown" of the Braking Module.
BI: p3865[0...7] = 1 signal --> no pre-alarm I2t shutdown
BI: p3865[0...7] = 0 signal --> pre-alarm I2t shutdown (A06901)

Dependency: Refer to: A06901

Note: For the Braking Module, this message is output via the following terminal:
- X21.4 for the "Booksize" format
This function is not supported for the "chassis" format.

p3866[0...7]	BI: Braking Module fault / BM fault		
B_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9951
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the "Fault" message of the Braking Module. BI: p3866[0...7] = 1 signal: --> no fault. BI: p3866[0...7] = 0 signal: --> fault is signaled. An automatic acknowledgment via binector output r3861 at certain time intervals is initiated. If, after 375 ms this acknowledgment is not successful, then Alarm A06900 is output.		
Dependency:	Refer to: r3861 Refer to: A06900		
Note:	For the Braking Module, this message is output via the following terminal: - X21.4 for the "Booksize" format - X21.5 for the "Chassis" format		

p3880	BI: ESM activation signal source / ESM act s s		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 7033
	P-Group: Functions	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to activate the essential service mode (ESM) via digital input. Using this function, when required the motor can be operated for as long as possible (e.g. to extract smoke). BI: p3880 = 1 signal: The essential service mode is activated. BI: p3880 = 0 signal: The essential service mode is deactivated.		
Dependency:	The function can only be activated for the following products: - SINAMICS G130/G150/S150 (VECTOR) - SINAMICS S120 AC drive (AC/AC, CU310-2 with PM240-2, VECTOR_AC) If the signal source for the ESM activation is interconnected (p3880 > 0), and a motor encoder is parameterized (p0187, p0400), then for an encoder fault, the fault response is automatically activated (p0491 = 1). Refer to: p3881, p3882, p3883, p3886, r3887, p3888, r3889		
Warning:	When activating the essential service mode (BI: p3880 = 1 signal), the motor immediately runs according to the selected setpoint source. When the essential service mode is activated, the motor cannot be stopped using the OFF commands.		
			
Note:	ESM: Essential Service Mode Permissible signal sources: - BO: r0722.x (high active) - BO: r0723.x (low active), x = 0 ... 17, 20, 21		

p3881		ESM setpoint source / ESM setp_src

	08	Power unit not permissible (permissible p0201 >= 14000)	Yes	No	-
	09	Response OFF1/OFF2 activated	Yes	No	-
	10	Automatic restart interrupted (F07320)	Yes	No	-
	11	Ramp-function generator bypassed	Yes	No	-
Note:	ESM: Essential Service Mode				
p3900		Completion of quick commissioning / Compl quick_comm			
VECTOR_G	Can be changed: C2(1)	Calculated: -	Access level: 1		
	Data type: Integer16	Dyn. index: -	Func. diagram: -		
	P-Group: Displays, signals	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0	3	0		
Description:	Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning. p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1). p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1. p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1.				
Value:	0: No quick parameterization 1: Quick parameterization after parameter reset 2: Quick parameterization (only) for BICO and motor parameters 3: Quick parameterization for motor parameters (only)				
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.				
Note:	When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero. When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten. If a catalog motor has not been selected (p0300), then the following parameters are reset with p3900 > 0 in order to restore the situation that applied when commissioning the drive for the first time: induction motors p0320, p0352, p0353, p0362 ... p0369, p0391 ... p0393, p0604, p0605, p0626 ... p0628 synchronous motor p0326, p0327, p0352, p0353, p0391 ... p0393, p0604, p0605.				

p3900	Completion of quick commissioning / Compl quick_comm		
B_INF	Can be changed: C2(1)	Calculated: -	Access level: 1

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word for the drive unit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Software reset active	Yes	No	-
	01	Writing of parameters disabled as parameter save in progress	Yes	No	-
	02	Writing of parameters disabled as macro is running	Yes	No	-

r3977	BICO counter topology / BICO counter topo		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the BICO interconnections that have been parameterized in the complete (overall) topology. The counter is incremented by one for each modified BICO interconnection.

Dependency: Refer to: r3978, r3979

r3978	BICO CounterDevice / BICO CounterDevice		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the counter reading for modified BICO interconnections on this device. The counter is incremented by one for each modified BICO interconnection.

r3979	BICO counter drive object / BICO counter DO		
VECTOR_G, B_INF, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Commands	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the counter reading for modified BICO interconnections on this drive object. The counter is incremented by one for each modified BICO interconnection.

p3981	Acknowledge drive object faults / Ackn DO faults		
All objects	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dyn. index: -	Func. diagram: 8060
	P-Group: Messages	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to acknowledge all active faults of a drive object.		
Notice:	Safety messages cannot be acknowledged using this parameter.		
Note:	Parameter should be set from 0 to 1 to acknowledge. After acknowledgment, the parameter is automatically reset to 0.		

p3985	Master control mode selection / PcCtrl mode select		
VECTOR_G, B_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Setpoints	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the mode to change over the master control / LOCAL mode.		
Value:	0: Change master control for STW1.0 = 0 1: Change master control in operation		
Danger:	When changing the master control in operation, the drive can manifest undesirable behavior - e.g. it can accelerate up to another setpoint.		
			

r3986	Number of parameters / Param count		
All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of parameters for this drive unit. The number comprises the device-specific and the drive-specific parameters.		
Dependency:	Refer to: r0980, r0981, r0989		

r3988[0...1]	Boot state / Boot_state		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10800	-
Description:	Index 0: Displays the boot state. Index 1: Displays the partial boot state.		
Value:	0: Not active 1: Fatal fault 10: Fault 20: Reset all parameters 30: Drive object modified 40: Download using the commissioning tool		

50: Parameter download using commissioning tool
 90: Reset Control Unit and delete drive objects
 100: Start initialization
 101: Wait for topology input
 110: Instantiate Control Unit basis
 111: Insert drive object
 112: Remove drive object
 113: Change drive object number
 114: Change component number
 115: Parameter download using commissioning tool
 117: Remove component
 150: Wait until actual topology determined
 160: Evaluate topology
 170: Instantiate Control Unit reset
 180: Initialization YDB configuration information
 200: First commissioning
 210: Create drive packages
 250: Wait for topology acknowledge
 325: Wait for input of drive type
 350: Determine drive type
 360: Write into topology-dependent parameters
 370: Wait until p0009 = 0 is set
 380: Check topology
 550: Call conversion functions for parameter
 625: Wait non-cyclic starting DRIVE-CLiQ
 650: Start cyclic operation
 660: Evaluate drive commissioning status
 670: Automatic FW update DRIVE-CLiQ components
 680: Wait for CU LINK slaves
 690: Wait non-cyclic starting DRIVE-CLiQ
 700: Save parameters
 725: Wait until DRIVE-CLiQ cyclic
 740: Check the ability to operate
 745: Start of the time slices
 750: Interrupt enable
 800: Initialization finished
 10050: Wait for synchronization
 10100: Wait for CU LINK slaves
 10150: Wait until actual topology determined
 10200: Evaluate component status
 10250: Call conversion functions for parameter
 10300: Preparation cyclic operation
 10350: Automatic FW update DRIVE-CLiQ components
 10400: Wait for slave properties
 10450: Check CX/NX status
 10500: Wait until DRIVE-CLiQ cyclic
 10550: Carry out warm start
 10600: Evaluate, encoder status
 10800: Partial boot completed

Index:
 [0] = System
 [1] = Partial boot

Value:	0: 0.1 A total current limit DI/DO 8 ... 11 1: 1.0 A total current limit DI/DO 8 ... 11		
Dependency:	Refer to: p4028		
Warning:	Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.		
			

r4047 **TM31 digital outputs status / TM31 DO status**

TM31	Can be changed: -	Calculated: -	Access level: 1	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: 9556, 9560, 9562	
	P-Group: Commands	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	

Description: Displays the status of the digital outputs of Terminal Module 31 (TM31).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DO 0 (X542.1 - 3)	High	Low	-
	01	DO 1 (X542.4 - 6)	High	Low	-
	08	DI/DO 8 (X541.2)	High	Low	-
	09	DI/DO 9 (X541.3)	High	Low	-
	10	DI/DO 10 (X541.4)	High	Low	-
	11	DI/DO 11 (X541.5)	High	Low	-

Note: Inversion using p4048 has been taken into account.
The setting of the DI/DO as either input or output is of no significance (p4028).
DO: Digital Output
DI/DO: Bidirectional Digital Input/Output

r4047 **TB30 digital outputs status / TB30 DO status**

TB30	Can be changed: -	Calculated: -	Access level: 1

Note:	AI: Analog Input		

p4056[0...1]		TM31 analog inputs type / TM31 AI type	
TM31	Can be changed: U, T Data type: Integer16 P-Group: Terminals Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5	Access level: 1 Func. diagram: 9566, 9568 Unit selection: - Expert list: 1 Factory setting 4
Description:	Sets the type of analog inputs of Terminal Module 31 (TM31). p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V). p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA). In addition, the associated switch S5 must be appropriately set. AI 0: S5.0 = V --> voltage input, S5.0 = I --> current input (burden resistor = 250 Ohm) AI 1: S5.1 = V --> voltage input, S5.1 = I --> current input (burden resistor = 250 Ohm)		
Value:	0: Unipolar voltage input (0 V ... +10 V) 2: Unipolar current input (0 mA ... +20 mA) 3: Unipolar current input monitored (+4 mA to +20 mA) 4: Bipolar voltage input (-10 V ... +10 V) 5: Bipolar current input (-20 mA to +20 mA)		
Index:	[0] = AI 0 (X521.1/X521.2, S5.0) [1] = AI 1 (X521.3/X521.4, S5.1)		
Warning:	The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V. For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.		
			
Notice:	For operation as a voltage input/current input, switch S5.0 or S5.1 must be appropriately set.		
Note:	When changing p4056, the parameters of the scaling characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values: For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %. For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %. For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.		

r4056[0...1]		TB30 analog inputs type / TB30 AI type	
TB30	Can be changed: - Data type: Integer16 P-Group: Terminals Not for motor type: - Min 4	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the type of analog inputs.		
Value:	4: Bipolar voltage input (-10 V ... +10 V)		
Index:	[0] = AI 0 (X482.1/X482.2) [1] = AI 1 (X482.3/X482.4)

	Min	Max	Factory setting
	0.0 [ms]	1000.0 [ms]	0.0 [ms]
Description:	Sets the smoothing time constant of the 1st order lowpass filter for the analog outputs of the Terminal Board 30 (TB30).		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
r4074[0...1]	TM31 analog outputs current output voltage/current / TM31 AO U/I_outp		
TM31	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the actual output voltage in V when set as voltage output. Displays the actual output voltage in mA when set as current output.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	The type of the analog output AO x (voltage or current output) is set using p4076.		
	Refer to: r4076, p4076		
Note:	AO: Analog Output		

r4074[0...1]	TB30 analog outputs actual output voltage / TB30 AO U_outp		
TB30	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the actual output voltage at the analog outputs of the Terminal Board 30 (TB30).		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
p4075[0...1]	TM31 analog outputs activate absolute value generation / TM31 AO absVal act		
TM31	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Activates the absolute value generation for the analog outputs of Terminal Module 31 (TM31).		
Value:	0: No absolute value generation 1: Absolute value generation switched in		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
p4075[0...1]	TB30 analog outputs activate absolute value generation / TB30 AO absVal act		
TB30	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Activates the absolute value generation for the analog outputs of the Terminal Board 30 (TB30).		
Value:	0: No absolute value generation 1: Absolute value generation switched in		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
p4076[0...1]	TM31 analog outputs type / TM31 AO type		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	4
Description:	Sets the type of analog outputs of Terminal Module 31 (TM31). p4076[x] = 1, 4 correspond to a voltage output (p4074, p4078, p4080, p4083 are displayed in V). p4076[x] = 0, 2, 3 correspond to a current output (p4074, p4078, p4080, p4083 are displayed in mA).		
Value:	0: Current output (0 mA ... +20 mA) 1: Voltage output (0 V ... +10 V) 2: Current output (+4 mA ... +20 mA) 3: Current output (-20 mA ... +20 mA) 4: Voltage output (-10 V ... +10 V)		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		

2 Parameters

2.2 List of parameters

Dependency: Refer to: p4077, p4078, p4079, p4080
Note: When changing p4076, the parameters of the scaling characteristic (p4077, p4078, p4079, p4080) are overwritten with the following default values:
For p4076 = 0, 3, p4077 is set to 0.0 %, p4078 to 0.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.
For p4076 = 1, 4, p4077 is set to 0.0 %, p4078 to 0.0 V, p4079 to 100.0 % and p4080 to 10.0 V.
For p4076 = 2, p4077 is set to 0.0 %, p4078 to 4.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

r4076[0...1]	TB30 analog outputs type / TB30 AO type		
TB30	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	4	4	-
Description:	Displays the type of analog outputs of the Terminal Board 30 (TB30).		
Value:	4: Voltage output (-10 V ... +10 V)		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		

p4077[0...1]	TM31 analog outputs characteristic value x1 / TM31 AO char x1		
TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	0.00 [%]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	Refer to: r4076, p4076		
Notice:	This parameter is automatically overwritten when changing p4076 (type of analog outputs).		
Note:	The parameters for the characteristic do not have a limiting effect.		

p4077[0...1]	TB30 analog outputs characteristic value x1 / TB30 AO char x1		
TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	0.00 [%]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
Note:	The parameters for the characteristic do not have a limiting effect.		

p4078[0...1]		TM31 analog outputs characteristic value y1 / TM31 AO char y1	
TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	0.000
Description:	Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the y coordinate (output voltage in V or output current in mA) of the 1st value pair of the characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	The unit of this parameter (V or mA) depends on the analog output type. Refer to: r4076, p4076		
Notice:	This parameter is automatically overwritten when changing p4076 (type of analog outputs).		
Note:	The parameters for the characteristic do not have a limiting effect.		
p4078[0...1]		TB30 analog outputs characteristic value y1 / TB30 AO char y1	
TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-11.000 [V]	11.000 [V]	0.000 [V]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the y coordinate (output voltage in V) of the 1st value pair of the characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
Note:	The parameters for the characteristic do not have a limiting effect.		
p4079[0...1]		TM31 analog outputs characteristic value x2 / TM31 AO char x2	
TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the x coordinate (percentage) of the 2nd value pair of the characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	Refer to: r4076, p4076		
Notice:	This parameter is automatically overwritten when changing p4076 (type of analog outputs).		
Note:	The parameters for the characteristic do not have a limiting effect.		

p4079[0...1]	TB30 analog outputs characteristic value x2 / TB30 AO char x2		
TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	100.00 [%]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the x coordinate (percentage) of the 2nd value pair of the characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
Note:	The parameters for the characteristic do not have a limiting effect.		
p4080[0...1]	TM31 analog outputs characteristic value y2 / TM31 AO char y2		
TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	10.000
Description:	Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the y coordinate (output voltage in V or output current in mA) of the 2nd value pair of the characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	The unit of this parameter (V or mA) depends on the analog output type. Refer to: r4076, p4076		
Notice:	This parameter is automatically overwritten when changing p4076 (type of analog outputs).		
Note:	The parameters for the characteristic do not have a limiting effect.		
p4080[0...1]	TB30 analog outputs characteristic value y2 / TB30 AO char y2		
TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-11.000 [V]	11.000 [V]	10.000 [V]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the y coordinate (output voltage in V) of the 2nd value pair of the characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
Note:	The parameters for the characteristic do not have a limiting effect.		

p4082[0...1]	BI: TM31 analog outputs invert signal source / TM31 AO inv s_src		
TM31	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to invert the analog output signals of Terminal Module 31 (TM31).		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		

p4082[0...1]	BI: TB30 analog outputs invert signal source / TB30 AO inv s_src		
TB30	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 9106
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for inverting the analog output signals of the Terminal Board 30 (TB30).		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		

p4083[0...1]	TM31 analog outputs offset / TM31 AO offset		
TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9572
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-20.000	20.000	0.000
Description:	Sets the offset for the analog outputs of Terminal Module 31 (TM31). The offset is added to the output signal after the scaling characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	The unit of this parameter (V or mA) depends on the analog input type. Refer to: r4076, p4076		
Note:	This means, for example, the offset of a downstream isolating amplifier can be compensated.		

p4083[0...1]	TB30 analog outputs offset / TB30 AO offset		
TB30	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9106

	Min	Max	Factory setting
	-20.000	20.000	0.000
Description:	Sets the setpoint for the input value in simulation mode of the analog inputs of Terminal Module 31 (TM31).		
Index:	[0] = AI 0 (X521.1/X521.2, S5.0) [1] = AI 1 (X521.3/X521.4, S5.1)		
Dependency:	The simulation of an analog input is selected using p4097. If AI x is parameterized as voltage input (p4056), then the setpoint is a voltage in V. If AI x is parameterized as current input (p4056), then the setpoint is a current in mA. Refer to: r4056, p4056, p4097		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		

p4098[0...1]	TB30 analog inputs simulation mode setpoint / TB30 AI sim setp		
TB30	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -11.000 [V]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 11.000 [V]	Access level: 2 Func. diagram: 9104 Unit selection: - Expert list: 1 Factory setting 0.000 [V]
Description:	Sets the setpoint for the input voltage in the simulation mode of the analog inputs of Terminal Board 30 (TB30).		
Index:	[0] = AI 0 (X482.1/X482.2) [1] = AI 1 (X482.3/X482.4)		
Dependency:	The simulation of an analog input is selected using p4097. Refer to: p4097		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		
p4099[0...2]	TM31 inputs/outputs sampling time / TM31 I/O t_sample		
TM31	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 9549, 9550 Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Analog outputs (AO)		
Dependency:	The parameter can only be modified for p0009 = 3, 29. The following applies for the sampling time: The sampling times at a DRIVE-CLiQ line must be integral multiples of one another. The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system. The minimum permissible sampling time is 125 µs. The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs). Refer to: p0009, r0110, r0111		
Notice:	The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).		
Note:	The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0). Parameter p4099[0] must never be equal to zero.		
p4099[0...2]	TB30 inputs/outputs sampling time / TB30 I/O t_sample		
TB30	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 9099, 9100 Unit selection: - Expert list: 1 Factory setting [0] 4000.00 [µs] [1] 4000.00 [µs] [2] 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of Terminal Board 30 (TB30).		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Analog outputs (AO)		

2 Parameters

2.2 List of parameters

- Dependency:** The parameter can only be modified for p0009 = 3, 29.
The sampling times can only be set as an integer multiple of the lowest basic sampling time (r0110[0]).
Refer to: p0009, r0110, r0111
- Note:** The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).
For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. analog/digital converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is switched off. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].

p4100[0...3]	TM120 temperature evaluation, sensor type / TM120 sensor type		
TM120	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9605, 9606
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	1
Description:	Sets the sensor type for temperature evaluation via Terminal Module 120 (TM120). This means that the temperature sensor type is selected and the evaluation is switched in.		
Value:	0: Evaluation disabled 1: PTC thermistor 2: KTY84 4: Bimetallic NC contact 6: PT1000		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3		
Notice:	For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated. For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies: To activate the corresponding alarm or fault, p4102[0...7] must be set <= 250 °C.		
Note:	The temperature sensors are connected to the following terminals: X521.2(+) and X521.1(-) = channel 0 X521.4(+) and X521.3(-) = channel 1 X521.6(+) and X521.5(-) = channel 2 X521.8(+) and X521.7(-) = channel 3		

p4100[0...11]	TM150 sensor type / TM150 sensor type		
TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	5
Description:	Sets the sensor type for Terminal Module 150 (TM150) This means that the temperature sensor type is selected and the evaluation is switched in.		
Value:	0: Evaluation disabled 1: PTC thermistor 2: KTY84 4: Bimetallic NC contact 5: PT100 6: PT1000		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3 [4] = Temperature channel 4 [5] = Temperature channel 5		

[6] = Temperature channel 6
 [7] = Temperature channel 7
 [8] = Temperature channel 8
 [9] = Temperature channel 9
 [10] = Temperature channel 10
 [11] = Temperature channel 11

Notice: For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.
 For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:
 To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:
 X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)
 X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)
 X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)
 X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
 X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
 X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)
 Details on the wiring are included in the parameter description for p4108.

p4100	TM31 sensor type / TM31 sensor type		
TM31	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9576
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	0
Description:	Sets the sensor type for Terminal Module 31 (TM31) This means that the temperature sensor type is selected and the evaluation is switched in.		
Value:	0: Evaluation disabled 1: PTC thermistor 2: KTY84 6: PT1000		
Notice:	For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated. For sensor type "PTC thermistor" (p4100 = 1), the following applies: To activate the corresponding alarm or fault, p4102[0...1] must be set <= 250 °C.		
Note:	The temperature sensor is connected at terminals X522.7(+) and X522.8(-).		

r4101[0...3]	TM120 sensor resistance / TM120 R_sensor		
TM120	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9605, 9606
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	- [ohm]	- [ohm]	- [ohm]
Description:	Displays the actual resistance value of the temperature sensor connected at the Terminal Module.		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3		
Note:	The maximum measurable resistance value is approx. 1720 Ohm. The temperature sensors are connected to the following terminals: X521.2(+) and X521.1(-) = channel 0 X521.4(+) and X521.3(-) = channel 1 X521.6(+) and X521.5(-) = channel 2 X521.8(+) and X521.7(-) = channel 3		

r4101[0...11]	TM150 sensor resistance / TM150 R_sensor		
TM150	Can be changed: - Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [ohm]	Access level: 3 Func. diagram: 9626, 9627 Unit selection: - Expert list: 1 Factory setting - [ohm]
Description:	Displays the actual resistance value of the temperature sensor connected at the Terminal Module.		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3 [4] = Temperature channel 4 [5] = Temperature channel 5 [6] = Temperature channel 6 [7] = Temperature channel 7 [8] = Temperature channel 8 [9] = Temperature channel 9 [10] = Temperature channel 10 [11] = Temperature channel 11		
Note:	The maximum measurable resistance value is approx. 2500 Ohm. For 1x2 and 2x2 wire evaluation: The actual sensor resistance is displayed in this parameter(i.e. the wire resistance (p4110) is taken into account). The temperature sensors are connected to the following terminals: X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6) X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7) X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8) X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9) X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10) X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11) Details on the wiring are included in the parameter description for p4108.		
r4101	TM31 sensor resistance / TM31 R_sensor		
TM31	Can be changed: - Data type: Unsigned16 P-Group: Terminals Not for motor type: - Min - [ohm]	Calculated: - Dyn. index: - Unit group: - Scaling: PERCENT Max - [ohm]	Access level: 3 Func. diagram: 9576 Unit selection: - Expert list: 1 Factory setting - [ohm]
Description:	Displays the actual resistance value of the temperature sensor connected at the Terminal Module.		
Note:	The maximum measurable resistance value is approx. 1720 Ohm. The temperature sensor is connected at terminals X522.7(+) and X522.8(-).		
p4102[0...7]	TM120 fault threshold/alarm threshold / TM120 F/A_thresh		
TM120	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min -48 [°C]	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 251 [°C]	Access level: 1 Func. diagram: 9605, 9606 Unit selection: - Expert list: 1 Factory setting 251 [°C]
Description:	Sets the fault threshold/alarm threshold for Terminal Module 120 (TM120). A35211 is initiated, if the temperature actual value r4105[0] > p4102[0] F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired A35212 is initiated, if the temperature actual value r4105[1] > p4102[2]		

F35208 is initiated if the temperature actual value $r4105[1] > p4102[3]$ or timer $p4103[1]$ has expired

A35213 is initiated, if the temperature actual value $r4105[2] > p4102[4]$

F35209 is initiated if the temperature actual value $r4105[2] > p4102[5]$ or timer $p4103[2]$ has expired

A35214 is initiated, if the temperature actual value $r4105[3] > p4102[6]$

F35210 is initiated if the temperature actual value $r4105[3] > p4102[7]$ or timer $p4103[3]$ has expired

For alarms A35211, A35212, A35213, A35214 the following applies:

- Remains until the temperature actual value ($r4105[0...3]$) reaches or falls below the value ($p4102[0, 2, 4, 6]$) - hysteresis).

For fault F35207, F35208, F35209, F35210 the following applies:

- Remains until the temperature actual value ($r4105[0...3]$) reaches or falls below the value ($p4102[1, 3, 5, 7]$) - hysteresis) and the fault has been acknowledged.

- the hysteresis value is 5 K and cannot be changed.

Index:
 [0] = Channel 0 alarm threshold (A35211)
 [1] = Channel 0 fault threshold (F35207)
 [2] = Channel 1 alarm threshold (A35212)
 [3] = Channel 1 fault threshold (F35208)
 [4] = Channel 2 alarm threshold (A35213)
 [5] = Channel 2 fault threshold (F35209)
 [6] = Channel 3 alarm threshold (A35214)
 [7] = Channel 3 fault threshold (F35210)

Dependency: Refer to: p4103

Notice: Fault F35207 ... F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

For $p4102[0...7] = 251$ °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" ($p4100[0...3] = 1$), the following applies:

To activate the corresponding alarm or fault, $p4102[0...7]$ must be set ≤ 250 °C.

Note: The temperature sensor is connected to the following terminals:

X521.2(+) and X521.1(-) = channel 0

X521.4(+) and X521.3(-) = channel 1

X521.6(+) and X521.5(-) = channel 2

X521.8(+) and X521.7(-) = channel 3

p4102[0...23] TM150 fault threshold/alarm threshold / TM150 F/A_thresh

TM150	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-99 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 150 (TM150).
 For alarms (even indices [0, 2, 4 ... 22]), the following applies:
 - the corresponding alarm is initiated, if the temperature actual value associated with a temperature channel exceeds the associated alarm threshold ($r4105[x] > p4102[2x]$). In addition, the timer is started ($p4103[x]$).
 - the alarm remains until the temperature actual value ($r4105[x]$) reaches or falls below the threshold value ($p4102[2x]$) - hysteresis ($p4118[x]$).
 For faults (uneven indices [1, 3, 5 ... 23]), the following applies:
 - the corresponding fault is initiated, if the temperature actual value associated with a temperature channel exceeds the associated fault threshold ($r4105[x] > p4102[2x+1]$) or the associated timer ($p4103[x]$) has expired.
 - the fault remains until the temperature actual value ($r4105[x]$) reaches or falls below the threshold value ($p4102[2x+1]$) - hysteresis ($p4118[x]$) and the fault has been acknowledged.

- [23] = Channel 11 fault threshold (F35407)

Dependency:

Refer to: p4103, r4104, r4105, p4118

Notice:

Faults F35207 ... F35210 and F35400 ... F35407 only cause the drive to be shut down if there is at least one BICO interconnection between the drive and the TM150.

For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...11] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note:

The hysteresis can be set in p4118[0...11].

Factory setting

-48 [°C]

251 [°C]

[0] 100 [°C]

[1] 120 [°C]

Description:

Sets the fault threshold/alarm threshold for Terminal Module 31 (TM31).

A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]

F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired

For alarm A35211 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis).

For fault F35207 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged.

- the hysteresis value is 5 K and cannot be changed by the user.

Index:

[0] = Alarm threshold

[1] = Fault threshold

Dependency:

Refer to: r4104

Notice:

Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100 = 1), the following applies:

To activate the alarm or fault, p4102[0...1] must be set <= 250 °C.

2 Parameters

2.2 List of parameters

Warning:

The fault F35207 ... F35210 and F35400 ... 35407 only results in the drive being shut down if at least one BICO interconnection exists between the drive and the TM150.

Note:

For p4103 = 0 s and sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:
 - the corresponding fault can only be initiated via the fault threshold (output of the timer is always a logical 0).
 For p4103 = 0 s and sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:
 - the corresponding alarm and fault are simultaneously output (delay time = 0 s).

p4103

TM31 temperature evaluation delay time / TM31 temp t_delay

TM31

Can be changed: U, T	Calculated: -	Access level: 1
Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9576
P-Group: Motor	Unit group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
0.000 [ms]	600000.000 [ms]	0.000 [ms]

Description:

Sets the delay time for the output of the fault for the Terminal Module 31 (TM31).
 The timer is started when the alarm threshold (p4102[0]) is exceeded.
 If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F35207 is output.
 The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.
 For sensor type "KTY84" "PT1000" (p4100 = 2, 6), the following applies:
 If the fault threshold (p4102[1]) is exceeded before the delay time has expired, then fault F35207 is immediately output.
 For sensor type "PTC thermistor" (p4100 = 1), the following applies:
 - Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Dependency:

Refer to: r4104

Warning:

Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note:

With p4103 = 0, the timer is deactivated and only the fault threshold is effective.

[1]	= X532
[2]	= X533
[3]	= X534
[4]	= X535
[5]	= X536

2 Parameters

2.2 List of parameters

Note: The temperature sensors are connected to the following terminals:
X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)
X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)
X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)
X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)
For p4108[0...5] = 0, 2, 3 (1x2, 3, 4 wire evaluation):
The temperature channel belonging to the terminal block with the higher number is automatically deactivated (e.g. for X531 with 3-wire evaluation, channel 6 is deactivated).

p4109[0...11]	TM150 wire resistance measurement / TM150 R_wire meas		
TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Setting to start the measurement of the wire resistance for a channel for the Terminal Module 150 (TM150).
For a 2 wire evaluation, the total wire resistance is measured and saved. During the temperature evaluation, the temperature actual value is automatically calibrated using the measured wire resistance.

Procedure:

1. Select the measuring method (1x2/2x2) for the corresponding terminal block (p4108[0...5] = 0, 1).
2. Set the required sensor type for the corresponding channel (p4100[x] = 1 ... 6, x = 0...5 or 0...11).
3. Jumper the sensor to be connected (short-circuit the sensor cable close to the sensor).
4. Connect the sensor conductors to the appropriate terminals 1(+), 2(-) or 3(+), 4(-).
5. For the corresponding channel, start the measurement of the wire resistance (p4109[x] = 1).
6. After p4109[x] = 0, check the measured resistance value in p4110[x].
7. Remove the jumper across the temperature sensor.

Value:
0: Inactive
1: Start

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Dependency: Refer to: p4100, p4108, p4110

Notice: Wire resistance measurement is only possible for 1x2 or 2x2 wire evaluation (p4108[0...5] = 0, 1).

Note: The wire resistance value can be also directly entered into p4110[0...11].
The automatic conductor calibration for 1x2 and 2x2 wire evaluation is always performed with the value in p4110[0...11].

	10	Temperature channel 10	Yes	No	-
	11	Temperature channel 11	Yes	No	-
Dependency:	Refer to: r4105, r4112, r4113, r4114				

2 Parameters

2.2 List of parameters

- Notice:** When forming groups, it must be ensured that in one particular group, only temperature channels with the following sensor types are included:
- "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6), real temperature actual value
or alternatively
- "PTC thermistor", "bimetallic NC contact" (p4100[0...11] = 1, 4), fictitious temperature actual value (-50 °C, 250 °C)
If these sensor types are combined within one group, then the calculated values for maximum, minimum and average value will be falsified.
- Note:** Active and inactive temperature channels can be included in one group. However, when calculating the values (r4112, r4113, r4114) only the active temperature channels with valid actual value are taken into account (r4105[0...11] not equal to -300 °C).

r4112[0...2] CO: TM150 group temperature actual value maximum value / TM150 grp temp max

TM150	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9625

TM150	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: 9625
	P-Group: Terminals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: p2006	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]
Description:	Display and connector output for the average value of each group for the Terminal Module 150 (TM150). This value is calculated from the actual temperature values (r4105[0...11]) of each group.		
Recommendation:	The following connector inputs can use these connector outputs for interconnection: - CI: p0603 - CI: p0608[0...3] - CI: p0609[0...3] - CI: p2051		
Index:	[0] = Group 0 [1] = Group 1 [2] = Group 2		
Dependency:	Refer to: r4105, p4111, r4112, r4113		
Note:	If one group is assigned sensor type "PTC" or "bimetal NC contact", then the average value -300 °C is output.		
p4117[0...2]	TM150 group sensor error effect / TM150 error effect		
TM150	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dyn. index: -	Func. diagram: 9625
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the effect for an error of a sensor of a group for Terminal Module TM150 (TM150). For p4117 = 0, the following applies: The defective temperature sensor assigned to a group is not take into account when forming the group. For p4117 = 1, the following applies: For a sensor error, for the maximum value, minimum value and average value of the corresponding group, a value of -300 °C is output.		
Value:	0: Skip sensor 1: Output value = -300 °C		
Index:	[0] = Group 0 [1] = Group 1 [2] = Group 2		
Dependency:	Refer to: r4105, p4111, r4112, r4113, r4114		
p4118[0...11]	TM150 fault threshold/alarm threshold hysteresis / TM150 thresh hyst		
TM150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned16	Dyn. index: -	Func. diagram: 9626, 9627
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [K]	50 [K]	5 [K]
Description:	Sets the hysteresis for the fault threshold/alarm threshold (p4102[0...23]) for the Terminal Module 150 (TM150).		
Index:	[0] = Temperature channel 0 [1] = Temperature channel 1 [2] = Temperature channel 2 [3] = Temperature channel 3 [4] = Temperature channel 4 [5] = Temperature channel 5		

2 Parameters

2.2 List of parameters

[6] = Temperature channel 6
 [7] = Temperature channel 7
 [8] = Temperature channel 8
 [9] = Temperature channel 9
 [10] = Temperature channel 10
 [11] = Temperature channel 11

Dependency:

Refer to: p4102, p4103, r4104, r4105

Note:

The following applies for a corresponding alarm:

- Remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x]) - hysteresis (p4118[x]).

The following applies for a corresponding fault:

- Remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x+1]) - hysteresis (p4118[x]) and the fault has been acknowledged.

p4641[0...2]	OEM encoder diagnostic signal selection / OEM enc diag sel		
VECTOR_G	Can be changed: U, T Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the trace functionality for OEM encoder manufacturers.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
p4642	Encoder fault test function / Encoder fault test		
VECTOR_G	Can be changed: U, T Data type: Unsigned8 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Test function to initiate an encoder fault For p4642 = 1: When setting, an encoder fault is output once at the currently used motor encoder. Depending on the configuration in p0491, the drive switches over to encoderless operation. This means that encoderless motor stopping can be tested. For p4642 = 2: When setting, an encoder fault is output once at the currently used motor encoder. For braking, the drive still uses the commutation position of the encoder. This means that a faster motor stopping with encoder can be tested (only functions with SMx modules, otherwise the same response as for p4642 = 1). The following generally applies: After acknowledgment, the encoder fault that was issued is cleared and p4642 is set = 0.		
Notice:	It is not permissible that a data set is switched over between an encoder fault being issued and its deletion.		
r4648.0	CO/BO: Encoder status word / Enc status word		
VECTOR_G	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and BICO output for the encoder status word. For bit 00: The bit is a group message for all encoders of the axis, and is set for the following alarms: A3x407: "Function limit reached" A3x415: "Signal level track A or B out of tolerance (alarm)"		

A3x419: "Track A or B out of tolerance"
 A3x442: "Battery voltage alarm threshold reached"
 x = encoder 1, 2, 3

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Encoder maintenance required	Yes	No	-

Notice: Maintenance work may have to be carried out on the encoder.

Note: For bit 00:

For test purposes, the bit can be set using p4642 = 3.

The bit is reset using p4642 = 0.

p4649[0...n] Encoder function reserve amplitude limit incremental signals / Enc fct amp inc

VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	500	0

Description: Amplitude threshold of the incremental signals for the function reserve.

If the set amplitude threshold on the incremental signals is fallen below, then alarm A3x407 "Encoder x; function limit reached " is output.

Note: An amplitude threshold of 230 mV can be used as default value.

p4650 Encoder functional reserve component number / Enc fct_res num

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	399	0

Description: Sets the component number (p0141) of the encoder whose functional reserve is to be displayed (r4651).

Dependency: Refer to: r4651

r4651[0...3] Encoder functional reserve / Enc fct_reserve

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]

Description: Displays the functional reserve of the encoder selected via p4650.

0 ... 25 %:

The function limit has been reached. A service is recommended.

26 ... 100 %:

The encoder is working in the specified range.

Index: [0] = Function reserve 1

[1] = Function reserve 2

[2] = Function reserve 3

[3] = Function reserve 4

Dependency: Refer to: p4650

Note: Value = 999 means:

- the component specified in p4650 is not connected

- the encoder does not support the display of the functional reserve

p4652[0...2]	XIST1_ERW reset mode / XIST1_ERW res mode		
VECTOR_G	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4750
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the mode to reset the actual value in XIST_ERW (CO: r4653).		
Value:	0: Inactive 1: Reset with zero mark 2: Reset with BICO 3: Reset with selected zero mark		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: r4653, r4654, p4655		
Note:	The absolute value is only valid after passing the zero mark. If value = 1: The value in XIST1_ERW is reset when passing every zero mark. If value = 2: The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655. If value = 3: The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.		

p4652	XIST1_ERW reset mode / XIST1_ERW res mode		
ENC	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: 4750
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the mode to reset the actual value in XIST_ERW (CO: r4653).		
Value:	0: Inactive 1: Reset with zero mark 2: Reset with BICO 3: Reset with selected zero mark		
Dependency:	Refer to: r4653, r4654, p4655		
Note:	The absolute value is only valid after passing the zero mark. If value = 1: The value in XIST1_ERW is reset when passing every zero mark. If value = 2: The value in XIST1_ERW is reset with a 0/1 edge via binector input p4655. If value = 3: The value in XIST1_ERW is reset after a 0/1 edge via binector input p4655 when passing the next zero mark.		

r4653[0...2]	CO: XIST1_ERW actual value / XIST1_ERW actual

Description:	Display and BICO output to reset XIST1_ERW.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	XIST1_ERW reset	High	Low
				FP
				-
Dependency:	Refer to: p4652, r4653, p4655			
Note:	The reset of XIST1_ERW is initiated via binector input p4655. Binector output r4654 is reset with a 0 signal from binector input p4655.			

2 Parameters

2.2 List of parameters

p4655[0...2]	BI: XIST1_ERW reset signal source / XIST1_ERW resS_src		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 4750
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to reset XIST1_ERW (CO: r4653).		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p4652, r4653, r4654		
Note:	The reset of XIST1_ERW depends on the selected mode (p4652).		
p4655	BI: XIST1_ERW reset signal source / XIST1_ERW resS_src		
ENC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: 4750
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to reset XIST1_ERW (CO: r4653).		
Dependency:	Refer to: p4652, r4653, r4654		
Note:	The reset of XIST1_ERW depends on the selected mode (p4652).		
p4660[0...2]	Sensor Module filter bandwidth / SM Filt_bandw		
VECTOR_G	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [kHz]	20000.00 [kHz]	0.00 [kHz]
Description:	Sets the filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The value set on the Sensor Module is displayed in r4661. Currently, the Sensor Module hardware only supports the following values: - 0: The Sensor Module's default setting is used. - 50 kHz - 170 kHz - 500 kHz - Unlimited: Only the bandwidth of the operational amplifier is effective.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: r4661		
Note:	A value of zero is displayed if an encoder is not present.		

p4660	Sensor Module filter bandwidth / SM Filt_bandw		
ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [kHz]	20000.00 [kHz]	0.00 [kHz]
Description:	Sets the filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The value set on the Sensor Module is displayed in r4661. Currently, the Sensor Module hardware only supports the following values: - 0: The Sensor Module's default setting is used. - 50 kHz - 170 kHz - 500 kHz - Unlimited: Only the bandwidth of the operational amplifier is effective.		
Dependency:	Refer to: r4661		
Note:	A value of zero is displayed if an encoder is not present.		
r4661[0...2]	Sensor Module filter bandwidth display / SM Filt_bandw disp		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kHz]	- [kHz]	- [kHz]
Description:	Displays the effective filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The bandwidth of the filter is set using p4660.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p4660		
Note:	A value of zero is displayed if an encoder is not present.		
r4661	Sensor Module filter bandwidth display / SM Filt_bandw disp		
ENC	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [kHz]	- [kHz]	- [kHz]
Description:	Displays the effective filter bandwidth for Sensor Module SMx10 (resolver) and SMx20 (sin/cos). The bandwidth of the filter is set using p4660.		
Dependency:	Refer to: p4660		
Note:	A value of zero is displayed if an encoder is not present.		

2 Parameters

2.2 List of parameters

p4662[0...n]	Encoder characteristic type / Enc char_type		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the characteristic type. For non-linear sensors, the interrelationship between the signal voltage and the position can be defined using a third degree polynomial.		
Value:	0: Characteristic inactive 1: Characteristic polynomial third degree		
Dependency:	Refer to: p4663, p4664, p4665, p4666		
Note:	If value = 1: A third degree polynomial is defined as follows: $F(x) = K3 * x^3 + K2 * x^2 + K1 * x + K0$ Coefficients K0 ... K3 should be defined and entered into p4663 ... p4666. The sensor range is emulated to $x = -0.5 \dots +0.5$.		
p4663[0...n]	Encoder characteristic K0 / Enc char K0		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Setting for coefficient K0 to calculate the characteristic (p4662).		
Dependency:	Refer to: p4662, p4664, p4665, p4666		
p4664[0...n]	Encoder characteristic K1 / Enc char K1		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Setting for coefficient K1 to calculate the characteristic (p4662).		
Dependency:	Refer to: p4662, p4663, p4665, p4666		
p4665[0...n]	Encoder characteristic K2 / Enc char K2		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Setting for coefficient K2 to calculate the characteristic (p4662).		
Dependency:	Refer to: p4662, p4663, p4664, p4666		

p4666[0...n]	Encoder characteristic K3 / Enc char K3		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Setting for coefficient K3 to calculate the characteristic (p4662).		
Dependency:	Refer to: p4662, p4663, p4664, p4665		

p4670[0...n]	Analog sensor configuration / Ana_sens config		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for evaluation on the analog sensor.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	06	Set velocity to 0	Yes	No	-
	08	Position value range	0.0 / 1.0 pulse	-0.5 / +0.5 pulse	-
	09	Fault/alarm messages	Alarm	Fault	-
	10	Channel B act	Yes	No	-
	11	Channel A act	Yes	No	-
	13	Commutation angle constant	Yes	No	-
	14	Suppress faults	Yes	No	-
	31	Extrapolation	ON	OFF	-

Notice: For bit 06:
Setting the bit sets the velocity actual value (r0061) permanently to 0.

For bit 13:
Setting the bit sets the commutation angle permanently to the commutation angle offset (p0431).

Note: For bit 09:
A setting of bit = 0 will trigger a fault for the relevant channel if the actual value is invalid.
A setting of bit = 1 will trigger an alarm for the relevant channel if the actual value is invalid.
For bits 10, 11:
If both channels are activated, the actual value is generated from the mean value of both channels. If a channel fails (actual value invalid), it is not included when the mean value is generated.
For bit 14:
The bit is only evaluated for encoder 1. Otherwise no effect.

p4671[0...n]	Analog sensor input / Ana_sens inp		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the input circuit for the analog sensor.		
Value:	0: Differential 1: Single-ended A, B 2: Single-ended A*, B* 3: Single-ended A, B sensitive		

2 Parameters

2.2 List of parameters

Note:

p4671 = 0:
The two signals on a track are evaluated differentially.

p4671 = 1:
Only the non-inverted signal on a track is evaluated.

p4671 = 2:
Only the inverted signal on a track is evaluated.

p4671 = 3:
Only the non-inverted signal on a track (high resolution) is evaluated.

p4672[0...n]	Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.0000 [V]	10.0000 [V]	0.0000 [V]
Description:	Sets the voltage when the connected sensor is at actual value zero. At this voltage channel A supplies an actual value of zero.		

p4673[0...n]	Analog sensor channel A voltage per encoder period / Ana_sens A U/per		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.0000 [V]	10.0000 [V]	6.0000 [V]
Description:	Sets the output voltage range to be mapped for the connected analog sensor. The voltage range is determined by the following parameters: - p4672 (voltage at actual value 0) - p4673 (voltage per encoder period)		
Note:	The minimum actual value which can be mapped is equal to $p4672 - p4673/2$. The maximum actual value which can be mapped is equal to $p4672 + p4673/2$.		

p4674[0...n]	Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0		
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-10.0000 [V]	10.0000 [V]	0.0000 [V]
Description:	Sets the voltage when the connected sensor is at actual value zero. At this voltage channel B supplies an actual value of zero.		

p4675[0...n]	Analog sensor channel B voltage per encoder period / Ana_sens B U/per				
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4		
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-10.0000 [V]	10.0000 [V]	6.0000 [V]		
Description:	Sets the output voltage range to be mapped for the connected analog sensor. The voltage range is determined by the following parameters: - p4674 (voltage at actual value 0) - p4675 (voltage per encoder period)				
Note:	The minimum actual value which can be mapped is equal to p4674 - p4675/2. The maximum actual value which can be mapped is equal to p4674 + p4675/2.				
p4676[0...n]	Analog sensor range limit threshold / Ana_sens lim thr				
VECTOR_G, ENC	Can be changed: U, T	Calculated: -	Access level: 4		
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.0 [%]	100.0 [%]	100.0 [%]		
Description:	Sets the threshold for limit monitoring of the absolute actual value on the analog sensor. If this threshold is overshoot by the actual value of a channel, a corresponding fault/alarm (p4670.9) is output.				
Dependency:	Refer to: p4673, p4675				
p4677[0...n]	Analog sensor LVDT configuration / Ana_sens LVDT conf				
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4		
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration for LVDT mode on the analog sensor.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	LVDT ON	Yes	No	-
	01	Track B excitation	Yes	No	-
	02	Fixed value amplitude	Yes	No	-
	03	Fixed value amplitude and phase	Yes	No	-
p4678[0...n]	Analog sensor LVDT ratio / An_sens LVDT ratio				
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 4		
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -		
	P-Group: Encoder	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	0.00 [%]	200.00 [%]	50.00 [%]		
Description:	Sets the ratio for the LVDT sensor.				

2 Parameters

2.2 List of parameters

p4679[0...n]	Analog sensor LVDT phase / An_sens LVDT ph		
VECTOR_G, ENC	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-360.00 [°]	360.00 [°]	0.00 [°]
Description:	Sets the phase for the LVDT sensor.		

p4680[0...n]	Zero mark monitoring tolerance permissible / ZM_monit tol perm		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1000	4
Description:	Sets the permissible tolerance in encoder pulses for the zero mark distance in the context of zero mark monitoring. Causes fault F3x100 to appear less frequently.		
Dependency:	Refer to: F31100		

p4681[0...n]	Zero mark monitoring tolerance window limit 1 positive / ZM tol lim 1 pos		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1000	2
Description:	Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring. The pulse number is corrected if the deviation is less than this limit. If it is higher than this limit, fault F3x131 is triggered. If fault F3x131 is re-parameterized to an alarm (A) or no message (N), then the encoder pulses that are not corrected are transferred to the accumulator (p4688). The accumulator can be deactivated using p0437.7.		
Dependency:	Refer to: p0437, p4688 Refer to: F31131		
Note:	This monitoring is activated by setting p0437.2 = 1 (position actual value correction). The positive limit describes additional pulses due to EMC.		

p4682[0...n]	Zero mark monitoring tolerance window limit 1 negative / ZM tol lim 1 neg		
VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1001	0	-1001
Description:	Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring. The pulse number is corrected if the deviation is less than this limit. If it is higher than this limit, fault F3x131 is triggered. If fault F3x131 is re-parameterized to an alarm (A) or no message (N), then the encoder pulses that are not corrected are transferred to the accumulator (p4688). The accumulator can be deactivated using p0437.7.		
Dependency:	Refer to: p0437, p4681, p4688 Refer to: F31131		

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).
For a set value = -1001, the negated value of p4681 becomes active.
The negative limit describes the pulses lost due to a covered glass panel in the incremental encoder.

p4683[0...n] Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos

VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	100000	0

Description: Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.

Dependency: Refer to: p0437, p4681, p4682, p4688
Refer to: F31131, A31422

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).

p4684[0...n] Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg

VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-100001	0	-100001

Description: Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.

Dependency: Refer to: p0437, p4683, p4688
Refer to: F31131, A31422

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).
For a set value = -100001, the negated value of p4683 is effective.

p4685[0...n] Speed actual value mean value generation / n_act mean val

VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	20	0

Description: Sets the number of current controller sampling times for mean value generation of the speed actual value.

Note: Value = 0, 1: No mean value generation.
Higher values also mean higher dead times for the speed actual value.

p4686[0...n] Zero mark minimum length / ZM min length

VECTOR_G, ENC	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	10	1

Description: Sets the minimum length for the zero mark in 1/4 encoder pulses.

Dependency: Refer to: p0425, p0437

Note: The minimum length of the zero mark must be less than the zero mark distance (p4686 < p0425).
The parameter is activated using p0437.1 = 1 (zero mark edge detection).

p4688[0...2]	CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty		
VECTOR_G	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147483648	2147483647	0
Description:	Display and connector output for the identified incorrect pulses in lines. Also see p0437.7 (do not accumulate number of incorrect pulses).		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p0437, p4681, p4682, p4683, p4684		
Note:	The display can only be reset to zero.		
p4688	CO: Zero mark monitoring differential pulse count / ZM diff_pulse qty		
ENC	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer32	Dyn. index: -	Func. diagram: -

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147483648	2147483647	0
Description:	Display and connector output for the identified incorrect pulses in lines. Also see p0437.7 (do not accumulate number of incorrect pulses).		
Dependency:	Refer to: p0437, p4681, p4682, p4683, p4684		
Note:	The display can only be reset to zero.		
r4689[0...2]	CO: Squarewave encoder diagnostics / Sq-wave enc diag		
VECTOR_G	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the encoder status according to PROFIdrive for a squarewave encoder.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: A31422		
Note:	After alarm A3x422 is output, this parameter is set for 100 ms.		
r4689	CO: Squarewave encoder diagnostics / Sq-wave enc diag		
ENC	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Encoder	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the encoder status according to PROFIdrive for a squarewave encoder.		
Dependency:	Refer to: A31422		
Note:	After alarm A3x422 is output, this parameter is set for 100 ms.		

p4690		SMI spare part component number / SMI comp_no		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 1	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	399	0	
Description:	Sets the component number for the SMI/DQI for which motor and/or encoder data should be saved, deleted or downloaded.			
Dependency:	Refer to: p4691, p4692, p4693			
Note:	DQI: DRIVE-CLiQ Sensor Integrated SMI: SINAMICS Sensor Module Integrated			
p4691		SMI spare part save/download data / Save/DL SMI data		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	39	0	
Description:	Setting for the saving/downloading/deletion of motor and/or encoder data for the component specified in p4690 (SMI/DQI). A backup of this data can be saved to non-volatile memory. The backup procedure is performed automatically as part of the function for saving to non-volatile memory (p0977 = 1 or "Copy RAM to ROM"). If a part is replaced, the saved data can be reloaded. Procedure: p4690 = set component number p4691 = 1, 2, 30: Set the required procedure (save/download/delete). p4691 = 9, 10, 36: Feedback signal on successful completion of the procedure. p4691 = 11... 22, 37, 38: Error values if the procedure could not be executed successfully.			
Value:	0: Inactive 1: Save SMI data 2: Download SMI data 9: SMI data downloaded and POWER ON required for component 10: SMI data backup complete 11: SMI data backup for selected component not found 12: Selected component not available or not connected 13: Insufficient memory space for backup 14: Format of saved data is incompatible 15: Transfer fault during data download 16: Transfer fault during data backup 17: Data backup does not match parameterized encoder/motor 18: Data backup directory not permissible 19: Component already contains data 20: Component does not contain any data 21: Component is not an SMI or a DQI 22: SMI data cannot be downloaded for component 30: Delete SMI data 35: Confirmation of SMI data delete required 36: SMI data deleted and POWER ON required for component 37: Access level not sufficient for delete 38: Delete SMI data not permitted for component 39: SMI data for component cannot be deleted			
Dependency:	Refer to: p4690, p4692, p4693			
Notice:	Once SMI/DQI data has been deleted or downloaded successfully, the component has to be switched on (POWER ON).			

Note:

SMI: SINAMICS Sensor Module Integrated
 DQI: DRIVE-CLiQ Sensor Integrated

Help for error value = 11:
 - Save the data for the original SMI on the memory card.
 - Use an SMI with a suitable hardware version.

Help for error value = 12:
 - set the correct component number or connect the component.

Help for error value = 13:
 - Use a memory card with more memory space.

Help for error value = 14:
 - Create a data backup on the memory card corresponding to the SMI type.

Help for error value = 15:
 - check the DRIVE-CLiQ wiring for the component.

Remedy for fault value = 16:
 - check the DRIVE-CLiQ wiring for the component.

Help for error value = 17:
 - Save the data for the original SMI on the memory card.

Remedy for fault value = 18:
 - set parameter p4693 to an appropriate value.

Remedy for fault value = 19:
 - Perform an SMI delete or use a blank SMI.

Remedy for fault value = 20:
 - Use an SMI that is not blank.

Remedy for fault value = 21:
 - set the correct component number (p4690).

Note for error value = 22:
 - Data cannot be downloaded for component.

Remedy for fault value = 35:
 - Reset parameter p4691 to 30.

Remedy for fault value = 37:
 - set the access level to Expert or higher.

Help for error value = 38:
 - insert the SMI/DQI into the actual topology as an additional component (component number >= 200).
 - set the component number from the actual topology (p4690 >= 200).
 - set the correct component number (p4690 >= 200).

Note for error value = 39:
 - SMI already deleted or too old. Delete not possible.

p4692		SMI spare part save data of all SMIs / Save SMI data		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 1	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Displays, signals	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	29	0	
Description:	Setting to back up the data of all SMIs and DQIs featured in the target topology.			
Value:	0: Inactive 1: Save data of all SMIs and DQIs 10: Save all data successful 13: Insufficient memory space for backup 16: Transfer fault during data backup 20: Component does not contain any data 29: Not all components from target topology saved			

Note: SMI: SINAMICS Sensor Module Integrated
 p4692 = 10: Automatic on successful completion of backup procedure.
 p4692 = 13, 16, 20, 29: Error values if the procedure could not be executed successfully.
 The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed).
 Help for error value = 13:
 - Use a memory card with more memory space.
 Remedy for fault value = 16:
 - check the DRIVE-CLiQ wiring.
 Remedy for fault value = 20:
 - Use an SMI that is not blank.
 Help for error value = 29:
 - check and correct the target and actual topologies for the SMIs.
 - Repeat the save procedure.

p4693[0...1] **SMI spare part data backup directory / SMI dat_bkup dir**

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	399	0

Description: Sets the directory for downloading and saving data.
 Example:
 The SMI has the component number 5 and the SMI data (motor/encoder data) is to be stored in subdirectory C205.
 --> p4690 = 5, p4693[0] = 205, p4691 = 1

Index: [0] = Subdirectory selection
 [1] = Reserved

Dependency: Refer to: p4691, r4694

Notice: If p4693[0] is not equal to 0 and p4693[0] is not equal to p4690, the following applies:
 - Only a number >= 200 may be selected for the subdirectory when saving.
 - in the case of downloads, a selection for the subdirectory may only be made for an SMI/DQI with a component number >= 200 (preliminary component number) (p4690 >= 200).

Note: DQI: DRIVE-CLiQ Sensor Integrated
 SMI: SINAMICS Sensor Module Integrated
 For index [0]:
 This index is used to select the subdirectory for saving and downloading data. The motor article number (MLFB) of the corresponding data backup is displayed in r4694.
 For p4693[0] = 0, the following applies:
 The directory is determined by the setting of p4690.

r4694[0...19] **SMI spare part data backup motor article number / SMI dat_bkup MLFB**

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned8	Dyn. index: -	Func. diagram: -
	P-Group: Displays, signals	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the motor article number (MLFB) of the data backup selected with p4693.

Dependency: Refer to: p4691, p4692

Caution:  If the selected subdirectory contains a number of data sets, "More Datasets" is displayed in r4694[0...19].
 If there is no SMI data (motor/encoder data) in the selected subdirectory or if the selected subdirectory does not exist, the following applies:
 - the number of the next subdirectory located is displayed.
 - this subdirectory is not checked for valid SMI data.
 - if another subdirectory cannot be located, nothing is displayed in r4694[0...19].

2 Parameters

2.2 List of parameters

Note: SMI: SINAMICS Sensor Module Integrated

p4700[0...1]	Trace control / Trace control			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3

	0	1	0	
Description:	Setting to control the trace function.			
Value:	0: Stop trace 1: Start trace			
Index:	[0] = Trace 0 [1] = Trace 1			
p4701	Measuring function control / Meas fct ctrl			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	0	3	0	
Description:	Setting to control the measurement function.			
Value:	0: Stop measuring function 1: Start measuring function 2: Measuring function check parameterization 3: Start measuring function without enable signals			
p4703[0...1]	Trace options / Trace options			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	-	-	0000 bin	
Description:	Sets the options for the trace.			
Index:	[0] = Trace 0 [1] = Trace 1			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Automatically start trace with time slices	Yes	No
Dependency:	Refer to: p4700			
Note:	For bit 00: 0: The trace starts with p4700 as before. 1: When powering up, the trace starts immediately with the saved parameter settings with the start of the time slices.			

r4705[0...1]	Trace status / Trace status		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	6	-
Description:	Displays the actual status of the trace.		
Value:	0: Trace inactive 1: Trace is recording presamples 2: Trace is waiting for trigger event 3: Trace is recording 4: Recording (trace) ended 5: Trace inactive with permissible configuration data 6: Trace inactive with inadmissible configuration data		
Index:	[0] = Trace 0 [1] = Trace 1		
r4706	Measuring function status / Meas fct status		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	5	-
Description:	Displays the actual status of the measuring function.		
Value:	0: Measurement function inactive 1: Measuring function parameterization checked 2: Measuring function waits for stabilizing time 3: Measuring function recording (tracing) 4: Measuring function trace ended with error 5: Measuring function trace successfully completed		
p4707	Measurement function configuration / Meas fct config		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	1	0
Description:	Setting to configure the measurement function.		
Value:	0: Standard 1: Free measurement function		
Dependency:	The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).		
Note:	This parameter involves free measurement functions, and is only active for p4810 = 6. For value = 0: The free measuring function is parameterized with master control. For value = 1: The free measuring function is parameterized without master control.		

r4708[0...1]	Trace memory space required / Trace mem required		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the required memory in bytes for the actual parameterization.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: r4799		
r4709[0...1]	Trace memory space required for measuring functions / Trace mem required		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the required memory in bytes for the actual parameterization. This applies, if the trace for the measurement functions is used.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: r4799		
p4710[0...1]	Trace trigger condition / Trace Trig_cond		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 1	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 8	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 2
Description:	Sets the trigger condition for the trace.		
Value:	1: Immediate trace start 2: Positive edge 3: Negative edge 4: Entry to hysteresis band 5: Leaving hysteresis band 6: Trigger at bit mask 7: Start with function generator 8: Trigger at bit mask with edge		
Index:	[0] = Trace 0 [1] = Trace 1		
p4711[0...5]	Trace trigger signal / Trace trig_signal		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Selects the trigger signal for the trace.		
Index:	[0] = Trace 0 parameter in BICO format [1] = Trace 1 parameter in BICO format		

[2] = Trace 0 PINx with DO Id and chart Id
 [3] = Trace 0 PINx with block Id and PIN Id
 [4] = Trace 1 PINy with DO Id and chart Id
 [5] = Trace 1 PINy with block Id and PIN Id

Dependency:

Only effective when p4710 does not equal 1.

Note:

It only makes sense to trace the PINs using the commissioning tool.

For index 2(4) and 3(5) equal to zero, index 0(1) can only be written and vice versa.

For index [0...1]:

Here, the trigger signal for trace 0 or 1 is entered as parameter in the BICO format.

For trace with a physical address (p4789), the data type of the trigger signal is set here.

For index [2...3]:

The triggering PIN for trace 0 is entered here.

Index 2 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart

Index 3 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

For index [4...5]:

The triggering PIN for trace 1 is entered here.

Index 4 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart

Index 5 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

p4712[0...1]**Trace trigger threshold / Trace trig_thresh**

2 Parameters

2.2 List of parameters

p4715[0...1]	Trace bit mask trigger, bit mask / Trace trig mask		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the bit mask for the bit mask trigger.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 6 or p4710 = 8.		
p4716[0...1]	Trace bit mask trigger trigger condition / Trace Trig_cond		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the trigger condition for bit mask trigger.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 6.		
p4717	Measuring function number of averaging operations / Meas fct avg qty		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the number of averaging operations for the measuring function.		
p4718	Measuring function number of stabilizing periods / MeasFct StabPerQty		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the number of stabilizing periods for the measuring function.		
r4719[0...1]	Trace trigger index / Trace Trig_index		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trigger index in the trace buffer. The trigger event occurred at this point.		

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only valid when p4705 = 4.

p4720[0...1]	Trace recording cycle / Trace record_cyc		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -

-

Description:

Displays the trace buffer (record buffer) for trace 0 and signal 0.

The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks.

Example A:

The first 16384 values of signal 0, trace 0 are to be read out.

In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383].

Example B:

The values 16385 to 32768 from signal 0, trace 0 are to be read out.

In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].

Dependency:

Refer to: p4795

Dependency: Refer to: r4740, p4795

r4753[0...16383] Trace 1 trace buffer signal 3 floating point / Trace 1 rec sig 3

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 3.

Dependency: Refer to: r4740, p4795

r4754[0...16383] Trace 1 trace buffer signal 4 floating point / Trace 1 rec sig 4

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 4.

Dependency: Refer to: r4740, p4795

r4755[0...16383] Trace 1 trace buffer signal 5 floating point / Trace 1 rec sig 5

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 5.

Dependency: Refer to: r4740, p4795

r4756[0...16383] Trace 1 trace buffer signal 6 floating point / Trace 1 rec sig 6

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 6.

Dependency: Refer to: r4740, p4795

r4757[0...16383] Trace 1 trace buffer signal 7 floating point / Trace 1 rec sig 7

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 7.

Dependency: Refer to: r4740, p4795

r4760[0...16383] Trace 0 trace buffer signal 0 / Trace 0 rec sig 0

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.

Note: For signals, data type I32 or U32, the trace buffer is assigned as follows:

r4760[0] = value 0

r4760[1] = value 1

...

r4760[8191] = value 8191

For signals, data type I16 or U16, the trace buffer is assigned as follows:

r4760[0] = value 1 (bit 31 ... 16) and value 0 (bit 15 ... 0)

r4760[1] = value 3 (bit 31 ... 16) and value 2 (bit 15 ... 0)

...

r4760[8191] = value 16383 (bit 31 ... 16) and value 16382 (bit 15 ... 0)

For signals, data type I8 or U8, the trace buffer is assigned as follows:

r4760[0] = value 3 (bit 31 ... 24) value 2 (bit 23 ... 16) value 1 (bit 15 ... 8) value 0 (bit 7 ... 0)

r4760[1] = value 7 (bit 31 ... 24) value 6 (bit 23 ... 16) value 5 (bit 15 ... 8) value 4 (bit 7 ... 0)

...

r4760[8191] = value 32767 (bit 31 ... 24) value 32766 (bit 23 ... 16) value 32765 (bit 15 ... 8) value 32764 (bit 7 ... 0)

r4761[0...16383] Trace 0 trace buffer signal 1 / Trace 0 rec sig 1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 0 and signal 1.

Dependency: Refer to: r4760

r4762[0...16383] Trace 0 trace buffer signal 2 / Trace 0 rec sig 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 0 and signal 2.

Dependency: Refer to: r4760

2 Parameters

2.2 List of parameters

r4763[0...16383]	Trace 0 trace buffer signal 3 / Trace 0 rec sig 3			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -	
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 3.			
Dependency:	Refer to: r4760			
<hr/>				
r4764[0...16383]	Trace 0 trace buffer signal 4 / Trace 0 rec sig 4			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -	
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 4.			
Dependency:	Refer to: r4760			
<hr/>				
r4765[0...16383]	Trace 0 trace buffer signal 5 / Trace 0 rec sig 5			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -	
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 5.			
Dependency:	Refer to: r4760			
<hr/>				
r4766[0...16383]	Trace 0 trace buffer signal 6 / Trace 0 rec sig 6			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -	
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 6.			
Dependency:	Refer to: r4760			
<hr/>				
r4767[0...16383]	Trace 0 trace buffer signal 7 / Trace 0 rec sig 7			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -	
Description:	Displays the trace buffer (record buffer) for trace 0 and signal 7.			
Dependency:	Refer to: r4760			

r4770[0...16383] Trace 1 trace buffer signal 0 / Trace 1 rec sig 0			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 0.		
Dependency:	Refer to: r4760		
r4771[0...16383] Trace 1 trace buffer signal 1 / Trace 1 rec sig 1			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 1.		
Dependency:	Refer to: r4760		
r4772[0...16383] Trace 1 trace buffer signal 2 / Trace 1 rec sig 2			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 2.		
Dependency:	Refer to: r4760		
r4773[0...16383] Trace 1 trace buffer signal 3 / Trace 1 rec sig 3			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 3.		
Dependency:	Refer to: r4760		
r4774[0...16383] Trace 1 trace buffer signal 4 / Trace 1 rec sig 4			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 4.		
Dependency:	Refer to: r4760		

r4775[0...16383]	Trace 1 trace buffer signal 5 / Trace 1 rec sig 5		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 5.		
Dependency:	Refer to: r4760		

r4776[0...16383]	Trace 1 trace buffer signal 6 / Trace 1 rec sig 6		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 6.		
Dependency:	Refer to: r4760		

r4777[0...16383]	Trace 1 trace buffer signal 7 / Trace 1 rec sig 7		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the trace buffer (record buffer) for trace 1 and signal 7.		
Dependency:	Refer to: r4760		

p4780[0...1]	Trace physical address signal 0 / Trace PhyAddr Sig0		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin
Description:	Sets the physical address for the first signal to be traced. The data type is defined using p4730.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4781[0...1]	Trace physical address signal 1 / Trace PhyAddr Sig1		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin
Description:	Sets the physical address for the second signal to be traced. The data type is defined using p4731.		
Index:	[0] = Trace 0 [1] = Trace 1		
p4782[0...1]	Trace physical address signal 2 / Trace PhyAddr Sig2		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin
Description:	Sets the physical address for the third signal to be traced. The data type is defined using p4732.		
Index:	[0] = Trace 0 [1] = Trace 1		
p4783[0...1]	Trace physical address signal 3 / Trace PhyAddr Sig3		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin
Description:	Sets the physical address for the fourth signal to be traced. The data type is defined using p4733.		
Index:	[0] = Trace 0 [1] = Trace 1		
p4784[0...1]	Trace physical address signal 4 / Trace PhyAddr Sig4		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin
Description:	Sets the physical address for the fifth signal to be traced. The data type is defined using p4734.		
Index:	[0] = Trace 0 [1] = Trace 1		

2 Parameters

2.2 List of parameters

p4785[0...1]	Trace physical address signal 5 / Trace PhyAddr Sig5		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the sixth signal to be traced. The data type is defined using p4735.		
Index:	[0] = Trace 0 [1] = Trace 1		
<hr/>			
p4786[0...1]	Trace physical address signal 6 / Trace PhyAddr Sig6		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the seventh signal to be traced. The data type is defined using p4736.		
Index:	[0] = Trace 0 [1] = Trace 1		
<hr/>			
p4787[0...1]	Trace physical address signal 7 / Trace PhyAddr Sig7		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 1111 1111 1111 1111 1111 1111 1111 1111 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin
Description:	Sets the physical address for the eighth signal to be traced. The data type is defined using p4737.		
Index:	[0] = Trace 0 [1] = Trace 1		
<hr/>			
p4789[0...1]	Trace physical address trigger signal / Trace PhyAddr Trig		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0000 hex	Calculated: - Dyn. index: - Unit group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 hex
Description:	Sets the physical address for the trigger signal. The data type is defined by making the appropriate selection in p4711.		
Index:	[0] = Trace 0 [1] = Trace 1		

r4790[0...1]	Trace data type 5 traced / Trace rec type 5		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 5 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
r4791[0...1]	Trace data type 6 traced / Trace rec type 6		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 6 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
r4792[0...1]	Trace data type 7 traced / Trace rec type 7		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 7 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
r4793[0...1]	Trace data type 8 traced / Trace rec type 8		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the recorded data type 8 for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
p4795	Trace memory bank changeover / Trace mem changeov		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dyn. index: - Unit group: - Scaling: - Max 500	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Changes over the memory bank to read out the contents of the trace buffer.		
Dependency:	Refer to: r4740, r4741, r4742, r4743, r4750, r4751, r4752, r4753		

r4797[0...1]	Trace 0 trigger instant / Trace 0 t_trigger		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the instant in time for fulfilling the trigger condition for trace recorder 0. The time comprises milliseconds (index 0) and days (index 1).		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: r2114, r3102, r4719		
Notice:	The accuracy of the trigger instant depends on the accuracy of the underlying basis time. For clarification: The trigger instant is calculated with a μ s accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur. When referred to r4719, the trigger instant can therefore deviate somewhat.		
Note:	If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).		
r4798[0...1]	Trace 1 trigger instant / Trace 1 t_trigger		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the instant in time for fulfilling the trigger condition for trace recorder 1. The time comprises milliseconds (index 0) and days (index 1).		
Index:	[0] = Milliseconds [1] = Days		
Dependency:	Refer to: r2114, r3102, r4719		
Notice:	The accuracy of the trigger instant depends on the accuracy of the underlying basis time. For clarification: The trigger instant is calculated with a μ s accuracy. If the underlying basis time is only available with ms accuracy, then as a result of rounding effects, an inaccuracy of 1 ms can occur. When referred to r4719, the trigger instant can therefore deviate somewhat.		
Note:	If the time calculation of the drive can be synchronized with a higher-level control, then this time can be taken from the actual UTC time (r3102). Otherwise, the time is based on the system runtime (r2114).		
r4799	Trace memory location free / Trace mem free		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the free memory for the trace in bytes.		
Dependency:	Refer to: r4708		

p4800	Function generator control / FG control			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	0	3	0	
Description:	The function generator is started with p4800 = 1. The signal is only generated for a 1 signal of binector input p4819.			
Value:	0: Stop function generator 1: Start function generator 2: Check function generator parameterization 3: Start function generator without enable signals			
Dependency:	Refer to: p4819			
r4805	Function generator status / FG status			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Integer16	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	0	6	-	
Description:	Displays the actual status of the function generator.			
Value:	0: Inactive 1: Generate accelerating ramp to offset 2: Generate parameterized signal shape 3: Generate brake ramp 4: Function generator stopped due to missing enable signals 5: Function generator waits for BI: p4819 6: Function generator parameterization has been checked			
Dependency:	Refer to: p4800, p4819			
r4806.0	BO: Function generator status signal / FG status signal			
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -	
	P-Group: Trace and function generator	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 0	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the status of the function generator. 0 signal: Function generator inactive 1 signal: Function generator running			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	Bit 0	ON	OFF
				FP
				-

p4810	Function generator mode / FG operating mode		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	99	0
Description:	Sets the operating mode of the function generator.		
Value:	0: Connection at connector output r4818 1: Connection at current setpoint after filter and r4818 2: Connection as disturbing torque and r4818 3: Connection at speed setpoint after filter and r4818 4: Connection at current setpoint before filter and r4818 5: Connection at speed setpoint before filter and r4818 6: Connection for free measurement function r4818 and r4834 99: Connection at physical address and r4818		
p4812	Function generator physical address / FG phys address		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	4294967295	0
Description:	Sets the physical address where the function generator is to be connected.		
Dependency:	Only effective when p4810 = 99.		
p4813	Function generator physical address reference value / FG phys addr ref		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	1.00	1000000.00	1.00
Description:	Sets the reference value for 100 % for referred inputs.		
Dependency:	Only effective when p4810 = 99.		
p4815[0...2]	Function generator drive number / FG drive number		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	65535	0
Description:	Selects the required drive where the function generator is to be connected.		
Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection		
Dependency:	Only effective when p4810 = 1, 2, 3, 4 or 5.		
Note:	For the function generator, only type SERVO, VECTOR or DC_CTRL type drives can be used.		

p4816	Function generator output signal integer number scaling / FG outp integ scal		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: -	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-2147483648	2147483647	0
Description:	Sets the scaling for the integer number of the output signal for the function generator.		
Dependency:	Refer to: r4805, r4817		
Note:	The parameter can only be changed in the following operating states: r4805 = 0, 4, 6		
r4817	CO: Function generator output signal integer number / FG outp integ no.		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Display and connector output for the integer number of the output signal for the function generator.		
Dependency:	Refer to: p4816		
Note:	The value is output independent of the function generator operating mode.		
r4818	CO: Function generator output signal / FG outp_sig		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 0
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the output signal for the function generator.		
Dependency:	Refer to: p4810		
Note:	The value is displayed independently of the function generator mode.		
p4819	BI: Function generator control / FG control		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	1
Description:	Sets the signal source to control the function generator. When the function generator is running, signal generation is stopped with binector p4819 = 0 signal and p4800 is set = 0.		
Dependency:	Refer to: p4800		

p4820	Function generator signal shape / FG signal shape		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	1	5	1
Description:	Sets the signal to be generated for the function generator.		
Value:	1: Square-wave 2: Staircase 3: Delta 4: Binary noise - PRBS (Pseudo Random Binary Signal) 5: Sine-wave		
p4821	Function generator period / FG period duration		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.00 [ms]	60000.00 [ms]	1000.00 [ms]
Description:	Sets the period of the signal to be generated for the function generator.		
Dependency:	Ineffective when p4820 = 4 (PRBS).		
p4822	Function generator pulse width / FG pulse width		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.00 [ms]	60000.00 [ms]	500.00 [ms]
Description:	Sets the pulse width for the signal to be generated for the function generator.		
Dependency:	Only effective when p4820 = 1 (square-wave).		
p4823	Function generator bandwidth / FG bandwidth		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.0025 [Hz]	16000.0000 [Hz]	4000.0000 [Hz]
Description:	Sets the bandwidth for the signal to be generated for the function generator.		
Dependency:	Only effective when p4820 = 4 (PRBS). Refer to: p4830 Refer to: A02041		

p4824	Function generator amplitude / FG amplitude		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-1600.00 [%]	1600.00 [%]	5.00 [%]
Description:	Sets the amplitude for the signal to be generated for the function generator.		
Dependency:	Units are dependent on p4810. If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current). If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).		
p4825	Function generator 2nd amplitude / FG 2nd amplitude		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-1600.00 [%]	1600.00 [%]	7.00 [%]
Description:	Sets the second amplitude for the signal to be generated for the function generator.		
Dependency:	Only effective for p4820 = 2 (staircase). Units are dependent on p4810. If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current). If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).		
p4826	Function generator offset / FG offset		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-1600.00 [%]	1600.00 [%]	0.00 [%]
Description:	Sets the offset (DC component) of the signal to be generated for the function generator.		
Dependency:	Units are dependent on p4810. If p4810 = 1, 2, 4: The offset is referred to p2002 (reference current). If p4810 = 3, 5: The offset is referred to p2000 (reference speed). If p4810 = 2: In order to avoid the undesirable effects of play (backlash), the offset does not act on the current setpoint, but instead on the speed setpoint.		
p4827	Function generator ramp-up time to offset / FG ramp-up offset		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.00 [ms]	100000.00 [ms]	32.00 [ms]
Description:	Sets the ramp-up time to the offset for the function generator.		

2 Parameters

2.2 List of parameters

p4828	Function generator lower limit / FG lower limit		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-10000.00 [%]	0.00 [%]	-100.00 [%]
Description:	Sets the lower limit for the function generator.		
Dependency:	For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).		
p4829	Function generator upper limit / FG upper limit		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.00 [%]	10000.00 [%]	100.00 [%]
Description:	Sets the upper limit for the function generator.		
Dependency:	For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).		
p4830	Function generator time slice cycle / FG time slice		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.03125 [ms]	2.00000 [ms]	0.12500 [ms]
Description:	Sets the time slice cycle in which the function generator is called.		
p4831	Function generator amplitude scaling / FG amplitude scal		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0.00000 [%]	200.00000 [%]	100.00000 [%]
Description:	Sets the scaling for the amplitude of the signal waveforms for all output channels. The value can be changed while the function generator is running.		
p4832[0...2]	Function generator amplitude scaling / FG amplitude scal		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-340.28235E36 [%]	340.28235E36 [%]	100.00000 [%]
Description:	Sets the scaling for the amplitude of the signal waveforms separately for each output channel. The value cannot be changed while the function generator is running.		
Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection		

p4833[0...2]	Function generator offset scaling / FG offset scal		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min -340.28235E36 [%]	Max 340.28235E36 [%]	Factory setting 100.00000 [%]
Description:	Sets the scaling for the offset of the signal waveforms separately for each output channel. The value cannot be changed while the function generator is running.		
Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection		
r4834[0...4]	CO: Function generator free measurement output signal / FG fr MeasFct outp		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 0
	Min - [%]	Max - [%]	Factory setting - [%]
Description:	Displays the output signal for the free measurement function.		
Index:	[0] = Signal 1 [1] = Signal 2 [2] = Signal 3 [3] = Signal 4 [4] = Signal 5		
Dependency:	Refer to: p4810		
Note:	The signals are only output in the "free measurement function" operating mode (p4810 = 6)		
p4835[0...4]	Function generator free measurement function scaling / FG fr MeasFct scal		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min -200.00000 [%]	Max 200.00000 [%]	Factory setting 100.00000 [%]
Description:	Sets the scaling of the output signals for the free measurement function.		
Index:	[0] = Signal 1 [1] = Signal 2 [2] = Signal 3 [3] = Signal 4 [4] = Signal 5		
Note:	The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).		
p4840[0...1]	MTrace cycle number setting / Cycle number		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min 0	Max 4294967295	Factory setting 0
Description:	Sets the number of cycles of a multiple trace. The multiple trace is deactivated with a value = 0. The multiple trace is permanently activated for a value >= 100000.		

2 Parameters

2.2 List of parameters

Index:	[0] = Trace 0 [1] = Trace 1
Dependency:	Refer to: r4841, p4844 Refer to: A02097, A02098
Notice:	A multiple trace can have a negative impact on the total system performance. From their inherent principle of operation, flash memory cards are subject to wear as a result of write operations. As a consequence, the lifetime of flash memory cards is reduced when using the multiple trace functionality.

r4841[0...1]	MTrace cycle actual display / Cycle act display		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the currently running cycle (including deadtime) of the multiple trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: p4840, p4844		

p4844[0...1]	MTrace ring buffer files number / Ring buff file qty		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: Trace and function generator	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	10	10	10
Description:	Sets the number of ring buffer files for the measurement results of the multiple trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Refer to: p4840, r4841		

r4950	TEC DO-specific number / TEC DO qty		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	32	-
Description:	Number of Technology Extensions installed on this drive object.		
Dependency:	Refer to: r4951, r4952, r4955, p4956, r4957, r4958, r4959, r4960		
Note:	DO: Drive Object TEC: Technology Extension		

r4951	TEC DO-specific identifier total length / TEC DO ident tot_l		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	288	-
Description:	Displays the total length of the identifier of the Technology Extension installed on this drive object.		
Dependency:	Refer to: r4950, r4952, r4955, p4956, r4957, r4958, r4959, r4960		

Note: The identifier of a Technology Extension comprises a maximum of 8 characters plus separator.
TEC: Technology Extension

r4952	TEC DO-specific GUID total length / TEC DO GUID length		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	576	-
Description:	Displays the total length of the GUIDs of the Technology Extensions installed on this drive object.		
Dependency:	Refer to: r4950, r4951, r4955, p4956, r4957, r4958, r4959, r4960		
Note:	The GUID of a Technology Extension comprises 16 characters plus 1 character major information plus 1 character, minor information. GUID: Globally Unique Identifier TEC: Technology Extension		

r4955[0...n]	TEC DO-specific identifier / TEC DO ident		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: r4951	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the identifier of the Technology Extensions installed on this drive object. r4955[0...8]: Identifier of Technology Extension 1 r4955[9...17]: Identifier of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, p4956, r4957, r4958, r4959, r4960		
Notice:	This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).		
Note:	TEC: Technology Extension		

p4956[0...n]	TEC DO-specific activation / TEC DO act		
All objects	Can be changed: C1, T	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: r4950	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Setting to activate the Technology Extensions installed on this drive object. r4956[0]: Activation of Technology Extension 1 r4956[1]: Activation of Technology Extension 2, ...		
Value:	0: Technology Extension inactive 1: Technology Extension active		
Dependency:	Refer to: r4950, r4951, r4952, r4955, r4957, r4958, r4959, r4960		
Notice:	This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).		
Note:	TEC: Technology Extension		

r4957[0...n]	TEC DO-specific version / TEC DO Version		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4950	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4294967295	-
Description:	Displays the version of the Technology Extensions installed on this drive object. r4957[0]: Version of Technology Extension 1 r4957[1]: Version of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4958, r4959, r4960		
Notice:	This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		
r4958[0...n]	TEC DO-specific interface version / TEC DO interf_ vers		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4950	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the interface version of Technology Extensions installed on this drive object. r4958[0]: Interface version of Technology Extension 1 r4958[1]: Interface version of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4959, r4960		
Notice:	This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		
r4959[0...n]	TEC DO-specific GUID / TEC DO GUID		
All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: r4952	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the GUIDs of the Technology Extensions installed on this drive object. r4959[0...15]: GUID of Technology Extension 1 r4959[16]: Major information of Technology Extension 1 r4959[17]: Minor information of Technology Extension 1 r4959[18...33]: GUID of Technology Extension 2 r4959[34]: Major information of Technology Extension 2 r4959[35]: Minor information of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4960		
Notice:	This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).		
Note:	TEC: Technology Extension		

r4960[0...n]	TEC DO-specific GUID drive object / TEC DO GUID DO		
All objects	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4952 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of this drive object of the Technology Extensions installed on the memory card/device memory. r4960[0...15]: GUID of this drive object of Technology Extension 1 r4960[16]: Major information of this drive object of Technology Extension 1 r4960[17]: Minor information of this drive object of Technology Extension 1 r4960[18...33]: GUID of this drive object of Technology Extension 2 r4960[34]: Major information of this drive object of Technology Extension 2 r4960[35]: Minor information of this drive object of Technology Extension 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4959		
Notice:	This parameter is only indexed if at least one drive object-specific Technology Extension exists (p4950 > 0).		
Note:	TEC: Technology Extension		
p4961[0...n]	TEC DO-specific logbook module selection / TEC DO log module		
All objects	Can be changed: T Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min 0000 hex	Calculated: - Dyn. index: r4950 Unit group: - Scaling: - Max FFFF FFFF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Only for service purposes.		
Note:	TEC: Technology Extension		
r4975	TEC invalid number / TEC inval qty		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of invalid Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4976, r4978, r4979		
Note:	TEC: Technology Extension		
r4976	TEC invalid identifier total length / TEC inval ID tot_l		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: - Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the total length of the IDs of all the invalid Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4975, r4978, r4979		
Note:	TEC: Technology Extension The identifier of an invalid Technology Extension comprises a maximum of 8 characters plus separator.		

r4978[0...n]	TEC invalid identifier / TEC inval ID		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: r4976	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the IDs of all the invalid Technology Extensions installed on the memory card/device memory. r4978[0...8]: Identifier of invalid Technology Extension 1 r4978[9...17]: Identifier of invalid Technology Extension 2, ...		
Dependency:	Refer to: r4975, r4976, r4979		
Notice:	This parameter is only indexed if at least one invalid Technology Extension exists (p4975 > 0).		
Note:	TEC: Technology Extension		
r4979[0...n]	TEC invalid error code / TEC inv error code		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4975	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the error code of the invalid Technology Extensions installed on the memory card/device memory. r4979[0]: error code from Technology Extension 1 r4979[1]: error code from Technology Extension 2, ...		
Dependency:	Refer to: r4975, r4976, r4978		
Notice:	This parameter is only indexed if at least one invalid Technology Extension exists (p4975 > 0).		
Note:	TEC: Technology Extension The value in the error code must be interpreted in binary form. The bits have the following meaning: Bit 00: Incompatible version of the TEC interface. Bit 01: Technology Extension could not be loaded. Bit 02: Incorrect description files. Bit 03: Technology Extension does not define a CPU type. Bit 04: Technology Extension for this device not available (incorrect CPU type). Bit 05: Technology Extension for this device not available (incorrect type ID). Bit 06: Incorrect description files (Const/Startup incompatible). Bit 07: Number range of the Technology Extension overlaps with the number range of another Technology Extension Bit 08: No compatible custom interface was found. Bit 09: The custom interface defined by the Technology Extension already exists. Bit 10: The version of the System Technology Extension differs from the SINAMICS firmware version.		
r4985	TEC number / TEC qty		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	32	-
Description:	Displays the number of Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4993, r4994		
Note:	TEC: Technology Extension		

r4986	TEC identifier total length / TEC ident tot_I		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	288	-
Description:	Displays the total length of the IDs of all the Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4985, r4987, r4988, r4989, r4990, r4991, r4992, r4993, r4994		
Note:	TEC: Technology Extension The identifier of a Technology Extension comprises a maximum of 8 characters plus separator.		
r4987	TEC GUID total length / TEC GUID tot_Igth		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dyn. index: -	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	576	-
Description:	Displays the total length of the GUIDs of all the Technology Extensions installed on the memory card/device memory.		
Dependency:	Refer to: r4985, r4986, r4988, r4989, r4990, r4991, r4992, r4993, r4994		
Note:	The GUID of a Technology Extension comprises 16 characters plus 1 character major information plus 1 character, minor information. GUID: Globally Unique Identifier TEC: Technology Extension		
r4988[0...n]	TEC identifier / TEC ident		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned8	Dyn. index: r4986	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the IDs of all the Technology Extensions installed on the memory card/device memory. r4988[0...8]: Identifier of Technology Extension 1 r4988[9...17]: Identifier of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4989, r4990, r4991, r4992, r4993, r4994		
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).		
Note:	TEC: Technology Extension		
r4989[0...n]	TEC version / TEC version		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4985	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the version of all the Technology Extensions installed on the memory card/device memory. r4989[0]: Version of Technology Extension 1 r4989[1]: Version of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4990, r4991, r4992, r4993, r4994		
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).		

2 Parameters

2.2 List of parameters

Note: TEC: Technology Extension
Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4990[0...n]	TEC interface version / TEC interf_vers		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4985 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the interface version of all the Technology Extensions installed on the memory card/device memory. r4990[0]: Interface version of Technology Extension 1 r4990[1]: Interface version of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4991, r4992, r4993, r4994		
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).		
Note:	TEC: Technology Extension Example: The value 1010100 should be interpreted as V01.01.01.00.		

r4991[0...n]	TEC GUID / TEC GUID		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4987 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of all the Technology Extensions installed on the memory card/device memory. r4991[0...15]: GUID of Technology Extension 1 r4991[16]: Major information of Technology Extension 1 r4991[17]: Minor information of Technology Extension 1 r4991[18...33]: GUID of Technology Extension 2 r4991[34]: Major information of Technology Extension 2 r4991[35]: Minor information of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4992, r4993, r4994		
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).		
Note:	TEC: Technology Extension		

r4992[0...n]	TEC GUID ES / TEC GUID ES		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dyn. index: r4987 Unit group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the GUIDs of all the Technology Extensions installed on the memory card/device memory. r4992[0...15]: GUID of Technology Extension 1 r4992[16]: Major information of Technology Extension 1 r4992[17]: Minor information of Technology Extension 1 r4992[18...33]: GUID of Technology Extension 2 r4992[34]: Major information of Technology Extension 2 r4992[35]: Minor information of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4993, r4994		

Notice: This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).

Note: TEC: Technology Extension

r4993[0...n]	TEC activation status / TEC act stat		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer16	Dyn. index: r4985	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	-
Description:	Displays the activation status of the Technology Extensions installed on the memory card/device memory. r4993[0]: Activation of Technology Extension 1 r4993[1]: Activation of Technology Extension 2, ...		
Value:	0: Technology Extension inactive 1: Technology Extension active		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4994		
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).		
Note:	TEC: Technology Extension		

r4994[0...n]	TEC properties / TEC property				
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4		
	Data type: Unsigned32	Dyn. index: r4985	Func. diagram: -		
	P-Group: OEM range	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the properties of all the Technology Extensions installed on the memory card/device memory. r4994[0]: Property of Technology Extension 1 r4994[1]: Property of Technology Extension 2, ...				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Properties diagnostics bit 0	Yes	No	-
	01	Properties diagnostics bit 1	Yes	No	-
	02	Properties diagnostics bit 2	Yes	No	-
	03	OEM	No	Yes	-
	04	Properties diagnostics bit 4	Yes	No	-
	05	Properties diagnostics bit 5	Yes	No	-
	06	Properties diagnostics bit 6	Yes	No	-
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4989, r4990, r4991, r4992, r4993				
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).				
Note:	TEC: Technology Extension The parameter is only for internal Siemens diagnostics.				

r4995[0...n]	TEC external version / TEC ext version		
CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dyn. index: r4985	Func. diagram: -
	P-Group: OEM range	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the external version of all the Technology Extensions installed on the memory card/device memory. r4995[0]: External version of Technology Extension 1 r4995[1]: External version of Technology Extension 2, ...		
Dependency:	Refer to: r4985, r4986, r4987, r4988, r4990, r4991, r4992, r4993, r4994		
Notice:	This parameter is only indexed if at least one Technology Extension exists (p4985 > 0).		

2 Parameters

2.2 List of parameters

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p5271[0...n]	Online / One Button Tuning configuration / Ot OBT config				
VECTOR_G (J_estimator / OBT)	Can be changed: T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: -	Unit group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 0000 bin		
Description:	Sets the configuration for online tuning / One Button Tuning.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	02	Load adaptation Kp	Yes	No	5045
	06	Do not change Kp	Yes	No	-
Note:	For bit 02: The estimated load moment of inertia is taken into account for the speed controller gain (see p5273).				
	For bit 06: The speed controller gain set in p1460 is not changed when calculating the controller data.				

p5310[0...n]	Moment of inertia precontrol configuration / J_est config				
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -		
	P-Group: Motor	Unit group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Configuration of the moment of inertia precontrol when the moment of inertia estimator is active.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activating calculations	Yes	No	-
	01	Activating the moment of inertia precontrol	Yes	No	-
Dependency:	The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function.				
	Refer to: r5311, p5312, p5313, p5314, p5315				
Note:	Possible bit combinations:				
	Bit 1, 0				
	= 0, 0 --> function not active				
	= 0, 1 --> cyclic calculation of the coefficients without moment of inertia precontrol (commissioning)				
	= 1, 0 --> moment of inertia precontrol activated (without cyclic calculation of the coefficients)				
	= 1, 1 --> moment of inertia precontrol activated (with cyclic calculation of the coefficients)				
	For bit 00:				
	Calculation for the constant and linear coefficients of the moment of inertia precontrol is activated. The results are written to parameters (p5312, p5313, p5314, p5315).				
	For bit 01:				
	The moment of inertia precontrol is activated.				
	The moment of inertia is calculated from the currently measured load torque and the saved coefficients (p5312, p5313, p5314, p5315).				

r5311[0...n]	Moment of inertia precontrol status word / J_prectrl ZSW			
VECTOR_G (J_estimator / OBT)	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	-	
Description:	Displays the status word for the moment of inertia precontrol.			
Bit field:	Bit	Signal name	1 signal	0 signal
	00	New measuring points are available	Yes	No
	01	New parameters being calculated	Yes	No
	02	Moment of inertia precontrol active	Yes	No
	03	Calculation of positive coefficients completed	Yes	No
	04	Calculation of negative coefficients completed	Yes	No
	05	Results are being written to parameter	Yes	No
Dependency:	The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function. Refer to: p5310, p5312, p5313, p5314, p5315			
p5312[0...n]	Moment of inertia precontrol linear positive / J_est lin pos			
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Motor	Unit group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-340.28235E36 [s ²]	340.28235E36 [s ²]	0.000000 [s ²]	
Description:	Sets the linear coefficients for moment of inertia precontrol in the positive direction when the moment of inertia estimator is active. The estimated moment of inertia is obtained according to the following formula: Moment of inertia (J) = linear coefficient (p5312) * load torque + constant coefficient (p5313)			
Dependency:	The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function. Refer to: p5310, r5311, p5313, p5314, p5315			
p5313[0...n]	Moment of inertia precontrol constant positive / J_est const pos			
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3	
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -	
	P-Group: Motor	Unit group: 25_1	Unit selection: p0100	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-340.28235E36 [kgm ²]	340.28235E36 [kgm ²]	0.000000 [kgm ²]	
Description:	Sets of the constant coefficients for moment of inertia precontrol in the positive direction when the moment of inertia estimator is active. The estimated moment of inertia is obtained according to the following formula: Moment of inertia (J) = linear coefficient (p5312) * load torque + constant coefficient (p5313)			
Dependency:	The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function. Refer to: p5310, r5311, p5312, p5314, p5315			

2 Parameters

2.2 List of parameters

p5314[0...n]	Moment of inertia precontrol linear negative / J_est lin neg		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [s ²]	340.28235E36 [s ²]	0.000000 [s ²]
Description:	Sets the linear coefficients for moment of inertia precontrol in the negative direction when the moment of inertia estimator is active. The estimated moment of inertia is obtained according to the following formula: Moment of inertia (J) = linear coefficient (p5314) * load torque + constant coefficient (p5315)		
Dependency:	The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function. Refer to: p5310, r5311, p5312, p5313, p5315		
p5315[0...n]	Moment of inertia precontrol constant negative / J_est const neg		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Motor	Unit group: 25_1	Unit selection: p0100
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36 [kgm ²]	340.28235E36 [kgm ²]	0.000000 [kgm ²]
Description:	Sets the constant coefficients for moment of inertia precontrol in the negative direction when the moment of inertia estimator is active. The estimated moment of inertia is obtained according to the following formula: Moment of inertia (J) = linear coefficient (p5314) * load torque + constant coefficient (p5315)		
Dependency:	The function module "Moment of inertia estimator" (r0108.10) must be activated for the "Moment of inertia precontrol" function. Refer to: p5310, r5311, p5312, p5313, p5314		
p5316[0...n]	Moment of inertia precontrol change time moment of inertia / J_precontrl t_ch J		
VECTOR_G (J_estimator / OBT)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dyn. index: DDS, p0180	Func. diagram: -
	P-Group: Closed-loop control	Unit group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	10.00 [ms]	5000.00 [ms]	500.00 [ms]
Description:	Sets the change time for the moment of inertia for the moment of inertia precontrol. Lower values mean that faster changes are possible. For a higher value, this estimated value is smoothed more significantly.		
Dependency:	Refer to: p1400, p1560, p1562		
p5350[0...n]	Mot_temp_mod 1/3 boost factor at standstill / Standst boost_fact		
VECTOR_G	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dyn. index: MDS, p0130	Func. diagram: 8017
	P-Group: Motor	Unit group: -	Unit selection: -
	Not for motor type: ASM, SESM, REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0000	2.0000	2.0000
Description:	Sets the boost factor for the copper losses at standstill for motor temperature models 1 and 3. The entered factor is active for speed n = 0 [rpm]. This factor is linearly reduced down to 1 between speeds n = 0 ... 1 [rpm].		

The following values are required to calculate the boost factor:

- stall current (I₀, p0318, catalog value)
- thermal stall current (I_{th0}, catalog value)

The boost factor is calculated as follows:

$$- p5350 = (I_0 / I_{th0})^2$$

Dependency:

Refer to: p0318, p0612, p5390, p5391

Refer to: F07011, A07012, A07014

Notice:

When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note:

Temperature model 1 (I2t):

The following applies for firmware version < 4.7 SP6 or p0612.8 = 0:

- parameter p5350 is not active. Internally, a fixed boost factor of 1.333 is used as basis for the calculation.

The following applies from firmware version 4.7 SP6 and p0612.8 = 1:

- parameter p5350 becomes active as described above.
